0. About this document and how to review it

Purpose
How the document is organised
Requirement IDs
How to review
Questions and items we need from you
Review rounds and sign-off

1. Overview

1.1 Why 10-4 is building its own TMS
1.2 Goals
1.3 What is included
1.4 Not included in the first version
1.5 Users
1.6 Glossary
1.7 Planned for later, by area

2. Users and Roles

2.1 The kinds of user
2.2 Rules that always apply
2.3 Permission matrix
Who can do what

3. End-to-End Workflows

How to read this section
Workflow 1: LTL quote, book and auto-dispatch
Workflow 2: Truckload (including Auto Transport): book, cover, rate confirmation, carrier e-sign
Workflow 3: Pickup, in transit, delivery and POD
Workflow 4: Carrier bill, approve, QuickBooks, paid
Workflow 5: Customer invoice, send, QuickBooks, payment, aging
Workflow 6: Carrier replacement and TONU
Workflow 7: Customer portal (customer quotes, books, tracks)
Workflow 8: Account setup and onboarding
Workflow 9: E-mails and notifications across the lifecycle
Who can do what (workflow view)

4.1 Navigation, Dashboard and Search

4.1.1 Application frame and left navigation
Task queues and counters
The "+" add menu
Profile menu and footer
4.1.2 Dashboard

4.1.3 Find ("Find anything...") and global search
Who can do what

4.2 Shipments

Part A. Shipments list and work queues

Shipments list
Work queues

Part B. Create, edit and duplicate a shipment

Form header
Customer
Equipment
Locations
Items to be shipped
Cost & price
Other form blocks, saving and errors
Edit and duplicate

Part C. Shipment detail page

Part D. Actions menu and lifecycle

Who can do what

4.3 Carrier Cover and Rate Confirmation

Cover drawer (choosing the carrier)
Carrier leads
Cover form
What happens when you cover
Removing or replacing a carrier, and TONU
Rate confirmation page (broker)
Carrier confirmation page (carrier, secure link)
Who can do what

4.4 Tracking, Pickup and Delivery

Locations section on the shipment page
Appointments
Recording events on a stop
Tracking updates, log, edit, delete and undo
Late and at-risk warnings
Driver details
Automatic tracking through Trucker Tools
Queues: Confirm pickups and Confirm deliveries
Proof of delivery (POD)
LTL loads
What customers see
Who can do what

4.5 Billing and payments

- Bills & Invoices (work area)
- Carrier bill page
- Bills & Invoices: invoice side
- Bulk "Send invoices"
- Customer invoice page
- Sending an invoice
- Payments
- Customer Invoices page and statements
- Credit, aging and disputes
- Late invoices board
- Who can do what

4.6 LTL quoting

- 4.6.1 The "Get quotes" form
- 4.6.2 Quote results
- 4.6.3 Booking a quote
- 4.6.4 Truckload quotes and booking (short)
- 4.6.5 Quote history and "Shipments to quote"
- 4.6.6 LTL carrier accounts ("Carrier integrations")
- Who can do what

4.7 Customers

- Customers list
- Customer page
- Other customer functions
- Rules for who sees a customer
- Who can do what

4.8 Carriers and vendors

- Carriers and vendors list
- Adding a carrier
- Carrier profile
- Factoring company directory
- Adding a vendor
- Vendor profile
- Who can do what

4.9 Reports, Lanes and Commissions

- Reporting hub
- Report builder (shipment, customer and carrier reports)
- Lanes
- Commissions report
- Who can do what

4.10 Settings, Users, Account, Profile and Sign-in

4.10.1 Settings home and shared page frame
4.10.2 Carriers settings
Load boards
4.10.3 Customers settings
4.10.4 Accounting settings
4.10.5 External references
4.10.6 Notifications
4.10.7 Data page
4.10.8 Users
4.10.9 Teams
4.10.10 Company profile
4.10.11 Your profile
4.10.12 Sign-in, sign-out, invite and password pages
Who can do what

4.11 Customer portal and secure links
4.11.1 The customer portal
4.11.2 Secure links
Who can do what

4.12 Notifications and Live Updates
Sidebar badges and counters
Live updates
Share status marks
Messages
Notification settings
Who can do what

5. E-mails
How e-mail works in the system
Catalogue at a glance
BOL and labels
Carrier e-mails
Customer e-mails
Carrier packet
Users and sign-in
E-mails that are not sent by the system
Who can do what

6. Documents
Rules for all generated documents
Bill of Lading (BOL)
Shipping labels
Customer rate confirmation
Carrier rate confirmation
Customer invoice

Customer statement
Shipment Documents page
Who receives what
Who can do what

7. Integrations

Trucker Tools (truckload tracking)
LTL carriers (direct integrations)
QuickBooks Online (accounting)
Government carrier lookup (FMCSA)
Maps, distance and addresses
E-mail sending
File storage
Load boards (DAT, Truckstop)
MyCarrierPackets (carrier onboarding)
Not included and why
Who can do what

8. Data Migration from Quote Factory

Approval and method
What comes over, and what does not
The Import from Quote Factory screen (Owner only)
Checking the result
Switching over
QuickBooks link-up
Rollback
What 10-4 must decide or approve
Who can do what

Appendix B. Statuses and Option Lists

B.1 Shipment statuses
B.2 Quote and quote-request statuses
B.3 Carrier assignment and rate confirmation
B.4 Tracking
B.5 Carrier bills
B.6 Customer invoices
B.7 Payments
B.8 Carriers and vendors
B.9 LTL carrier accounts
B.10 Equipment types (70, in 13 groups)
B.11 Stops and freight
B.12 Services (pickup, delivery and additional)
B.13 Carrier charge types
B.14 Reference number types (41)
B.15 Documents
B.16 Roles

B.17 Queues and list tabs

Appendix C. Report columns

C.1 Shipment report (189 columns)

C.2 Customer report (68 columns)

C.3 Carrier report (31 columns)

0. About this document and how to review it

Document	10-4 TMS — Functional Specification
Prepared for	10-4 Global Logistics
Prepared by	Stackup Solutions
Version	0.1 (first draft for review)
Status	Draft — waiting for client review

Purpose

This document describes everything the new **10-4 TMS** will do: every screen, button, field, rule, e-mail, document and outside connection. It is written so that 10-4 can check, before sign-off, that nothing is missing and that everything works the way the team needs.

If something you use today is not described here, or is described differently from how you want it, please tell us. That is exactly what this review is for.

How the document is organised

Part	What it covers
1. Overview	Why the system is being built, what is included, what is not, and the words we use
2. Users and roles	Who uses the system and what each person can see and do
3. Workflows	The main jobs from start to finish (quote → book → cover → deliver → bill → get paid)
4. Modules (4.1 – 4.12)	Every screen and feature in detail
5. E-mails	Every e-mail the system sends: when, to whom, and what it contains
6. Documents	Every PDF the system creates: BOL, labels, rate confirmations, invoices, statements
7. Integrations	Every outside service (Trucker Tools, LTL carriers, QuickBooks, …) and what 10-4 needs to provide
8. Data migration	How 10-4's data moves from Quote Factory into the new system
Appendix B	Every status and option list, with exact labels
Appendix C	Every column available in the report builders

Each module starts with a short **"In short"** summary. A shorter companion document, *10-4 TMS — Summary*, lists every capability in one line each with its ID; this specification holds the full detail behind those IDs.

Requirement IDs

Every requirement has a short ID, for example **SHP-014 · Duplicate a shipment**. The letters show the area:

Prefix	Area	Prefix	Area
ROL	Users and roles	LTL	LTL quoting
WF	Workflows	CUS	Customers
NAV / DSH / SRC	Navigation, dashboard, search	CAR / VND	Carriers, vendors
SHP	Shipments	RPT / LAN / COM	Reports, lanes, commissions
COV / RCF	Carrier cover, rate confirmation	SET / USR / ACT	Settings, users, account
TRK	Tracking, pickup and delivery	POR / LNK	Customer portal, secure links
BIL / INV / PAY	Carrier bills, customer invoices, payments	NTF	Notifications
EML	E-mails	DOC	Documents
INT	Integrations	MIG	Data migration

Please quote the ID when you comment. It lets us find and change the exact item quickly.

How to review

1. Read the parts that matter most to your team first (usually 3 Workflows and 4 Modules).
2. Add a comment next to anything that is wrong, missing or should work differently. Start the comment with the ID, for example: *"SHP-014: duplicating should also copy the reference numbers."*
3. Use one of these labels to make your intent clear:
   - **Change**: it should work differently.
   - **Add**: something is missing.
   - **Remove**: we do not need this.
   - **Question**: something is unclear.
4. Send the document back to us. We will answer every comment, update the document and send a new version with a list of what changed.
5. We repeat this until you are happy. Then you sign off the final version.

Questions and items we need from you

The few decisions only 10-4 can make, and the items we need from 10-4, are listed in section 9 of *10-4 TMS — Summary*.

1. Overview

> **In short:** 10-4 TMS is 10-4 Global's own Transportation Management System. It replaces Quote Factory for day-to-day brokerage work: quoting, booking, covering loads with carriers, tracking, documents, carrier bills, customer invoices, reports and the customer portal. The team finds the same screens, buttons and words they use today, so they can switch without retraining.

1.1 Why 10-4 is building its own TMS

- **Cost:** Quote Factory's price went from $200 to $500 per month and is expected to reach about $1,000.
- **Support:** help is slower (the chat was removed; support is by e-mail only).
- **Control:** Quote Factory cannot be connected to 10-4's own tools and will not build what 10-4 needs (for example an assistant that checks extra carrier charges).
- **Search and reports:** the team wants back the free keyword search across shipments, and more columns in reports.

1.2 Goals

1. Run all of 10-4's brokerage work in one system that 10-4 owns.
2. Keep the way of working the team knows: same screens, labels and order of steps.
3. Connect directly to Trucker Tools (tracking), each of 10-4's LTL carriers (rates and pickups) and QuickBooks Online (accounting).
4. Bring over existing Quote Factory data, so history, open loads, open bills and open invoices continue without a gap.
5. Build a base 10-4 can extend later (assistants, new tools, a lighter version for partner brokerages).

1.3 What is included

Area	Section
Users, roles and permissions	2
End-to-end workflows	3
Navigation, dashboard and keyword search	4.1
Shipments: list, work queues, create, edit, duplicate, detail, cancel	4.2
Truckload cover: carrier leads, rate confirmation, carrier e-sign, carrier replacement / TONU	4.3
Tracking, pickup and delivery, POD	4.4
Carrier bills, customer invoices, payments, statements, aging	4.5

Area	Section
LTL quoting, booking and automatic pickup requests	4.6
Customers, contacts, address book, reps, margins, credit	4.7
Carriers and vendors	4.8
Reports, report builder, lanes, commissions report	4.9
Settings, users and teams, company account, profile, sign-in	4.10
Customer portal and secure links	4.11
Notifications and live updates	4.12
E-mails	5
Documents (BOL, labels, rate confirmations, invoices, statements)	6
Integrations	7
Moving data from Quote Factory	8

1.4 Not included in the first version

Item	Why
Quote Factory's Xtended Network LTL rates	They belong to Quote Factory's own carrier network. 10-4 uses its own carrier accounts and pricing.
project44	Quote Factory's connection to the carriers. The new system connects to each of 10-4's LTL carriers directly.
Pathfinder	A Quote Factory tool (messaging carriers on similar lanes and trucks posted on DAT). Not needed now; can be built later.
Posting loads to DAT, Truckstop or Central Dispatch from the TMS	10-4 posts by hand today. Can be added later.
MyCarrierPackets connection	10-4 uses it on its own; it was not connected inside Quote Factory either. Carrier onboarding uses the built-in carrier packet. Planned for later.
Automatic entry of carrier invoices from the accounting mailbox	Later phase.
Assistant that checks and disputes extra carrier charges	Later phase. The "Variance" shown on a carrier bill (BIL-018) is the base for it.
Automated rate negotiation and outreach to new LTL carriers	Later phase.
Direct data access for 10-4's own tools (secure API and an AI assistant connector)	Later phase.
A lighter version for partner brokerages	Later phase; the system is designed so it can be added.

Item	Why
Boat Haul division	Later; the system is designed so it can be added.
Support chat (Quote Factory's Help Scout)	Not needed.
Training courses (Quote Factory's TalentLMS)	Low priority; later.
Commission runs (approve and pay commission statements)	The first version gives the Commissions report (download); the run workflow can be added later.

Smaller items planned for later are listed by area in section 1.7.

1.5 Users

- **10-4 staff:** Owners (full control, including accounting approvals and settings) and Members (day-to-day work).
- **Customers:** contacts of 10-4's customers with portal access to quote, book and track their own LTL shipments.
- **Carriers:** dispatchers and drivers who receive secure links to review and sign rate confirmations. No account needed.

Details in section 2.

1.6 Glossary

Term	Meaning
Shipment / load	One job of moving freight for a customer, identified by its BOL number.
TL (Truckload)	A full truck for one customer, picked up and delivered directly.
LTL (Less Than Truckload)	Smaller freight (usually 1–4 pallets, sometimes up to 6) that shares a truck; handled by LTL common carriers.
Auto Transport	Moving vehicles on car-hauler trailers; handled like truckload, each vehicle (and its VIN) listed as an item.
Customer / shipper	The company that hires 10-4 to move its freight and pays 10-4.
Carrier	The trucking company that moves the freight and is paid by 10-4.
Vendor	Any other service provider on a load (towing, crane, warehouse, etc.).
Cover	Assigning a carrier to a truckload shipment at an agreed cost.
Carrier lead	A carrier suggested for a load, usually because it moved similar lanes before.
Rate confirmation (rate con)	The agreement sent to the carrier: pickup, delivery, agreed rate, terms and fees. The carrier signs it online and adds driver details.
BOL (Bill of Lading)	The shipping document signed at pickup and delivery.

Term	Meaning
POD (Proof of Delivery)	The BOL signed at delivery.
PRO number	The LTL carrier's tracking/invoice number for a shipment.
Accessorial	An extra service or charge (liftgate, residential delivery, detention, reweigh, ...).
TONU	"Truck ordered, not used": a fee paid to a carrier whose truck was booked but not used.
Detention / layover	Charges for a truck waiting longer than allowed / staying overnight.
Freight class / NMFC	The LTL classification of goods that drives the price.
Cost / price / margin	Cost = what 10-4 pays the carrier; price = what the customer pays 10-4; margin = the difference as a percentage of price.
Carrier bill	The carrier's invoice to 10-4 for the freight.
Customer invoice	10-4's invoice to the customer.
Factoring company	A company a carrier sells its invoices to; 10-4 then pays it.
Remittance	The note a customer sends with a payment, saying which invoices it pays.
Rep	A 10-4 sales person assigned to a customer; may earn a commission.
Secure link	A link e-mailed to someone outside 10-4 (carrier or customer) that opens one page without an account. Valid 42 days; each new send renews it (LNK-001 to LNK-003).
QuickBooks Online	10-4's accounting system; bills and invoices are sent to it automatically, and a reported payment marks them paid (INT-025 to INT-035).
Trucker Tools	The tracking service that follows the driver's phone or ELD.

1.7 Planned for later, by area

These items are not in the first version. They can be added after go-live. Some items appear under more than one area.

2. Users and Roles

- Per-module roles beyond Owner and Member (for example a billing-only role).
- Extra rights for team managers.
- Limiting customers to their assigned reps (ROL-019).
- Agent or agency teams with their own branded login.
- A company switcher for users who belong to more than one company.

3. End-to-End Workflows

- Booking a house (manual) LTL quote.
- Driver chat messages in TMS.

- Refused or partial delivery, damage and claims handling.
- Vehicle condition reports and photos for Auto Transport.
- Posting loads to load boards (10-4 posts by hand).
- Connecting MyCarrierPackets (Descartes; its carrier portal is "MyCarrierPortal"); onboarding uses 10-4's own packet wizard.
- Merging the invoice and the POD into one PDF.

4.1 Navigation, Dashboard and Search

- Training, support chat and Ops Desk links in the navigation.
- A "Commissions" link in the navigation (only the one-shot Commissions report in Reports is included).
- A sidebar queue link and counter for carriers waiting for approval (the page "Approve & review carriers" itself is included, section 4.8).
- A red lock in Find results for customers limited to certain reps (with ROL-019).
- Dashboard banners for system messages, announcements and alerts.
- Street-level map tiles (the first version draws routes on a plain map of the United States).
- Light, dark and system color themes.

4.2 Shipments

- A second freight carrier on one shipment with a separate set of stops for each (multi-leg). Carrier replacement works through "Drop carrier" (section 4.3).
- LTL edit form re-pricing: after a booked LTL shipment is changed, banners such as "Some things have changed that could affect the cost.", "Quote is no longer available" (with the button "Get new quotes"), "Cost increased by $X, margin went down to N%. You may want to adjust the price.", "Cost decreased by $X, margin went up to N%." and "Great! The cost stayed the same. Looks like it's good to go."
- Per-item commodity pick list and extra shipment-form fields from external references (account-level reference definitions).
- Requiring a customer contact to book, with the "Can't book when email matches brokerage user." check.
- Locking cost and price for non-Owners once the load is complete.
- Driver messages (chat) on the detail page.
- Mexico settlement (neighborhood) fields on a stop.
- Booking several identical shipments at once.

4.3 Carrier Cover and Rate Confirmation

- **QuickPay** option on the carrier confirmation page (the "Request QuickPay" switch and net amount).
- **Several carriers on one load** (each with its own Cover card and lead list); the first version has one carrier per load. A dropped carrier's TONU is shown as its own card (COV-029).
- **Share window details:** the Opened / Unopened marks inside the carrier rate confirmation Share window, and editing a contact from that window.
- **Route map image** on the carrier page.
- **Tracking invitation box** on the carrier page ("Track with Trucker Tools" and the text asking the driver to send tracking updates), shown when the tracking connection is not set up.

- **View-only link row** in the share window (shows the rate confirmation without sending an e-mail).
- **Recording a phone confirmation** when a carrier never signs.

4.4 Tracking, Pickup and Delivery

- Driver chat and driver-message toast for Trucker Tools (driver comments), with the "Driver Messages" row in notification settings.
- Live truck position (breadcrumbs) on the map.
- Longer list of Trucker Tools tracking statuses (for example "Driver needs app", "Phone turned off", "Tracking interrupted") once Trucker Tools provides its full list.
- Automatic "Picked up" and "Delivered" from Trucker Tools.
- Automatic proof of delivery pulled from LTL carriers.

4.5 Billing and payments

- **Automatic booking hold:** stop new bookings for a customer when an invoice is 31 days overdue, with an account option and an Owner re-enable. (Credit figures are always shown; blocking a booking above the available credit is the Owner setting "Enforce credit limits", off at go-live; see PAY-022, SET-020.)
- **Weekly past-due payment requests** by e-mail to customers (schedule by day, hour and time zone).
- **Pay carriers faster** ("QuickPay" discounts) and **factoring of 10-4's own invoices** (sending invoices to a factoring company, "imminent" payments, notices of assignment). 10-4 does not use these today, so the work area has no "Invoices to Factor" tab. The carrier remit-to factoring choice (BIL-013) is included.
- **Late fees** on customer invoices.
- **Credit memos, write-offs and refunds**, and a "credit and re-bill" step for replacing a sent invoice (INV-025).
- **A separate second bill** from the same carrier on the same load (BIL-036), if 10-4 asks for it.
- **A single merged invoice PDF** (invoice, bill of lading and POD in one file); today the POD files are attached separately (INV-013).
- **Extra approval step when a carrier's or a bill's remit-to address or factoring company changes** (CAR-039).
- **Automatic entry of carrier invoices** from the accounting mailbox, and an **assistant that checks and disputes extra carrier charges** (base: the variance banner, BIL-018).

4.6 LTL quoting

- Booking a manual LTL quote (the "house quote" of LTL-052). "Book" stays disabled until the pickup and cover path for a quote with no carrier is agreed with 10-4.
- Automatic repricing when pickup details change after quoting: the banners on the shipment edit form after "Update cost" (see 4.2). In the first version the lane is locked on the book page and a changed lane needs new quotes.
- Estimated weight from volume, customer default freight class and NMFC, and "force customer to freight class and NMFC" (optional customer settings).
- Address-validation chips on the quote form (location type and liftgate warnings).
- Per-customer visibility limits on quote requests.

4.7 Customers

- Customer list tabs "Active", "Leads", "Dormant" and "All" (booked in the last 90 days, never booked, quiet 90 days or more).
- A "Late invoices" banner and a "Late" column in the customers list. (The "Late invoices" board itself is included, CUS-055.)
- "Owned by another rep" page that hides a customer from users who are not assigned to it, and enforcing the "Customer visibility" setting (CUS-053).
- "Freight class auto-calculated" and "Default NMFC" settings per customer (with the weight estimator, 4.6).
- Scheduled past-due notification e-mails per customer.
- A "Contact required to book" rule.

4.8 Carriers and vendors

- A sidebar row "Approve carriers" with a count of carriers waiting for approval. The "Approve & review carriers" view itself is included (CAR-007).
- **MyCarrierPackets** (Descartes; carrier portal "MyCarrierPortal"), RMIS and Highway connected to the carrier list and the status (badges "Pass", "Fail", "Do Not Use", "Pending" and "Send to carrier" on cards, a Compliance tab on the carrier profile with authority, safety, insurance and watchdog details, and automatic approval). Not connected in the first version, as in Quote Factory.
- Confirmation (approve, deny, reset) of contacts that a carrier adds itself.
- A screen to edit the factoring company directory.
- Pulling a carrier packet automatically from a connected compliance service.

4.9 Reports, Lanes and Commissions

- **Commission runs** (preview what each rep has earned up to a date, approve per shipment, mark as paid, add adjustments, review paid runs). Only the one-off Commissions report is included; runs only if 10-4 asks.
- **Lane areas by metro region** instead of city and state, and a map with state borders and zoom controls.
- **External reference columns** in reports. They appear only if 10-4 starts using external reference codes.

4.10 Settings, Users, Account, Profile and Sign-in

- **Posting loads to DAT or Truckstop from the system** and connecting those accounts from the Load boards page; today the page only shows status.
- **Booking hold** tile in Customers settings (automatic hold at 31 days overdue, see 4.5).
- **Commission trigger** tile in Accounting settings (commission counted when "Invoiced" or "Paid"); depends on the commissions run workflow.
- **Driver Messages** in Notifications (from Trucker Tools).
- **Self-service connection** of tracking and compliance tools; today Stackup connects them.
- **Account-wide control of who may upload and approve bills** as Settings switches (ROL-021).
- **Payment instructions on invoices** (bank details and accepted payment methods) as an Owner setting; today Stackup sets them.
- **Editing the carrier agreement** inside the system.

- **Customer visibility limits** taking effect in customer lists, Find and quoting (ROL-019); the switch is saved now but has no effect.
- **QuickPay** for carriers (the setting is saved, SET-029).
- Theme switching (light, dark, system; see 4.1).

4.11 Customer portal and secure links

- A public tracking link for customers and consignees that shows live position without signing in (today customers track from the shipment page and the shipment link).
- Customers editing or cancelling a shipment request, or converting a request to a quote by themselves.
- Export of quote history for customers.
- Customers paying invoices online (payments stay outside the portal).
- Customer-visible credit details and a credit request button.
- Agent or agency branding and agency-level logins (see section 2).
- A different wording for 10-4's terms and login e-mail.

4.12 Notifications and Live Updates

- Trucker Tools driver messages: a pop-up when a driver writes to the broker and the "Driver Messages" switch in the Notifications window (with driver chat, 4.4).
- Clock-driven counter updates (a badge changing exactly at midnight without any other change).
- Staff announcements and "New feature" banners.

5. E-mails

- Notice of assignment e-mail for factored invoices (10-4 does not factor).
- E-mail to the broker when a carrier confirms a load.
- E-mail when a customer credit limit is raised.
- E-mails from driver messages (Trucker Tools chat).
- QuickPay request from the carrier page (QuickPay is not used).

6. Documents

- Barcodes on the BOL and labels.
- Printing an account number and a quote number on the BOL.

7. Integrations

- MyCarrierPackets connection for carrier onboarding (INT-049).
- Booking a manual (house) LTL quote (INT-024).
- Direct accounts for carriers that came only through Xtended Network, if 10-4 opens them (INT-022).
- Training for new hires (built-in course or link to 10-4's own training).
- A carrier-outreach feature (message carriers from lane history).
- Load-board posting (DAT, Truckstop, Central Dispatch) from 10-4 TMS.

8. Data Migration from Quote Factory

- Pulling later changes automatically on a schedule (imports are started by an Owner).
- Importing old e-mail logs and old secure-link pages.
- Importing notes, load history, carrier leads, packet links, invoice send records and earlier carrier assignments, if 10-4 asks for them (MIG-041).

2. Users and Roles

> **In short:** two kinds of staff user, **Owner** and **Member**, plus two outside kinds: **customers** (customer portal) and **carriers** (secure links). This section says who they are, how they join and sign in, and what each can do. Screens for sign-in, invites, users and teams are in section 4.10.

2.1 The kinds of user

ROL-001 Two staff roles

Every staff person has exactly one role: **Owner** or **Member**. It shows as a chip on the profile ("Owner" in orange, "Member" in grey) and as the "Owner" pill in the Users list. There is no third staff role.

ROL-002 Owner

An Owner can do everything a Member can do, and also:

- change company settings (all pages under Settings),
- invite, remove and change the role of users, and manage teams,
- edit the company profile and logo,
- approve or reject carriers, set carrier payment terms and tax details,
- set customer credit limits, customer payment terms and customer booking permission,
- merge, archive and restore customers,
- change commissions on a shipment (amounts, "paid" status) and download the Commissions report,
- edit or delete the base reports, and share reports with users and teams,
- add and edit LTL carrier accounts,
- run the data import from Quote Factory (section 8).

Owners are not held to the Members' margin and profit limits (ROL-020). Owner rights apply to the whole company; there is no per-module Owner.

ROL-003 Member

A Member works shipments, quotes, customers, carriers, bills and invoices daily and can read most settings but not change them. Owner-only pages and buttons are hidden or read-only (ROL-023).

ROL-004 Customer portal user

A contact of one customer company, signed in with a one-time e-mailed link (no password, ROL-011). They land on the quote form and see only their own company's quotes, shipments and invoices. Customers never see Find, queues, Customers, Carriers, Settings, Bills & Invoices or Reporting. See section 4.11.

ROL-005 Carrier through a secure link

A carrier has no account or password. It opens a secure link e-mailed by 10-4 and can only do what that link is for:

- review and sign a rate confirmation,
- complete a carrier packet (documents and insurance),
- read the carrier terms and conditions.

A link opens one item only. A wrong, expired or taken-back link shows the same "not found" page. See section 4.11.

ROL-006 Invited user

A person who has been sent an invite but has not joined. Shown in the Users list under "Invited", with no access until they accept (ROL-009). The invite is bound to its e-mail address and expires after 14 days.

ROL-007 One company

The system serves one company, 10-4 Global. There is no company switcher and no self-service sign-up for new companies.

2.2 Rules that always apply

ROL-008 Permissions are enforced by the system

The system checks the user's role on every action, not only by hiding buttons. An Owner-only action tried by a Member (for example via a typed web address) is refused and no data changes. Customers reach only customer-portal pages; a staff page typed into the address bar shows "Page not found".

ROL-009 How a person joins by invite

1. An Owner types an e-mail in the Users page and presses "Invite". The system sends an invite e-mail.
2. The person opens the link in the e-mail ("{name} invites you to join the team at {company}").
3. A new person fills in "First name", "Last name", "Email", "Phone" and "Password" and presses "Save". The e-mail must be the one the invite was sent to; otherwise the message is "This invite was sent to {e-mail}".
4. The "Join {company}" page shows. The person presses "Agree & join", or "Decline".
5. After "Agree & join" the person lands on the Dashboard with the role the Owner chose.

A person who already has a login sees "Continue" instead of the sign-up form. Screens and messages: ACT-014 to ACT-021.

ROL-010 Staff sign-in

Staff sign in with e-mail and password on the "Log in" page, then land on the page they were trying to reach, or the Dashboard. A wrong e-mail or password always gives the same message, "Wrong email or password.", so it never reveals whether an e-mail exists. After too many wrong attempts: "Too many attempts. Try again in a minute."

ROL-011 Customer sign-in

Customers sign in from the customer login link (Settings > Customers > "Customer login"; see POR-005). They enter their e-mail and receive a one-time sign-in link, valid 15 minutes and usable once, sent only to contacts of a customer with login access. The page gives the same answer for every address, so it never reveals access. There is no code to type. See section 4.11.

ROL-012 Forgotten password

"Forgot password?" on the "Log in" page starts a reset. A reset link is sent if the e-mail belongs to a user who can log in, and the same "Check Your Email" page always shows. The link works 60 minutes, once only. After a reset every session of that user is signed out. Screens: ACT-023, ACT-024.

ROL-013 Changing your own password

Any staff user can change their password on their profile with the current and a new password. The new password needs a lowercase letter, an uppercase letter, a number, a special character, and at least 8 characters. Sessions on other devices are then signed out; the current one stays.

ROL-014 Sessions

A user stays signed in until they log out, change their password, or are removed from the company (access ends on their next click).

ROL-015 Changing a role

An Owner can switch another user between Owner and Member from the user's card ("Owner" switch). Rules:

- An Owner cannot change their own role. Message: "You cannot change your own role."
- The company must always have at least one Owner. Message: "An account needs at least one Owner."
- An Owner can also set the role of a pending invite before the person joins.

ROL-016 Removing a user

An Owner can remove another user ("Remove user" after "Are you sure you want to remove {name}?"). The person loses access and leaves their teams; their name stays on past shipments, notes and history. An Owner cannot remove themselves ("You cannot remove yourself.").

ROL-017 Teams

Teams are named groups of staff (for example a regional sales team). Only Owners create, rename and delete teams and add or remove people. Team names must be unique ("A team with that name already exists"). A team cannot be deleted while it has people ("Remove every person from the team first.") or while it is the assigned rep on a customer or shipment ("This team is assigned as a rep and cannot be removed."). Teams are used when:

- assigning reps to customers and shipments (a team can be picked as a rep),
- limiting who can see a customer, in a later version (ROL-019),
- limiting who can see a saved report (section 4.9).

ROL-018 Team manager

On a team, an Owner can mark a member as "Manager". Managers show with an orange "Manager" strip on their card. In the first version a manager has the same permissions as any other Member.

ROL-019 Customer visibility

Settings > Customers > "Customer visibility" holds the account switch "Limit customer visibility" (off today); Owners can change it and the choice is saved. **In the first version the switch changes nothing:** every Owner and Member can open every customer. Limiting customers to their assigned reps (people, or members of a rep team) is planned for later.

ROL-020 Margin and profit limits for Members

"Margin defaults and limits" (Settings > Customers) sets a minimum margin, minimum profit and maximum profit for LTL and Truckload quotes, account-wide, per customer and per LTL carrier account. A Member cannot book a quote or shipment outside the limits; the refusal names the limit. Owners are only warned and can proceed. Drafts are not checked. See SHP-077, SHP-078.

ROL-021 Accounting rights option

Two company options (set up with Stackup, not on a Settings page) can restrict accounting to Owners; both are off by default, so Members can do all of these:

- "Only Owners can upload and edit carrier bills".
- "Only Owners can approve and pay bills and record customer payments".

ROL-022 Adding customers option

A company option (set up with Stackup, off by default) can restrict "Add customer" to Owners. When on, Members do not see the "+" for adding customers and are told to contact the account owner.

ROL-023 What a Member sees on Owner-only screens

- Settings pages open, but switches and fields are read-only (grey), and Owner-only buttons are hidden.
- Users: no "Invite" box, no role switches, no remove buttons. Teams: no "+" and no create button.
- Company: a read-only summary instead of the edit form.
- Carrier integrations: no "+ Add carrier".
- Import and Commissions report pages show "Page not found".
- On a shipment, the commission amounts and "paid" switch are hidden.

ROL-024 Who sees what in the shipment timeline

Commission and rep-change entries in a shipment timeline are visible to Owners only. Members never receive them.

2.3 Permission matrix

ROL-025 **Permission matrix**

This is the home of who-can-do-what; the system enforces it (ROL-008).

Legend: **Yes** = allowed. **Read** = can see, cannot change. **Own** = only the customer's own records. **No** = not available. **Link** = only through the matching secure link.

Navigation, dashboard, search, account

Capability	Owner	Member	Customer	Carrier
Dashboard	Yes	Yes	No (goes to Quote form)	No
Find (global search)	Yes	Yes	No	No
Sidebar queue counters	Yes	Yes	No	No
Own profile (name, photo, phone, e-mail)	Yes	Yes	Yes	No
Change own password	Yes	Yes	No (no password)	No
Settings pages	Edit	Read	No	No
Company profile and logo	Edit	Read	No	No
Invite, remove users, change roles	Yes	No	No	No
Create and edit teams, add or remove team members	Yes	No	No	No
See the list of users and teams	Yes	Yes	No	No
Data import	Yes	No	No	No

Shipments and quotes

Capability	Owner	Member	Customer	Carrier
See shipment list and detail	Yes	Yes	Own	Link (rate confirmation only)
Create, edit, duplicate, book a shipment	Yes	Yes (within margin limits)	Request a Truckload shipment only	No
Cancel and un-cancel a shipment	Yes	Yes	No	No
Change customer on a shipment	Yes	Yes (unless "Enforce credit limits" is on and the customer has a credit limit, SHP-071)	No	No
See cost, margin, profit	Yes	Yes	No (price only)	No

Capability	Owner	Member	Customer	Carrier
Book above or below margin limits	Yes (warned)	No	No	No
Assign reps to a shipment	Yes	Yes	No	No
Set or change commission on a shipment, mark "paid"	Yes	No	No	No
Cover a load with a carrier, send rate confirmation	Yes	Yes	No	No
Override a rejected carrier at cover	Yes	No	No	No
Sign a rate confirmation	No	No	No	Link
Quote form, results, quote history (LTL)	Yes	Yes	Own	No
Share a quote by e-mail or link	Yes	Yes	No	No
Book from a quote	Yes	Yes	Own, if the customer allows booking	No
Documents (BOL, labels, POD, confirmations)	Yes	Yes	Own (BOL, labels, POD)	Link (rate confirmation)

Customers and carriers

Capability	Owner	Member	Customer	Carrier
View customers, contacts, address book	Yes	Yes	No	No
Add and edit a customer, contacts, address book	Yes	Yes	No	No
Customer payment terms, booking on/off, accounting instructions	Yes	No	No	No
Customer credit limit and credit note	Yes	No	No	No
Merge, archive, restore a customer	Yes	No	No	No
Customer-specific margin and limits	Yes	Yes (read only for limits that apply to them)	No	No
View carriers and vendors	Yes	Yes	No	No
Add a carrier or vendor	Yes	Yes	No	No
Approve or reject a carrier ("Don't use this carrier")	Yes	No	No	No
Carrier payment terms, tax and legal entity, "Requires 1099"	Yes	No	No	No

Capability	Owner	Member	Customer	Carrier
Request a carrier packet	Yes	Yes	No	No
Complete a carrier packet	No	No	No	Link
LTL carrier accounts (add, edit, switch on or off)	Yes	Read	No	No

Billing

Capability	Owner	Member	Customer	Carrier
See Bills & Invoices	Yes	Yes	Invoices page, own	No
Upload and edit a carrier bill	Yes	Yes (unless restricted, ROL-021)	No	No
Approve a carrier bill, record payments	Yes	Yes (unless restricted, ROL-021)	No	No
Create, send, dispute a customer invoice	Yes	Yes	No	No
Record a customer payment	Yes	Yes (unless restricted, ROL-021)	No	No
View and download own invoices	Yes	Yes	Own	No

Reports, lanes, commissions

Capability	Owner	Member	Customer	Carrier
Run reports, export to CSV	Yes	Yes	No	No
Create your own report ("Save as new")	Yes	Yes	No	No
Edit or delete a base report	Yes	No	No	No
Share a report with users and teams	Yes	No	No	No
Lanes map and table	Yes	Yes	"Data" (no profit columns)	No
Commissions report (one-shot CSV)	Yes	No	No	No
Late invoices board (see section 4.5)	Yes	Yes	No	No
"Data" page: download all shipments as a CSV file (Settings / Data)	Yes	Yes	No (customers have their own "Data" lanes page)	No

Settings (detail in section 4.10)

Capability	Owner	Member	Customer	Carrier
Carriers settings: terms, rate confirmation e-mail, Terms & Fees, packet request, monitoring links	Edit	Read	No	No
Customers settings: margins, carrier-name hiding, customer login, credit limits, visibility	Edit	Read	No	No

Capability	Owner	Member	Customer	Carrier
Accounting settings: QuickBooks, Cc invoices, payment terms, factoring, QuickPay	Edit	Read	No	No
External references (definitions)	Edit	Read	No	No
External reference values on a customer or carrier	Yes	Yes	No	No
Notifications (in-app alerts, per user)	Yes	Yes	No	No
"Load boards" tile (shows whether DAT and Truckstop are connected; posting loads from the system is not in the first version)	See only (Owners)	Not shown	No	No

Who can do what

See the matrix above. **Owner:** all settings, users, teams, approvals, credit, commissions and report administration. **Member:** daily work; read-only on settings. **Customer:** own company only, through the portal. **Carrier:** one secure link at a time, no account.

3. End-to-End Workflows

> **In short:** The nine main business stories of 10-4 TMS, from quote to payment: who does what, what the system does by itself, and what happens when something goes wrong. Screens, fields and rules are in the modules (section 4 and sections 5 to 8); each step names where its detail lives.

How to read this section

- Workflows: 1 LTL quote, book and auto-dispatch; 2 Truckload; 3 Pickup, in transit, delivery and POD; 4 Carrier bill; 5 Customer invoice; 6 Carrier replacement and TONU; 7 Customer portal; 8 Account setup and onboarding; 9 E-mails and notifications.
- Each workflow has a step table and requirements `WF-001` and up (automatic behavior and exceptions).
- "Rep" means a 10-4 staff user (Owner or Member). "Owner" is named only for Owner-only actions.
- Detail lives in sections 4.2 to 4.12, 5 E-mails, 6 Documents, 7 Integrations; Appendix B lists every status and option list.
- Shipment statuses: **Requested, Booked, Scheduled, In transit, Delivered**, and **Canceled** (from Booked, Scheduled or In transit; a Requested shipment cannot be canceled). 10-4 described its pipeline as "Upcoming, Booked, Scheduled, In Transit, Delivered"; the first status in the system is Requested. When "Scheduled" happens: SHP-075.

```
Quote -> Book -> Cover / auto-dispatch -> Pick up -> In transit -> Deliver -> POD
         Booked   Scheduled               In transit              Delivered
Delivered -> Carrier bill -> Approve -> QuickBooks -> Paid
          -> Customer invoice -> Send -> QuickBooks -> Paid
```

Workflow 1: LTL quote, book and auto-dispatch

Rep or customer (portal) enters the shipment; all LTL carrier accounts rate it at once; 10-4's margin is added; one price is booked; the system requests the pickup and e-mails BOL and labels. **Who:** Rep, Customer, LTL carriers (through 10-4's accounts). **Detail:** 4.6, 4.2, 4.7 (margins), 4.11, 5, 6, 7.

#	Who	What happens	Detail
1	Rep or Customer	Quote form; request created with the applicable margin (customer margin or account default 25 percent), distance and transit days.	4.6
2	System	All active LTL carrier accounts rate at once; a carrier that cannot rate shows an error row (for example "Carrier does not service this lane") without stopping the others; identical quotes: only the cheaper shows.	4.6
3	Rep	Tunes margin, profit, price; hides a row; adds a house quote. Members cannot go below the minimum margin or profit (SHP-077, SHP-078). Cost is staff-only.	4.6

#	Who	What happens	Detail
4	Rep	"Share quotes", "Email these quotes" or "Copy link" (view-only). Secure link e-mailed (subject "Quotes for <origin city, ST> → <destination city, ST>"; LNK-001). Customer never sees cost or margin.	4.6, 5
5	Customer	Opens the link, compares, **Book**. Banners warn if the price changed or the quote is gone.	4.11
6	Rep or Customer	Contacts, hours, references, "Share BOL" per stop, notes; customer ticks the Customer Terms checkbox. Checks: pickup date not past, quote not expired, customer allowed to book.	4.2
7	Rep or Customer	**Book shipment** (customer: "Book for $X"). Shipment **Booked**; quote request completed; BOL, labels and invoice draft created; BOL and labels e-mailed to each stop with "Share BOL" on.	5, 6
8	System	"Auto dispatch" on: pickup request sent ("Auto dispatching..."); on acceptance the carrier's pickup number is stored and the shipment becomes **Scheduled** (SHP-075).	4.6
9	System	Carrier feed events show on the shipment (reps can add them, Workflow 3). **Track** opens the carrier's page with the PRO, pickup or BOL number.	4.4

WF-001 LTL booking creates everything in one step

Booking a quote creates the shipment, completes the quote request, generates BOL and labels and starts auto-dispatch, with no separate steps.

WF-002 Auto-dispatch outcome

- The shipment stays **Booked** until the carrier accepts the pickup request, then becomes **Scheduled**.
- "Auto dispatch" off: the request stays in draft and the rep sees the manual bar.
- Carrier rejects or the call fails: the page shows "Pickup request failed" and the manual bar.
- Manual bar: "Pickup #", "PRO #", **Auto dispatch** (retry), **Done**. A rep who booked by website or phone types the pickup number and presses **Done**; the card reads "Dispatched" and the shipment becomes Scheduled.
- Pickup requests go to any carrier account an Owner has connected and activated. LTL has no carrier-approval step.

WF-003 Who can book, and when booking is blocked

Booking is blocked with a visible reason when: booking is switched off for the customer ("Booking disabled"); the quote expired or expires before pickup; the pickup date passed ("Pickup date has passed"); the price changed ("Some things have changed that could affect the price" with **Update price**, or "Quote is no longer available" with **Get new quotes**); or a Member's margin or profit is outside limits. With a credit limit, the book page shows "Credit available $X" or "No credit". Blocking for insufficient credit ("Insufficient credit to book this quote") applies only when "Enforce credit limits" is on (PAY-022, SET-020); it is off at go-live.

WF-004 Re-quote and stale pages

Changing a request's criteria replaces the old prices. An old share link shows "These are old quotes" with **See latest quotes**. If two people edit the same request, the second sees "Previous changes detected" with **Reload quote request**.

WF-005 Save for later

Save for later on the book page keeps a draft shipment (Requested). **Book** on the results page later opens the draft. A Requested shipment cannot be canceled; the rep books it or deletes the draft.

WF-006 Cancel after the carrier has the pickup

Canceling a shipment with an accepted pickup request asks for a second confirmation and shows the carrier's cancel contact ("Contact the carrier to cancel the pickup!"). The system does not cancel the pickup at the carrier.

WF-007 House (manual) LTL quotes

House quotes are never shown to customers and cannot be booked in the first version; booking them is planned for later.

Workflow 2: Truckload (including Auto Transport): book, cover, rate confirmation, carrier e-sign

The rep books the shipment (a truckload can also start as a quote request with manual quotes, 4.6), covers it with a carrier, and the system e-mails a rate confirmation that the carrier signs; tracking then starts. **Who:** Rep, Owner (approvals, overrides), Carrier dispatcher (no login). **Detail:** 4.2, 4.3, 4.8, 4.4, 5, 6, 7.

#	Who	What happens	Detail
1	Rep	New shipment form (mode Truckload; equipment for example Dry Van, Reefer, Flatbed, Auto Transport, Open Auto Transport, Enclosed Auto Transport; items are vehicles for Auto Transport; "Share BOL" per stop). **Book shipment** or **Save for later**. Shows the lane history bar ("History $X"); creates **Booked** shipment, BOL, invoice draft and carrier leads; sends BOL e-mail if the BOL switch is on.	4.2
2	Rep	**Cover** queue (earliest pickup first), **Cover** on a load. Carriers that quoted come first, then lowest cost, then lane history.	4.3
3	Rep	Reviews cards (approval dot Approved, Candidate, Don't use; safety rating; cost pill); adds a carrier with "+ add lead by MC or DOT".	4.3, 4.8
4	Rep	Records the call: dispatcher name, phone, e-mail (required), equipment and partial, rate con note, cost lines, "Track" switch. Lead becomes quoted.	4.3
5	Rep	**Cover**, **Cover & request packet** or **Cover & send rate con**. Shipment becomes **Scheduled** now, not at signing (SHP-075); an approved carrier gets the rate confirmation at once.	WF-008
6	Carrier	Secure link (subject "Confirm Load ", link "View rate confirmation"; LNK-001): reads Terms and Fees, enters driver name, phone, tractor, trailer, typed signature (first and last name), ticks the carrier agreement if required, **Confirm shipment**. Records who, when, terms version; reopening shows "Load accepted"; with an agreement the carrier gets a signed copy.	4.3, 5
7	System	"Track" on: tracking record at cover (pill "Awaiting rate con"); after signing the driver phone goes to the tracking service, which texts the driver a link. Pill: "Awaiting tracking start", then "Tracking active" or "Tracking via ELD".	4.4

#	Who	What happens	Detail
8	Rep	Optional edits after signing.	WF-009

WF-008 Carrier approval at cover

Approval rules: CAR-007, CAR-015.

- **Approved**: "Cover & send rate con"; the rate con goes out immediately.
- **Candidate** (never used): "Cover & request packet". The load is covered (Scheduled) and a packet request is e-mailed. The rate con is held (lock icon) until an Owner approves the carrier on the carrier page, which releases every held rate con for that carrier.
- **Don't use** (not authorized, no authority, unsatisfactory safety, or marked "Don't use this carrier"): cover is blocked ("Carrier not authorized"). Only an Owner can tick "Override coverage status"; the button then reads "Cover & send rate con" and the rate con goes out at once without a packet.
- If sending fails after cover: "Failure occurred while sharing rate con. Covered successfully but rate con needs to be shared." The rep uses Share on the rate confirmation page.

WF-009 Changes after the carrier signed

- Changing price, stops, equipment or pickup number returns the assignment to "not sent"; the rep sends it again.
- The check box "Send updated Rate con" is **off** by default.
- The carrier sees "Something's changed" with the differences and **Confirm changes**; if the page was open during the change: "This load was updated. Please review the new details."
- An old link shows "Oops, this is an old version"; the previous signed version stays available ("Download previous version").
- A link for a dropped or canceled load shows "Shipment no longer available" (with "Download canceled confirmation" when applicable).

WF-010 Carrier never signs

Hourglass icon (sent, not signed); the load stays **Scheduled**. The rep can resend (Share), add a recipient or phone the carrier. Green check: signed; warning icon: not sent.

WF-011 Carrier packet

The packet request e-mails a secure-link wizard (company information, documents, insurance details). Full story: Workflow 8 part C.

WF-012 Auto Transport

Same steps. Items are vehicles with VIN, length and weight. Vehicle condition reports and photos are not part of the first version.

Workflow 3: Pickup, in transit, delivery and POD

The rep (or tracking service) records pickup; the load is In transit; the rep records delivery and uploads the POD, which makes the bill and invoice actionable. **Who:** Rep, Carrier driver (through tracking), Customer (sees progress). **Detail:** 4.4, 4.2 (queues), 6, 7.

#	Who	What happens	Detail
1	Rep	**Confirm pickups** queue (Scheduled, pickup date passed; stop card warns "This should have been picked up by now"). Checks the tracking pill and log, adds the **PICKUP** number.	4.2, 4.4
2	Rep	**Picked up** on the first stop; dialog "Shipment picked up" (time, date, notes, PRO number). Shipment **In transit**; tracking moves to Picked up; **Remove carrier** disabled. Planned dates are not rewritten; the actual time is stored on the stop.	4.4
3	System and rep	Location, arrival, ETA from the tracking service; rep can add **ETA**, **In**, **Out**, "+ add tracking update", edit appointments. Entries record their creator (user or service).	4.4
4	Rep	**Confirm deliveries** queue (In transit, delivery date passed). **Delivered** on the last stop ("Shipment delivered"; **Complete** if a stop is both). Shipment **Delivered**; bill and invoice become ready.	4.2, 4.4
5	Rep	"Upload POD" from the banner, last stop, Documents page, or bill or invoice page. If required, the invoice can now be sent.	4.4, 6
6	Customer	Sees ETA, arrived, picked up, delivered per stop; downloads the POD (Workflow 7).	4.11

WF-013 What is automatic and what is manual

- Truckload: the tracking service supplies location, arrival and ETA; reps confirm **Picked up** and **Delivered**.
- LTL: carrier events (for example "assigned to a driver for pickup") appear on the shipment; a rep confirms pickup and delivery when the feed is late or missing.

WF-014 Rules for tracking entries

- In order: a stop can be picked up, delivered or marked arrived only when the previous stop is completed.
- A future time is refused: "Time is in the future ()".
- A rep can edit or delete an entry; entries created by the tracking service are read-only.
- Removing an earlier completion while a later stop is completed is refused.

WF-015 Tracking problems

The tracking pill explains the state (for example "Awaiting rate con", "Driver needs app", "Phone turned off", "Tracking disabled"; full list in Appendix B). When tracking fails, the rep uses manual entries and can switch tracking off and on from the pill.

WF-016 Missing or late pickup

The load stays in Confirm pickups; the rep can change the pickup date (WF-009) or drop the carrier (Workflow 6).

WF-017 POD rules

- Customers can require a POD for truckload, LTL or both.
- Required and missing: the invoice cannot be sent ("POD required before you can send invoice") and the bill card reads "Upload POD".
- A POD can be a PDF or a picture (jpeg, png, bmp, avif, gif, tiff, webp, heic).
- Refused or partial deliveries, damage and claims have no dedicated flow in the first version; reps use notes and extra charges.

Workflow 4: Carrier bill, approve, QuickBooks, paid

Carrier invoices arrive at 10-4's accounting mailbox; staff upload and enter the bill, compare it with the expected cost, approve it, and the system pushes it to QuickBooks. QuickBooks reports payment (or staff record it). **Who:** Rep or accounting user; Owner when approvals are Owner-only. **Detail:** 4.5, 4.8 (terms), 6, 7 (QuickBooks, INT-025 to INT-035, BIL-031).

#	Who	What happens	Detail
1	Carrier / accounting	Carrier e-mails invoice, BOL, POD to the accounting mailbox (outside the system). **Bills and invoices**, tab **Upload**: each delivered load without a bill shows an orange "Upload bill" card. Staff drop the PDF (stored as a "Bill" document).	4.5, 6
2	Accounting	Enters **Bill/invoice number**, **Mail payment to**, **Carrier accounting contact**, **Bill amount**, **Bill date**, **Days to pay**, **Due date**; **Save bill**. Dates fill from the carrier's terms (default 30 days from bill date). Every save is in the change history.	4.5
3	Accounting	Reads the variance banner ("Bill of $X is $Y less/more than expected"); may add charges (Layover, Detention, Lumpers) or switch **In dispute** on.	4.5
4	Authorized user	**Approve to pay** (**Approve to short pay** below expected, **Approve to overpay** above). **Undo** until paid. Bill moves to the **Pay** tab; the bill goes to QuickBooks.	4.5
5	System	Pushes the bill to QuickBooks with the amount billed; re-approval updates the same QuickBooks bill; Undo does not remove it. Icon: Success, Unsent, Error or Disconnected.	7, BIL-031
6	Owner / accounting	Pays in QuickBooks (system then shows "PAID in full on " and the green "Paid" card, WF-024), or **+ Record payment** (date, amount up to the balance, method chosen by the user, memo; removable, bill returns to unpaid).	4.5

WF-018 Bill amounts and variance

The bill keeps the amount billed and the amount expected; the difference drives the variance banner and the approve button text. The amount pushed to QuickBooks is the amount billed.

WF-019 Approval is not blocked by a missing POD

A missing POD changes the card to "Upload POD" so staff see it first; it does not stop approval.

WF-020 Owner restrictions

Two company options can limit accounting to Owners: only Owners see approve and record-payment buttons, and only Owners upload or edit bills. Members then see a read-only bill page.

WF-021 QuickBooks errors

A red icon opens a dialog with the error and **Retry sync** (typical causes: expired connection, missing expense account, vendor mismatch). If disconnected, an orange icon says "QuickBooks disconnected"; an Owner reconnects in Settings.

WF-022 Bill statuses on the card

"Upload POD", "Upload bill", "Need to approve", "Due in N days", "Due N days ago", "Paid", "Canceled", "Scheduled", "In transit". Meanings: Appendix B.5.

WF-023 More than one bill per shipment

One bill per carrier or vendor on the load (for example a dropped carrier's TONU bill, or a lumper or towing vendor); each follows this workflow on its own. An extra bill after approval or payment: BIL-036.

WF-024 Paid status from QuickBooks

When QuickBooks records a payment for a bill or invoice the system pushed, the system marks it paid ("PAID in full on ") as soon as QuickBooks reports it (section 7). Staff can still use **+ Record payment** or **+ Record customer payment**.

Workflow 5: Customer invoice, send, QuickBooks, payment, aging

Staff send the invoice after pickup (and POD if required); the system e-mails it and creates it in QuickBooks; payment is recorded in QuickBooks or by staff; aging and statements chase late payers. **Who:** Rep or accounting user; Customer (receives e-mail; portal customers can view). **Detail:** 4.5, 4.7, 5, 6, 7 (INV-021).

#	Who	What happens	Detail
1	System	Draft invoice at booking (reference number = BOL number; lines mirror shipment price lines). Open from the shipment or **Send** tab; **+ Create invoice** if missing. Rep may add charges and press **Regenerate**.	4.5
2	Rep	**Send invoice** (or bulk "Send invoices" on **Send**); reviews To, Invoice date, Due, Days to pay, Message. Blocked before pickup ("Invoice can't be sent until the shipment has been picked up") or without a required POD ("POD required before you can send invoice"). No billing e-mail: the dialog asks and saves it.	4.5
3	System	One e-mail per billing and Cc address, PDF attached, secure link (LNK-001); "Combine PDFs (bill and POD)" attaches POD files separately (CUS-015, DOC-012). Due date = invoice date plus payment terms (shipment, customer, account default 30). Pushes to QuickBooks on send and resend, matching or creating the customer by name; never a second invoice (INV-021).	5, 7
4	Customer	Pays outside the system (ACH, check, wire); QuickBooks-reported payments mark it paid (WF-024).	4.5

#	Who	What happens	Detail
5	Accounting	**+ Record customer payment**: customer, Amount, Payment date, Reference no., Method (user-chosen), tick open invoices, **Apply $X to selected**. Applied in order; remainder stays as credit; zero-balance invoices show "PAID in full" and credit is freed. A payment can be removed or removed and deleted (invoice returns to outstanding).	4.5
6	Accounting	Chases late invoices: aging buckets on the customer Invoices tab, Late invoices board, **Send statement** (records "Last sent by "). **In dispute** moves an invoice to **Disputed** and out of undisputed overdue totals.	4.5, 4.7

WF-025 Invoice send rules

- Sending only after pickup; also needs the POD if the customer requires it.
- Editing a sent invoice rebuilds it in place; staff press "Resend" and the same QuickBooks invoice is updated. There is no "credit and re-bill" step. A sent invoice with no payments can be canceled and created again (INV-025).
- Canceling an invoice that has payments is refused ("Remove the payments first.").
- A portal customer sees only sent invoices.

WF-026 Payments and credit

- A payment has a method (13 options, Appendix B.7) and can be spread over several invoices.
- Overpayment stays as credit on the payment; a short payment leaves a balance.
- Write-offs, credit memos and refunds are not in the first version.

WF-027 Aging

Buckets "1-15 late", "16-30 late", "31-60 late", "61+ late" (days past due), shown as the aging bar on the customer Invoices tab and as the Late invoices board.

WF-028 Customer statement

Send statement builds a PDF of the customer's open sent invoices and e-mails it to the billing contacts. Paid invoices and unsent drafts are not listed.

WF-029 Booking hold

An Owner can switch a customer's booking off ("Booking disabled"); portal and quote pages show it and Book is disabled. Credit figures are always shown; blocking for lack of credit follows "Enforce credit limits" (PAY-022, SET-020; off at go-live). The automatic hold at 31 days past due and weekly past-due statements are planned for later.

WF-030 Invoice tabs

POD, **Send**, **Outstanding**, **Disputed**, **Overdue**. Meanings: Appendix B.6.

Workflow 6: Carrier replacement and TONU

A rep drops a failed carrier; the load returns to Booked and is covered again. A "truck ordered not used" fee (TONU) is entered when dropping, and the dropped carrier gets its own bill. **Who:** Rep (Owner for overrides). **Detail:** 4.3, 4.5, 4.4.

#	Who	What happens	Detail
1	Rep	**Remove carrier** (red) opens "Drop carrier": "Are you sure you want to drop from this shipment?" Enters **Do you owe them TONU?** and **Charge customer?** (either may be empty), **Drop carrier**. Shipment back to **Booked**; old link shows "Shipment no longer available"; tracking for the dropped driver stops.	4.3, 4.4
2	System	TONU above zero: a separate TONU record ("Truck ordered not used" charge) and pending bill for the dropped carrier; customer amount joins the customer price lines.	4.5
3	Rep	Covers with a new carrier (Workflow 2 steps 2-7); dropped leads show a red "Previously dropped" mark.	4.3
4	Accounting	Processes both carrier bills (Workflow 4 twice), then one customer invoice with the customer TONU line if any (Workflow 5).	4.5

WF-031 A drop always releases the carrier

A drop always removes the carrier and returns the load to Booked. With both fields empty or zero there is no TONU record and no bill.

WF-032 TONU and cost lines

- The TONU appears as its own block under Cost and Price with the dropped carrier's name; read-only after the drop.
- Cost owed and price charged are independent.
- The standard TONU in the rate confirmation terms is the amount in Terms and Fees (the account can set it).
- A load can be replaced more than once; each drop with an amount adds another TONU bill.

WF-033 When replacement is not possible

- **Remove carrier** is disabled once the load is In transit or Delivered; use Cancel, or contact an Owner.
- If the shipment is canceled instead, the rep can enter a TONU in the cancel dialog. Canceling after a TONU drop sets the TONU back to zero unless re-entered.

WF-034 Signed rate confirmation of the dropped carrier

The signed version stays in the shipment history ("Download previous version").

Workflow 7: Customer portal (customer quotes, books, tracks)

A customer with a branded login link signs in with a one-time e-mail link, requests LTL quotes, books, follows shipments, downloads documents and sees what they owe. **Who:** Customer contact, Rep (turns access on,

shares quotes, handles requests). **Detail:** 4.11, 4.6, 4.7, 4.5, 5. Sign-in link: POR-005.

#	Who	What happens	Detail
1	Rep (setup)	Turns on **Customer login** in Settings > Customers and for the customer, adds a contact with e-mail, sets margins, auto-quoting, auto-dispatch, copies the login link ("Copy link") and sends it. No system e-mail on enabling.	4.7, 4.10
2	Customer	Branded login page (10-4's logo and name); enters an e-mail; one-time sign-in link (once, 15 minutes), same answer for every address (POR-005). A used or expired link offers "Log in again".	4.11
3	Customer	Requests LTL quotes (Workflow 1). Auto-quoting off: "Preparing quotes", request waits in the staff Quote queue. Books ("Book for $X") as Workflow 1 steps 6-9; auto-dispatch follows the customer's setting.	4.6
4	Customer	Truckload: **+** in the Shipments title bar, **Shipment**: a request (no cost, no carrier), **Requested**, in the staff **Finish booking** queue; a rep books and covers it (Workflow 2). No truckload quotes.	4.11
5	Customer	Tracks shipments (status, per-stop ETA, arrived, picked up, delivered, LTL PRO number, **Track** link; live); downloads BOL, labels, POD, sent invoices; sees a statement.	4.11, 4.12

WF-035 What the customer never sees

Cost, margin, profit, carrier rate confirmations, carrier bills, internal notes, the activity timeline, other customers' data and the driver. Carrier names can be hidden by an account setting.

WF-036 Customer limits

- No POD upload, no payment button, no Settings or Carriers pages.
- A customer can cancel a quote request from the results page, but not a shipment (the page shows how to contact the rep).
- A customer cannot change a shipment request; changes go through the rep (POR-053).
- Quotes are visible only after a rep shares them (or if requested with auto-quoting on). "Stop sharing" empties the list.

WF-037 Blocked booking

When booking is off for the customer: "Booking disabled" with "Contact rep for more info". Other block reasons: WF-003.

WF-038 Secure links without login

Quote e-mail links let a customer open quotes and book without signing in; similar links show the shipment (BOL, labels, POD) and the invoice. Links stay valid 42 days, renewed by each new send, and can be revoked ("Stop sharing") (LNK-001 to LNK-003).

Workflow 8: Account setup and onboarding

How a new account becomes ready for work, and how customers, carriers and vendors are added day to day. **Who:** Owner (setup), Rep (customers, carriers). **Detail:** 4.10, 4.7, 4.8, 4.6 (carrier accounts), 7, 8.

A. First-time setup (Owner; detail 4.10)

#	Action	Result
1	Company profile and logo (Account page).	Logo and name on the login page, quote e-mails, documents.
2	Invite users: e-mail, **Invite**; Owner can toggle **Owner**, **Resend** or cancel.	Invitee presses "Agree & join", sets a password and joins as Member (or Owner).
3	Settings > Customers: default margins, customer login, "Reveal carrier names", credit limits ("Enforce credit limits", off at go-live), booking hold.	Defaults for every customer.
4	Settings > Carriers: Terms and Fees text, carrier agreement text or link, rate confirmation reply-to e-mail and phone, "Send packet requests", "Use terms and conditions", tracking connection.	Used by rate confirmations and carrier pages.
5	Settings > Accounting: connect QuickBooks, expense account and invoice service item, payment terms (default 30 days), invoice Cc addresses (restrictions on bills and payments are set up with Stackup, ROL-021).	Bills and invoices push to QuickBooks.
6	LTL carrier accounts: 10-4's account number and credentials, activate.	"activating" then "activated"; rating starts.
7	Teams if used; report access.	

B. Add a customer (Rep; Owner-only settings marked)

Steps (detail 4.7): **+**, add a customer, type the name (3 or more characters runs a "Did you mean?" duplicate search), **Add customer** (name only, no e-mail sent); billing address and e-mails, tax and legal details, "require POD" switches, "Combine PDFs (bill and POD)" (CUS-015), "Days to pay" (Owner sets, Members see only; each field saves on leaving it); contacts; **Booking and quoting** (booking on or off is Owner only, customer login, auto-quoting, auto-dispatching; controls the portal, Workflow 7); margins and minimum profit per carrier (Workflow 1); sales reps (one primary); credit limit and note (Owner), documents, address book of shipper and consignee locations (prefills shipments).

C. Add a carrier (Rep, with Owner approval; detail 4.8, 4.3)

#	Action	Result
1	**+**, Carrier, search by MC, DOT or name; **Add to your list** > **Add carrier**.	FMCSA results; status **Candidate** ("Haven't worked with this carrier before").
2	Add contacts (Owner sets payment terms, tax, legal entity, 1099 status). **Request carrier packet** (or "Cover & request packet").	Carrier gets a secure-link e-mail.
3	Carrier confirms company information (or "This is not me"), uploads authority, insurance certificate, W-9, enters insurance details.	Packet completed; rep sees documents and insurance expiry.

#	Action	Result
4	Owner sets **Approved** (or "Don't use this carrier").	Held rate confirmations released (WF-008); carrier leaves "Approve & review carriers" (CAR-007, CAR-015).

D. Add another vendor (Rep)

+, Vendor, type (for example Towing, Lumper, Warehouse), name. It can then be added to a shipment with its own purchase order and bill.

WF-039 Single account

One company's account: no public sign-up, no switching between accounts. Users join only by Owner invitation.

WF-040 Roles in setup

Owners do setup and approvals (settings, users, carrier approval, LTL carrier accounts, credit decisions, carrier agreement text); Members work day to day. The system enforces this on every action, not only by hiding buttons.

WF-041 Importing existing data

Existing customers, carriers, contacts and shipments (with bills, invoices, payments, documents) are loaded during migration (section 8) before go-live. Notes, load history, carrier leads, packet links, invoice send records and earlier carrier assignments are not imported (MIG-006, MIG-041). Decision for 10-4 (see the Summary, section 9): MIG-041.

Workflow 9: E-mails and notifications across the lifecycle

A small number of e-mails, each with a secure link; staff also see live counters and banners. Wording and rules: section 5 (EML IDs).

Moment	E-mail	To
Quote ready	Quotes link ("Quotes for → ")	Customer contact
Shipment booked	BOL and labels download links	Each stop contact with "Share BOL" on
Load covered (approved carrier)	Rate confirmation ("Confirm Load ", "View rate confirmation", PDF attached)	Carrier dispatcher
Candidate carrier covered	Carrier packet request	Carrier contact
Carrier signs	Signed confirmation copy (only when a carrier agreement applies)	Carrier dispatcher
Terms changed after signing	Updated rate confirmation	Carrier dispatcher

Moment	E-mail	To
Invoice sent	Invoice with PDF and POD	Billing contacts and Cc
Invoice shared again	Invoice link	Chosen contacts
Late payer	Customer statement with PDF	Billing contacts
New user	Invitation link	Invitee
Customer sign-in	One-time sign-in link (15 minutes)	Customer contact
Staff forgot password	Password reset link	Staff user
E-mail address check	E-mail verification link	The user

Not sent by the system: a booking confirmation to the customer (only the BOL e-mail goes out), the driver's tracking text (the tracking service sends it), notices of assignment, QuickPay requests, credit-request e-mails (a mail link opens the user's own mail program), weekly past-due statements (planned), and incoming carrier invoices (they reach the accounting mailbox).

In-app notices (not e-mail): short pop-up messages, live counters on the sidebar queues (Finish booking, Quote, Dispatch, Cover, Confirm pickups, Confirm deliveries), warnings on shipment pages, live updates to shipment pages (4.12).

WF-042 Recipients

- BOL and labels: each stop with "Share BOL" on and a contact e-mail; pickup at a third-party warehouse uses the facility contact.
- Rate confirmation: the dispatcher chosen at cover.
- Invoice: billing e-mails plus the account Cc list; if none, the dialog asks and saves it.
- Quotes: customer contacts plus any typed addresses.

WF-043 Delivery log

Staff see each share's state (pending, sent, unopened, opened) and failures ("Failed to send").

WF-044 Sender and reply-to

E-mails come from 10-4's own sender domain. The rate confirmation reply-to is set in Settings > Carriers; otherwise replies go to the rep who covered the load.

Who can do what (workflow view)

Action	Owner	Member	Customer	Carrier
Quote, book, cover, track, upload documents	Yes	Yes	Quote and book LTL only; track own shipments	No

Action	Owner	Member	Customer	Carrier
Share quotes, send rate confirmation, send invoice	Yes	Yes	No	No
Approve a carrier, override a blocked carrier	Yes	No	No	No
Margins outside limits	Yes	No	No	No
Approve bill, record payments	Yes	Yes, unless restricted to Owners	No	No
Settings, users, QuickBooks, LTL carrier accounts, credit decisions	Yes	No (view only)	No	No
Confirm rate confirmation (no login)	n/a	n/a	n/a	Yes, through the secure link
Fill carrier packet (no login)	n/a	n/a	n/a	Yes, through the secure link

4.1 Navigation, Dashboard and Search

> **In short:** the frame around every screen: the left navigation with task counters, the Dashboard staff see first, and "Find anything...", the search that jumps to any customer, contact or shipment. Customers see a smaller navigation and never see the Dashboard or Find (section 4.11).

4.1.1 Application frame and left navigation

NAV-001 Frame

Every staff screen sits next to a fixed left navigation bar on a light blue-grey background; the content scrolls on the right. There is no top bar on desktop: each page has its own title row (title left; search, export and sort icons right where present). Printing hides the navigation and prints on white.

NAV-002 Desktop and phone layout

- Desktop or laptop: always visible, a little narrower on small laptops (long labels may be shortened with "...").
- Phone or small tablet: hidden. A white top bar shows a menu button (accessible name "Main Menu") on the left and the company logo in the center. The button opens a full-width menu with the same items in the same order. A close "X" replaces the logo while it is open; Escape also closes it, and so does choosing any item.

NAV-003 Items in the navigation, top to bottom

#	Item	Shows	Goes to
1	Company logo	The company logo, or the company name if no logo has been uploaded (Settings > Company)	Dashboard
2	"Quote" (blue button, circled plus on the left)	Always	New quote form
3	"Find anything..." (white rounded button with magnifier)	Always	Opens the Find window (SRC-001). The label reads "Find..." when the navigation is narrow.
4	Queue links	Only rows with a count above 0 (NAV-005)	The matching queue list
5	"Customers"	Always	Customers list
6	"Quotes"	Always	Quote history
7	"Shipments"	Always	Shipments list

#	Item	Shows	Goes to
8	"Carriers"	Always	Carriers & vendors list
9	"Bills & Invoices"	When accounting is turned on for the company (it is on for 10-4)	Bills & Invoices
10	"Reporting"	Always	Reports
11	"Settings" (gear icon, small text)	Always	Settings
12	User block (round photo or initials, full name, arrow)	Always	Your profile (NAV-013)

Items 5 to 8 each have a circled "+" at their right edge (NAV-008 to NAV-012). Dividers separate the top block, the queues, the modules and the footer.

NAV-004 Current page highlight

The current page's row has a grey background. Inside a queue list (for example "Cover") only the queue row is highlighted, not "Shipments".

Task queues and counters

NAV-005 Queue links with counters

The queue block lists work needing someone today. Each row has a label and a small orange badge with a number; a row is hidden at 0 and the whole block when every row is 0 (including when only "Confirm deliveries" has work, it shows). Rows in this order:

Row label	Counts	Opens
"Finish booking"	Truckload shipment requests that a customer started in the portal and staff still must finish	The list of shipment requests to finish
"Quote"	Quote requests from customers that staff still must price	Quote requests still to finish
"Dispatch"	Booked LTL shipments waiting for a pickup request	The list of LTL shipments to dispatch
"Cover"	Booked Truckload shipments that still need a carrier	The list of Truckload shipments to cover
"Confirm pickups" ("Confirm pickup" when the number is 1)	Scheduled shipments whose pickup date is before today	The list of pickups to confirm
"Confirm deliveries" ("Confirm delivery" when the number is 1)	In-transit shipments whose delivery date has passed	The list of deliveries to confirm

- Screen readers read each row as, for example, "Cover 53 outstanding tasks" ("1 outstanding task" for one).
- Non-staff users never see the queue block.
- There is no queue row for carriers waiting for approval; "Approve & review carriers" opens from the Carriers list (section 4.8).

NAV-006 **Counters stay current**

Numbers refresh without a page reload: when a shipment or quote changes anywhere in the company, when you click a queue row, when you change page, and when the connection comes back after a break.

NAV-007 **Queue block never hides work**

The block shows whenever any queue has a number above 0.

The "+" add menu

NAV-008 **"+" next to Customers**

Opens the "Add customer" window over the current page: a "Customer name" box and a blue full-width "Add customer" button, which then opens the new customer's page. Duplicate warning ("Did you mean?") and details: section 4.7.

NAV-009 **"+" next to Quotes**

Opens a new quote form (section 4.6).

NAV-010 **"+" next to Shipments**

Opens a new shipment form (section 4.2).

NAV-011 **"+" next to Carriers**

Opens the window "What do you want to add?" with two dashed tiles:

- "Carrier": "Freight carrier with MC or DOT number" — opens a search box "Carrier MC or DOT #" and then the carrier's page.
- "Vendor": "Providers such as crane, insurance, warehouse, etc." — opens the add-vendor form. (Section 4.8.)

NAV-012 **"Quote" button**

The blue "Quote" button starts an LTL quote from any page.

Profile menu and footer

NAV-013 Settings and profile

At the bottom of the navigation:

- "Settings" opens the Settings home page (section 4.10).
- The user block shows your photo (or initials on a blue circle) and full name; clicking opens your profile (ACT-006). There is no drop-down: "Log out" is a button on the profile page. The close "X" on Settings or the profile returns to the previous page.

NAV-014 Navigation for other users

Customers see "Quote", "Quotes" (with "+"), "Shipments", "Invoices", "Data" only: no Find, queue block, Customers, Carriers, Bills & Invoices, Reporting or Settings. Carriers on secure links see no navigation. See section 4.11.

NAV-015 Error and gate screens

Full-screen blue messages replace the page when needed:

- "Error logging in": "This probably means we weren't able to reach the server." Buttons "Try again" and "Log out".
- "Account required": "This page requires an active account." Button "Log out".
- "Account disabled": "Please contact support to have it re-enabled." Button "Log out".
- "Authentication error": "This user cannot log in. Please contact Support." Shown to a blocked or removed user who tries to sign in.
- "Unable to load account": "We couldn't find this login page. Check the link you were given." Shown when a customer opens a login link that cannot be matched to 10-4's account.

NAV-016 Start-up screen and session refresh

After sign-in a full-screen loader shows until the person's details, the company and the screen lists have loaded. If the tab was in the background for more than one hour, these details refresh on return, so changes made meanwhile (for example a new role) apply without signing in again.

4.1.2 Dashboard

DSH-001 Dashboard purpose and access

The staff home page (after sign-in, and via the company logo): quotes and shipments per stage as clickable dots, three to-do counters, your own recent activity, and a map of today's pickups and loads in transit (layout DSH-013). Customers are sent to the Quote form instead.

DSH-013 Dashboard layout

No title row. A map fills the page; tiles float over it. Top: "Quotes" group (left, one third) and "Shipments" group (right). Bottom right: counters "Quote", "Dispatch", "Cover". Bottom left: map filter buttons.

DSH-002 "Quotes" group

Rounded card "Quotes" with two tiles; the card opens Quote history. Each tile is a row of dots, one per open quote request.

Tile	Counts quote requests with status	Click on the tile opens
"Requested"	Draft requests (customer asked, no quote sent yet)	Quote history filtered to "Requested"
"Quoted"	Requests that have a quote waiting	Quote history filtered to "Quoted"

- The Quote history page shows the filter as a removable chip, "Status: Requested" or "Status: Quoted".
- Click on one dot opens that quote request.

DSH-003 "Shipments" group

Rounded card "Shipments" with four tiles; the card opens the Shipments list. One dot per shipment (canceled shipments and drafts are not counted).

Tile	Counts shipments with status	Click on the tile opens
"Requested"	Requested	Shipments list filtered to Requested
"Booked"	Booked	Shipments list filtered to Booked
"Scheduled"	Scheduled	Shipments list filtered to Scheduled
"In transit"	In transit	Shipments list filtered to In transit

One dot opens that shipment. Other statuses (delivered, canceled) are not shown (statuses: SHP-075).

DSH-004 Dots

A dot is **grey** normally and **orange** when the item needs action: a shipment in a queue (Cover, Dispatch, Finish booking, Confirm pickups, Confirm deliveries), or a customer quote request staff still must answer. Hover shows a blue ring.

DSH-005 Counter cards "Quote", "Dispatch", "Cover"

Three white cards (label left, number right):

Card	Number	Opens
"Quote"	Quote requests staff still must finish	Quote requests still to finish
"Dispatch"	Booked LTL shipments waiting for a pickup request	The list of LTL shipments to dispatch
"Cover"	Booked Truckload shipments that need a carrier	The list of Truckload shipments to cover

A card at 0 is greyed out and cannot be clicked. Numbers equal the navigation badges (NAV-005).

DSH-006 Live updates

Dots, counters and map update by themselves when anyone books, covers, picks up, delivers or cancels a shipment or a quote request changes.

DSH-007 Loading and empty states

Tiles show three bouncing dots while loading; empty tiles are blank. Counter cards are greyed at 0. The activity panel is hidden when empty. Map filter buttons are hidden at 0.

DSH-008 Activity panel

A collapsible card above the counters, titled "Activity" with an arrow, collapsed at first. It lists the **signed-in user's own** recent bookings and cancellations, newest first, up to 50, scrolling:

- "BOL {number} booked"
- "BOL {number} canceled"
- "Shipment booked" / "Shipment canceled" if the BOL number is not known

Each row shows how long ago it happened and opens that shipment. The panel shows only if there is at least one entry.

DSH-009 Map

A map of the United States draws a thin line from origin to destination for each shipment with known pickup and delivery places:

- **In transit** shipments are drawn as solid lines. The origin is a small grey ring and the destination a blue pin.
- **Scheduled with pickup today** are solid lines with a grey origin circle and a blue destination pin.
- **Scheduled with a pickup date before today (late)** are dashed lines with a red origin circle and a grey outlined pin at the destination.
- Scheduled shipments with a future pickup date are not drawn.
- The map draws up to 250 scheduled and in-transit loads. The pill (DSH-010) and navigation numbers count all loads, so they can exceed what the map draws.

DSH-010 Map filter buttons

Bottom left: a round map icon button and up to three pills (hidden at 0):

Pill	Counts
"{n} Picking up"	Scheduled shipments whose pickup date is today
"{n} Late picking up"	Scheduled shipments whose pickup date is before today (same number as "Confirm pickups")
"{n} Delivering"	Shipments in transit

Clicking a pill shows only that group on the map: it turns white with dark text and the others dim. Clicking it again shows everything. Nothing reloads.

DSH-011 "Re-center map"

The map icon button (title and accessible name "Re-center map") shows the whole country again.

DSH-012 Dashboard on a phone

The map fills the page behind the tiles; "Quotes" and "Shipments" stack at the top, "Quote", "Dispatch" and "Cover" at the bottom. Map filter pills are not shown.

4.1.3 Find ("Find anything…") and global search

SRC-001 Opening Find

Staff open Find with "Find anything..." in the navigation (also in the phone menu) or Ctrl+K (Windows) / Cmd+K (Mac) on any page; not available to customers. It is a centered window over a dimmed page with a search box (placeholder "Go to...", cursor already in it) and a round "X" (accessible name "Close modal") at the top right outside the window.

SRC-002 Closing Find

Find closes on Escape, the "X", a click outside, or choosing a result. The box is emptied on each close.

SRC-003 What the search does

- Nothing is searched until **3 characters** are typed; leading and trailing spaces are ignored.
- It runs about half a second after typing stops; only the latest search counts.
- A clear "x" shows when the box has text; a spinner shows while loading.

SRC-004 Result groups

Up to three groups, each with a grey heading, shown only if they have results. Typed words are highlighted.

Group	What matches	Order	Maximum	Row shows	Clicking opens
"Customers"	Customer name	A to Z	10	Customer name	The customer page
"Contacts"	Every word typed matches the contact's first name, last name, e-mail or phone	A to Z	10	"{contact name} @ {customer name}"; second line: e-mail, then " / " and phone	The contact's customer page
"Shipments"	See SRC-005	Newest pickup date first	20	The standard shipment row: BOL, pickup date, customer, route (origin to destination), delivery date, carrier and status	The shipment page

SRC-005 Keyword search on shipments

With several words, **every word** must be found in any of the fields below (words may match different fields; at most 6 words used). Matching ignores case and matches part of a word.

- Shipment numbers: BOL number, custom BOL number, original BOL number, PRO number, pickup number.
- Stops: city, state, ZIP, company name, contact name, every reference number.
- Customer name and the customer's shipment contact name.
- Carrier: carrier name, driver name, driver phone, trailer number, carrier pickup number.
- Shipment notes (notes that have not been deleted).

SRC-006 Keyboard

- "Down" and "Up" arrow keys move through the results and wrap around at the ends.
- "Enter" in the search box opens the first result (the top hit).
- "Enter" or "Space" on a highlighted result opens it.

SRC-007 Messages and states

State	What the user sees
Box empty, no history	Only the search box
Fewer than 3 characters	Blank below the box
Searching	Spinner
Nothing found	"No matches found for *{text}*"
Search failed	"Search failed. Try again."

SRC-008 Recently visited

When the box is empty and the user has visited records before, the window shows a heading "Recently visited" and a list of the last records the user opened, newest first, mixed together (no group headings). The system remembers up to 5 of each kind. Each row is one button with an icon and:

Kind	Icon	Row text	Opens
Customer	Building	Customer name	Customer page
Shipment	Pallet box	"{origin city, ST} to {destination city, ST}" and grey "BOL {number}"	Shipment page
Quote request	Stacked layers	"{origin} to {destination}" and grey customer name (no grey text if no customer)	Quote results page
Vendor	Vendor icon	Vendor name	Vendor page
Carrier	Carrier icon	Carrier name	Carrier page

A record is added each time its page is opened. Users and teams are not listed.

SRC-009 Other pickers

Some forms reuse the box with another placeholder: "Find shipment..." (pick a shipment to link) and "Find customer..." (pick a customer).

Who can do what

- **Owner and Member:** full navigation, Dashboard and Find, with identical counters and results. Find shows every customer to every staff user (ROL-019).
- **Customer:** shorter navigation; no Dashboard, queues or Find; sent to the Quote form from the home page.
- **Carrier:** no navigation (secure links only).

4.2 Shipments

In short: This part of 10-4 TMS is where every load lives. Reps list and filter shipments, work the daily queues (cover, confirm pickups, confirm deliveries, dispatch, finish booking), book a new truckload or auto transport shipment, edit or duplicate it, and run it from one detail page. The detail page shows who hauls the load, what it costs and earns, every stop, the items, notes, and a full history of changes. Owners and Members use all of it. Customers and carriers see a reduced view of the same shipment.

Part A. Shipments list and work queues

Shipments list

The list is reached from "Shipments" in the left menu. The page title is "Shipments". A "+" button next to the title (screen-reader text "Create new shipment") opens the new shipment form. A small spinner shows next to the title while data loads.

SHP-001 Two list views: Active and All

Tabs "Active" and "All". Changing tabs keeps the current filters but resets the sort to that tab's default.

Tab	What it shows	Layout	Default sort
Active	Shipments that still need attention: Requested, Booked, Scheduled, In transit, and Delivered shipments whose customer invoice is not fully paid yet. Canceled shipments never appear here.	Grouped by status, each group with a sticky header with the status name, in this order: Requested, Booked, Scheduled, In transit, Delivered. The chosen sort is kept within each group.	Pickup date, old to new
All	Every shipment, including Canceled.	One flat list, no group headers.	Pickup date, new to old

SHP-002 Header controls

Control	What it does
Title and "+"	See above.
Search and filter box	A wide box with a magnifier icon showing the current search text and filter chips. Clicking anywhere in it opens the search and filter window (SHP-009). Accessible name "View shipment filters". Empty, with no placeholder text, when no filter is set.
Tabs "Active" and "All"	Switch the view (SHP-001).
Export button (download icon)	Opens a small panel (SHP-013). Shown only when the list has at least one row, for Owners, Members and customers (own shipments only).
Sort button (sort icon)	Opens a small panel with three sort options (SHP-008). The arrow icon shows the current direction.

SHP-003 Shipment row

Each row is a white card; clicking it opens the shipment detail page. Accessible name "View shipment" followed by the BOL number. On narrow screens the row folds into a two-line card.

Column	What it shows
Status dot and BOL	A small colored dot for the status (SHP-004) and the BOL number. Under the BOL: the tracking alert icon, if any (SHP-006). On hover the status word appears under the BOL.
Pickup	Line 1: date as "Oct 9 Fri" (month, day, weekday); outside the current year the year replaces the weekday. Line 2: the actual pickup time once picked up, otherwise "Appt @ 9:00am" when the first stop has an appointment. Dimmed to 30 percent after pickup (full on hover).
Customer and price	Customer name; under it the customer price, for example "$550.00". Hidden on small screens.
Origin, route, destination	Origin city and state on the left, destination city and state on the right (ZIP on wide screens). The shipper company shows on a second line when different from the customer name; the consignee likewise. In the middle a short line with a dot at each end; dots and line turn green when the origin is picked up and when the destination is delivered. A grey circle with a number shows the count of stops between origin and destination when there are more than two stops. The distance, for example "1,730 mi", sits under the line on wide screens.
Delivery	Same date format as Pickup. Line 2: the delivered time, or "Appt @ time" when the last stop has an appointment. Dimmed until the load is picked up.
Equipment and weight	Equipment name ("LTL" for LTL loads) and weight, for example "42,000 lb". A solid dark "P" badge before the equipment means the load is partial. A dashed "P" badge means a partial is allowed.
Carrier or leads (Owners and Members only)	See SHP-005.

SHP-004 Status dot colors

Status	Dot
Requested	Grey, dashed outline
Booked	Orange
Scheduled	Light blue
In transit	Blue
Delivered	Green
Canceled	Light pink

- A Canceled row is shown at 50 percent brightness (full on hover). A Requested row has a dashed bottom border.
- Customers see "Scheduled" for a load that is Booked in the broker's view.

SHP-005 Carrier and cost block on each row

The right side of the row (Owners and Members only) shows one of:

- **Carrier assigned:** the carrier name; a blue hourglass before the name while the rate confirmation is waiting to be signed; under it the carrier cost, for example "$475.00". A red "carrier hidden" icon follows the cost when the load has an unused carrier charge (a dropped carrier that was paid TONU).
- **Carrier leads, no carrier yet:** "N leads" (for example "19 leads"). A second line shows the lowest and highest quoted cost as "$300.00 — $400.00" (compared as numbers), or one amount when all are equal; only when at least one lead has a cost.
- **Nothing yet:** the text "No carrier".

SHP-006 Tracking alert icon

The icon under the BOL number comes from the load's live tracking. An invisible placeholder keeps the row height when there is no alert.

Alert text	Icon and color
On Time or Ahead of Schedule, At Pickup, At Stop, Left Stop	Clock, green
Behind Schedule	Circular arrow, orange
Possible Detention	Hourglass, orange
Out of Route, Out of Expected Route	Route icon, red
Driver Turned Off Location Services (Android or iPhone), GPS Off, Location Off, Location Hidden, Phone Off, No Phone, Driver Phone Low Battery, Tracking Stopped	Warning triangle, orange
Potential Fraud: Compromised Device, Carrier Overbooked, Device Spoofing, IP Masking Tools, Non-North American Activity, VOIP Phone Number	Circle with x, red
Cannot Determine, Temperature Too Low, Temperature Too High, Temperature Reefer Unit Turned Off, Temperature Alert, Cannot Make It	Warning triangle, red
Past Appointment Time	Clock, red

Stop-level tracking is in section 4.4.

SHP-007 Attention highlight (Active tab only)

For Owners and Members, an Active row gets an orange stripe on its left edge when the load needs action: it is marked as needing action (for example a scheduled load whose pickup date has passed), a carrier is waiting for approval, or it has no carrier. The All tab and the queues do not show the stripe.

SHP-008 Sort

Three options; the selected one is highlighted blue.

Option	Label	Second text
1	Created date	new to old
2	Pickup date	new to old

Option	Label	Second text
3	Pickup date	old to new

The choice is remembered for each view (SHP-011). The "Confirm deliveries" queue has no Sort button; it is always sorted by delivery date, oldest first.

SHP-009 Search and filter window

Clicking the search and filter box opens a centered window with a round close button above its top right corner. Clicking outside, or pressing Enter in the search field, closes it.

At the top is the search field with the placeholder "search for...", focused on open. The text is applied half a second after typing stops and finds a load by any word, for example a city, customer, BOL or reference. Below it are the chips of the filters already set (SHP-010). Then these sections, in order:

#	Section	Control and options
1	Status	Six on/off switches, each with a status word and a colored dot: Requested, Booked, Scheduled, In transit, Delivered, Canceled. "Scheduled" is shown to Owners and Members only. Several can be on.
2	Equipment	Twelve on/off switches, one per equipment group, in this order: LTL, Dry Van, Flatbed, Refrigerated, Intermodal, Drayage, Dump, Dry Bulk, Power Only, Driveaway, Auto Transport, Tanker. A blue link at the top right says "Select truckload" and switches on every group except LTL; when exactly those are on it says "Unselect truckload" and clears them. "LTL" together with other groups shows loads matching any of them.
3	Booked date	A date range box with two date inputs separated by an em dash and a calendar button. Below it a grid of preset buttons: Today, Yesterday, This week, Last week, This month, Last month, This year, Last year. A custom range can be typed or picked.
4	Pickup date	Same range box. Presets: Today, Tomorrow, Yesterday, This week, Next week, Last week, This month, Next month, Last month, This year, Last year.
5	Delivery date	Same as Pickup date, same eleven presets.
6	Origin address	Type a city or state; suggestions appear after a short pause. Choose one.
7	Destination	Same as Origin address.
8	Carrier	Pick list with the placeholder "select a carrier". Lists only carriers that appear on shipments, with logos, sorted by name. Hidden from customers when the account hides carrier names from customers.
9	Customer	Pick list with the placeholder "select a customer" and the groups "Recently shipped" and "Recently selected". Lists only customers that have shipments. Hidden for carriers, and for customer users who have only one customer.
10	Rep	Pick list with the placeholder "select a team or user". Groups: "Recently selected" (last five) and "All". Teams and users can be picked. Owners and Members only.
11	Booked by	Same pick list. Owners and Members can pick any user or team; other users only themselves.
12	Covered by	Same as Booked by.

- Weeks start on Sunday. A preset covers the whole day from midnight to the end of the day.
- The footer shows an outlined blue button "See N shipments" with the number of matches (for example "See 118 shipments"; "See 1 shipment" for one; "See shipments" while the count is unknown). Clicking it closes the window.

SHP-010 Filter chips

Each filter set shows as a blue chip in the search box with an "x" to clear just that filter. Search text is printed in front of the chips and is not a chip.

Filter	Chip text
Booked, Pickup, Delivery date preset	"Booked this week", "Pickup this week", "Deliver this week" (preset in lower case)
Booked, Pickup, Delivery custom range	"Booked 10/1-10/9", "Pickup 10/1-10/9", "Deliver 10/1-10/9". A single day shows "Booked 10/1".
Origin, Destination	The area, for example "Dallas, TX"
Booked by	"Booked by" and the name
Covered by	"Covered by" and the name
Customer, Carrier, Rep	The selected name
Status, Equipment	The first value, then "+N" for the rest, for example "Booked +2" or "Dry Van +1"

SHP-011 Filters and sort are remembered

Filters and sort of each view are remembered while the user stays signed in on that browser tab; returning to a view restores it, including the scroll position. They are also written into the page address, so a bookmark or shared link reopens the same view. Date presets stay as words in the address ("This week"), so a bookmarked "This week" always means the current week. A link to the Active view can ask for a clean view, which clears remembered filters.

SHP-012 Scrolling and paging

- Active: one load of up to 1,000 rows, grouped, no paging.
- All and all queues: more rows load as you scroll; unloaded rows show a grey placeholder.
- The total count is shown by "See N shipments" and the queue counters.

SHP-013 Export to CSV

The Export button opens a small panel with the text "Export these shipments to a .CSV file." and a blue button "Export". The file contains every shipment matching the current filters and sort, not only the rows loaded on screen. Available on every view that has rows, including the queues.

- The button shows a loading state while the file is prepared. "Download will start soon" shows for 1.5 seconds; if the file cannot be made, "Download failed".

- File name: the account name, the word "Shipments", then date and time, for example `10-4 Global Shipments 2026-10-09-141530.csv`.
- Columns (the default set; an Owner can change it, section 4.9): Equipment, Carrier Name, USDOT, MC Number, Cost, Price, Profit, Margin, Pickup Date, Delivery Date, Origin Postal Code, Destination Postal Code, Total Weight, Mode.
- Customers export only their own shipments, with a fixed set of columns and no cost, profit or margin. The carrier name appears only when the account does not hide carriers from customers.

SHP-014 Empty, loading and error states

Situation	What the user sees
Loading	Spinner next to the title, grey placeholder rows.
All tab, filters set, no match	"No shipments found" (or `No shipments for "text" found` when searching) and a button "Reset filters".
Active tab, nothing to show	"No active shipments" (or `No active shipments for "text" found`) and a gray button "Switch to all shipments".
All tab, no filters, account has no shipments	"Let's add your first shipment." with the buttons "Create a shipment" and "Get LTL quotes".
Active tab with rows that are all filtered out	A dashed "+ shipment" link that opens the new shipment form.
Queue with nothing in it	A "document missing" icon and the text "No active shipments."
The list cannot be loaded	A visible error message with a way to try again, instead of an empty list.

SHP-015 What customers see on the list

Customer users (portal) see only their own shipments, in the simple list, with no carrier and cost column and no queues. They see the Customer filter only when they belong to more than one customer, never the Rep filter or the Scheduled-status toggle, and can use Booked by and Covered by only for themselves. They can export their own shipments (SHP-013). The portal is in section 4.11.

Work queues

SHP-016 How the queues work

Each queue is a short, fixed list answering "what do I need to do now?", with its own page and count badge in the left menu. Shared rules:

- Same rows as the Shipments list (SHP-003); the Quote queue lists quote requests instead (section 4.6).
- No search box, filter window or Active/All tabs; the filters are fixed by the queue.
- A "+" button next to the title creates a shipment. Export (when it has rows) and Sort (except Confirm deliveries).
- Rows are flat (no group headers) and have no attention stripe.

- The count badge always equals the number of rows. Queue rows show only for Owners and Members.

Queue	Page title	What lands in it	Default sort
Finish booking	Shipments to book	Truckload shipments in status Requested that a customer asked for through the portal and that have a pickup date today or later. The rep finishes and books them.	Pickup date, old to new
Quote	Shipments to quote	Quote requests from customers that staff still must price (section 4.6).	See section 4.6
Dispatch	Shipments to dispatch	LTL shipments in status Booked, where the carrier pickup request has not been completed.	Pickup date, old to new
Cover	Shipments to cover	Truckload shipments in status Booked that have no carrier yet.	Pickup date, old to new
Confirm pickups	Shipments to confirm pickups	Scheduled shipments (carrier assigned) whose pickup date is before today.	Pickup date, old to new
Confirm deliveries	Shipments to deliver	In transit shipments whose delivery date has passed and that are not yet marked delivered.	Delivery date, old to new, fixed

SHP-017 Cover queue ("Shipments to cover")

The rep opens a row and clicks the orange "Cover" card to assign a carrier (section 4.3). Rows show "N leads" or "No carrier" in the right block. A covered load becomes Scheduled and leaves the queue; dropping a carrier (section 4.3) puts it back.

SHP-018 Confirm pickups queue ("Shipments to confirm pickups")

The rep opens each load and confirms "Picked up" (section 4.4). The cut-off is the start of the user's own day. A row shows the carrier name and cost; a blue hourglass before the carrier name means the rate confirmation is not signed yet; a pickup alert icon can appear under the BOL. The menu label reads "Confirm pickup" when the count is 1.

SHP-019 Confirm deliveries queue ("Shipments to deliver")

All rows are already picked up, so the Pickup column is dimmed and shows the pickup time, and the origin dot is green. The Delivery column shows the date and "Appt @ time" when an appointment exists. The rep opens each load and confirms "Delivered" (section 4.4). The menu label reads "Confirm delivery" when the count is 1. No Sort button.

SHP-020 Dispatch queue ("Shipments to dispatch")

Rows are like the Cover queue but show "LTL" as equipment. The rep opens the load to complete the pickup request (section 4.6). The menu row is hidden when the queue is empty.

SHP-021 Finish booking queue ("Shipments to book")

Truckload shipment requests sent by customers from the portal (section 4.11) that a rep has not booked yet, in status Requested with a dashed grey dot. Opening a Requested shipment always opens its edit page, where

the rep checks the details, adds cost and price, and clicks "Book shipment". Requests with a pickup date in the past are not listed. Shipments saved for later by a rep (SHP-049) are not in this queue; they appear in the Active list under Requested.

SHP-022 Sidebar counters

Under "Find anything..." in the left menu is a block of queue rows, each with an orange count badge and the screen-reader text "outstanding tasks". Order: Finish booking, Quote, Dispatch, Cover, Confirm pickup(s), Confirm delivery/deliveries (see NTF-001 and NTF-002 for refresh rules). A sidebar counter for carriers waiting for approval is planned for later (the page "Approve & review carriers" is opened from the Carriers list, section 4.8).

- A row is hidden when its count is 0. The whole block shows when any row has a count above 0, including when only Confirm deliveries has work.
- The block shows only for Owners and Members.
- The row for the current page is highlighted; the "Shipments" row is not highlighted on a queue page.
- Counts refresh after any shipment action and when the page is opened.

Part B. Create, edit and duplicate a shipment

One form serves all three jobs. It is reached from the "+" next to "Shipments", from the "+ shipment" buttons on the dashboard and on customer pages (the customer is then pre-selected), from the pencil on the detail page, from "Reschedule", and from "Duplicate shipment" in the "..." menu.

Mode	Page title	Main button	"Save for later"
New	Book shipment	Book shipment	Yes
Duplicate	Book shipment	Book shipment	Yes
Edit a Requested shipment	Edit shipment	Book shipment	Yes
Edit a Booked, Scheduled, In transit or Delivered shipment	Edit shipment	Update shipment	No

The form always creates truckload-style shipments (mode "TL", including Auto Transport and every other non-LTL equipment type). LTL shipments are created from an LTL quote (section 4.6) and can then be edited with this form, which shows the LTL-only fields noted below.

Sections in order: header, Customer, Equipment (with "+ add vendor / carrier"), Locations, Items to be shipped, Cost & price, Hide contacts from carrier, Send updated documents (edit only), submit area. On edit and on wide screens, a right-hand column shows Notes and the Timeline (SHP-065, SHP-066).

Form header

SHP-023 Form header

Element	Rules
Title	"Book shipment" (new, duplicate) or "Edit shipment" (edit).
Back arrow	Edit only. Shown when the user came from the shipment's detail page or a quote page; returns there.
Status chip	Edit only. The current status.
"Created ... by ..." row	Edit only. "Created 8 days ago" and "by" the user's name (hover shows the user name). Reads "Quoted" instead of "Created" for a shipment booked from a quote. Hidden for a Requested shipment when the viewer is not an Owner or Member.
"..." menu	On edit only. One item, "Cancel", which opens the cancel window (SHP-072); offered only when the shipment can be canceled (Booked, Scheduled or In transit). New and duplicate forms have no menu.
Right column (edit, wide screens)	Notes and the Timeline (SHP-065, SHP-066).

SHP-024 Custom BOL number

A small field "Custom BOL" with the placeholder "#" sits in the header.

- The system assigns its own BOL number as soon as the shipment is saved, including shipments saved for later.
- A rep can type the shipper's own BOL number instead; it is shown as the BOL number everywhere and need not be unique.
- On edit the field shows the current BOL number and has a trash button; clearing it goes back to the system number. Tooltip when a value is present: "Clear this BOL number to go back to the system-generated one."
- If a custom number equals the system number, nothing is changed or logged.

Customer

SHP-025 Customer and contact

Field	Input	Required	Default	Rules and messages
Customer	Pick list, placeholder "select customer", user icon. Two groups: "Recent" (customers the user viewed lately, newest first) and "All". Typing filters the list.	Yes	Empty; or the customer from the link (for example "+ shipment" on a customer page); or the source shipment's customer on duplicate	When the typed text matches nothing, the first option reads "+ add {text}" (blue) and opens the new customer window (section 4.7). If the account restricts adding customers to Owners and the user is a Member, it reads "contact account owner to add customer" (orange) and does nothing. Choosing a customer clears the contact, copies the customer's billing address to the shipment, and loads that customer's credit state, contacts and margin limits. Empty: "Please fill out this field."
Contact	Pick list, label "Contact", placeholder "select contact". Each row shows the contact's full name and email on the right (or "no email" in italics). The first option is "+ add new contact" (or "+ add {text}" when typing), which opens the contact window (section 4.7).	No	The customer's first contact (lowest position) when it has an email	Optional. Requiring a contact to book is planned for later.
Credit badge	Small badge next to the customer	—	—	Always shown when the customer has a credit state. Details in section 4.7.

- On edit, customer and contact are plain text once the shipment is past Requested. To move a booked shipment to another customer, use "Change customer" (SHP-071).
- A customer user (portal) cannot change the customer; the form uses their own.

SHP-026 Booking disabled for a customer

When a customer's "Booking" switch is off (section 4.7), a card "Booking disabled" appears with the text "Customer has a booking hold" and a link to the customer page. "Booking is disabled." is added to the tooltip

of the "Book shipment" button, and the button is disabled. "Save for later" still works. Credit-limit blocking ("Enforce credit limits", off at go-live) is defined in PAY-022 and SET-020 (card texts: CUS-028, CUS-029); when it applies, a card shows the credit usage with "Request credit", "No credit", "Limit not set", "Edit Credit Limit" or "Add credit note" depending on the user and state.

Equipment

SHP-027 Equipment

The section heading is "Equipment".

Field	Input	Required	Default	Rules
Equipment	Pick list, placeholder "select equipment", carrier icon. 70 types, grouped (table below). Typing filters.	Yes	"Dry Van"	Choosing "Other" replaces the list with a free text field with the placeholder "Other name..." (aria "Equipment type name"). The list is locked (plain bold text) once a carrier is assigned or when the user cannot choose it.
Temperature low and high	Two numbers joined by " - ", placeholder 0, suffix "°F". Low cannot be above high.	No	Empty	Refrigerated equipment only.
Partial	Switch with the text "Partial allowed"	No	Off	Refrigerated, Dry Van and Flatbed groups. Disabled with a lock and the text "Locked after coverage" once a carrier is assigned.

Equipment types (70). Types with a size have a maximum item length × width × height in inches. An item larger than that is an error on the field; the system never silently changes the number.

Group	Types (max L × W × H in inches where defined)
LTL	LTL (630 × 100 × 103)
Dry Van	Dry Van (630 × 102 × 108), Dry Van 53 (630 × 102 × 108), Dry Van 48 (570 × 102 × 108), Straight Truck (420 × 96 × 144), Cargo Van (148 × 66 × 110), Dry Van or Refrigerated (630 × 102 × 108), Curtainside (630 × 102 × 108), Vented Van (630 × 102 × 108)
Flatbed	Flatbed, Flatbed 53, Flatbed 48, Step Deck, Flatbed or Step Deck, Double Drop, Removable Gooseneck, Conestoga (width 100, height 162), Stakebed, Step Deck Conestoga (width 100, height 162), Flatbed Hot Shot, Landoll Flatbed (570 × 102 × 108), Multi-Axle Heavy Haul
Refrigerated	Refrigerated (630 × 98 × 103.5), Refrigerated 53 (630 × 98 × 103.5), Refrigerated 48 (570 × 98 × 103.5), Refrigerated Straight Truck (420 × 96 × 144), Refrigerated Cargo Van (148 × 66 × 110)
Intermodal	Intermodal (473 × 93 × 92.5), Intermodal 20 (232 × 93 × 92.5), Intermodal 20 High Cube (232 × 93 × 104.5), Intermodal 40 (473 × 93 × 92.5), Intermodal 40 High Cube (473 × 93 × 104.5), Intermodal 40 Refrigerated (473 × 93 × 104.5), Intermodal 53 (630 × 102 × 108)
Drayage	Drayage (473 × 93 × 92.5), Drayage 20 (232 × 93 × 92.5), Drayage 20 High Cube (232 × 93 × 104.5), Drayage 20 Refrigerated (232 × 93 × 104.5), Drayage 40 (473 × 93 × 92.5), Drayage 40 High Cube (473 × 93 × 104.5), Drayage 40 Refrigerated (473 × 93 × 104.5)

Group	Types (max L × W × H in inches where defined)
Dump	Dump, Bottom Dump, End Dump, Side Dump
Dry Bulk	Dry Bulk, Hopper Bottom
Power Only	Power Only, Power Only Load Out, Power Only Tow Away
Driveaway	Driveaway, 2-way Deck, 3-way Deck, 4-way Deck, Boom, Box Truck, Heavy Duty, Non-CDL, Single, Tractor-trailer, Utility, Vocational
Auto Transport	Auto Transport, Open Auto Transport, Enclosed Auto Transport
Tanker	Tanker, Tanker Aluminum, Tanker Intermodal, Tanker Steel
Other	Other

SHP-028 Additional services

Switches under the equipment list, not shown for the Driveaway group. They stay editable after a carrier is assigned. The chosen services print as short notes in the detail page footer (SHP-063).

Switch	Shown for	Default
Tanker endorsement	Any truckload equipment	Off
Team service	Any equipment group	Off
Tarps	Flatbed group only	Off

SHP-029 "+ add vendor / carrier"

A dashed button "+ add vendor / carrier" (accessible name "Add another vendor") under the equipment card, for Owners and Members, opens a window with the label "Vendor type" and big selectable rows with an icon. Any number can be ticked; none at first. The blue button "Add vendor" is disabled until one is ticked.

Vendor type	First cost line description it adds
Chassis	Chassis
Crane	Crane
Customs broker	Customs clearance
Insurance	Insurance
Lumper	Lumpers
Steamship line	(blank)
Towing	Towing
Transloader	Transloading

Vendor type	First cost line description it adds
Warehouse	Storage

- Each ticked type adds a vendor card under the equipment card (type icon, type name, trash button) and one starter line in Cost & price with cost $0.00 and price $0.00 (blank for a Steamship line). The company itself is picked later on the detail page (SHP-059).
- A second freight carrier on the same load ("Carrier" as a vendor type, one set of stops per carrier) is not offered in the first version; carrier replacement uses "Drop carrier" (section 4.3).
- **Remove a vendor:** the trash button is greyed with the tooltip "Must remove selected vendor first" when a company is already selected. If the vendor has locations or cost/price amounts, a confirmation asks "Are you sure you want to remove this vendor?" with "These charges will be deleted:" and a small table (Description, Cost, Price); otherwise it is removed at once. Removing a vendor removes its lines.
- Up to 10 vendors per shipment.

Locations

SHP-030 Locations section

The heading is "Locations". On its right: "Distance:" with a number field and the suffix "mi". The system fills in the road distance once both ends of the route are known and refills it when a stop's place changes. A typed number wins. If the route cannot be calculated, the shipment still saves and the distance stays empty.

A "Reorder locations" button (two arrows, also in each stop header) opens the "Reorder Locations" window: a drag-and-drop list with the heading "Locations". Each row shows a drag handle, the company name (or "new location") and "City, ST ZIP". Hovering a row shows "Duplicate" (adds a copy right after) and "Remove".

A vertical line connects the cards. A new form starts with two stops (Pickup and Delivery) and cannot go below two.

SHP-031 Stop card

Each stop is a card with a numbered circle and the title "Pickup" (first stop), "Delivery" (last) or "Stop" (between). The header has the reorder button and a trash button (accessible name "Remove location N") shown only with more than two stops.

#	Field	Input	Required	Default	Rules and messages
1	Company name	Text with address book suggestions (SHP-032). Trash icon inside the field clears the company and address but keeps date, references, Share BOL and appointment.	Yes	Empty	Empty: "Please fill out this field."
2	Location type	Pick list, 26 types (SHP-032)	Yes	Business with dock/forklift	

#	Field	Input	Required	Default	Rules and messages
3	Show name and Booth #	Two text fields	Yes (both)	Empty	Only when the location type is Convention/trade show.
4	Address	Text with street suggestions	Yes	Empty	Choosing a suggestion fills street, city, state, ZIP, country and time zone.
5	"+ Address 2"	Link revealing a second street line, label "Address 2" with "(optional)" and a trash button	No	Hidden	Opens automatically when a second line has text.
6	City, province, postal code	Place search. Label "City, province, postal code" while empty, "City, state, zip" once a U.S. place is chosen. Country flag at the right.	Yes	Empty	Choosing a place fills city, state, ZIP, country, county and time zone.
7	Contact name	Text	Yes	Empty	
8	Contact phone	Phone field with a country flag and the mask (000) 000-0000	Yes	Empty	Must be a full number.
9	Contact email	Chip field, placeholder "add email", with suggestions from the customer's contacts. Each chip has a trash icon. Label shows " (optional)" when Share BOL is off.	Yes when Share BOL is on	Empty	
10	Share BOL	Switch	No	On for the first stop, off for the others; copied from the address book entry when one is chosen	When on, the BOL is emailed to the listed emails on booking and with "Send updated documents" (SHP-048).
11	Instructions	Multi-line text, label "Pickup instructions", "Delivery instructions" or "Stop instructions", with " (optional)" and placeholder "optional"	No	Empty	
12	Open time	Time field. Accepts "8", "8a", "0800".	Yes	8:00 AM	
13	Close time	Time field	Yes	5:00 PM	Empty: "Close time is required".

#	Field	Input	Required	Default	Rules and messages
14	Pickup date (first stop)	Date field with a calendar button (accessible name "Open arrival date calendar for location N"). "mm/dd/yyyy" when empty, "Fri, Oct 2" when filled. Label "Pickup date".	Yes	Empty (new, duplicate), saved date (edit)	See SHP-035.
15	Arrival date (other stops)	Same field, label "Arrival date"	No	The previous stop's date plus the transit days of the route leg, when known and not set by hand	Not before the previous stop's date: "Date of this location is before a previous location."
16	Appointment	Button, see SHP-034	No	"add appointment"	Truckload stops only.
17	Reference #	Rows of kind and value, see SHP-033	No	Stop 1: "PO" and "Pickup". Other stops: "Order".	
18	"+ private note"	Link opening a three-line text box (placeholder "optional"). Enter without Shift or Escape closes it; a green check saves it.	No	Empty	Owners and Members only. Once filled, a note icon with the tooltip "Private note" shows the text in a grey bar with a pencil to edit. Carriers and customers never see it.

SHP-032 Address book, location types

- Typing in "Company name" suggests places from the selected customer's address book (up to 5, narrowed to the chosen city when set). Each suggestion shows the company in bold (matches highlighted), small tags (for example "pickup, delivery"), the address, the instructions, the contact name and "9:00am - 5:00pm".
- Choosing a suggestion fills the whole card: company, location type, services, Share BOL, address, hours, contact, phone, emails, instructions, show name and booth, private note.
- A stop linked to an address book entry shows a small address book icon in the field: grey when the card matches the entry, orange when it differs. Hovering the orange icon shows "What's changed?" and a comma list of the differences. Clicking it opens the address book entry window (section 4.7).
- Saving a booking does not create address book entries; it only updates the "last used" date of linked entries.

Location types (26): Airport; Business with dock/forklift; Business without dock/forklift; Camp; Church building; Construction site; Container freight station; Convention/trade show; Country club; Fair/amusement park; Farm; Government site; Grocery warehouse; Hospital; Hotel; Limited access; Military installation; Mine site; Native American reservation; Nursing home; Pier; Prison; Residential; School; Self-storage; Utility site.

SHP-033 Reference numbers on a stop

Each reference row has a kind pick list and a value field (placeholder "optional" on the first row, "12345" on later rows). A link "+add ref" adds a row with kind "Ref"; the trash button on rows after the first removes a row.

Rows with an empty value are dropped on save. The first stop always keeps a "Pickup" row unless the rep deletes it.

Reference kinds (41): Appointment; AWB; Booking; Client; Confirmation; Container; Customer BOL; Delivery; Doc Cutoff; Document; ERD; ETD; Flight; Inbound; Item (Buyer); Item (Seller); Invoice; Job; Load; LRD; Ocean BOL; Order; Outbound; Part; Pickup; PO; Port; Reservation; Ref; Relay Code; Sales Order; Scale Ticket; Seal; Serial; Show; SKU; Steamship Line; Tax ID; Vendor; Vessel; VIN.

SHP-034 Appointment

The "Appointment" button shows "add appointment" when empty and "#12345 @ 9:00 AM" when set, and opens a small window.

Field	Input	Required	Notes
Appointment time	Time field	Yes	The date is the stop's date.
Appointment # or ID	Text, placeholder "12345"	No	
"Cancel appt"	Red outlined button	—	Only when an appointment exists; removes it.
"Save"	Blue button	—	Saves the appointment.

On the form the appointment is saved with the shipment; on the detail page it is saved right away (section 4.4).

SHP-035 Hours and date rules

- Pickup date: a truckload pickup can be up to 180 days ahead; later shows "Pickup date must be less than 180 days in the future". A truckload pickup may be in the past (a load that already moved), with the notice in SHP-036. LTL pickups: up to 31 days ahead, no past dates ("Pickup date must not be in the past"), weekends and holidays blocked ("This date is unavailable").
- Arrival date: not before the previous stop's date.
- LTL stops: the close time must be at least 2 hours after the open time ("Close time must be at least 2 hours after open time."). For an LTL pickup not booked yet, "Origin is already closed." or "Close time of origin must be more than 1 hour from now." can show.
- After a shipment is booked, editing no longer enforces the pickup date limits (past or too far ahead), but the order of stop dates is still enforced.

SHP-036 Notices inside a stop card

Yellow notes with a bold "Note:" or "Reminder:" label. They never block saving.

Text	When
Reminder: Appointment noted in instructions. Do you need to toggle Appointment Required?	LTL delivery whose instructions mention "appointment" or "appt" while the appointment service is off
Closes next day (time)	Close time is earlier than open time

Text	When
Currently closed.	Truckload; the close time has passed for the stop's date and time zone
Closing within the hour, be sure carrier can make it.	Truckload; closes in less than 60 minutes
Closing in less than 4 hours from now, be sure carrier can make it.	Closes in 1 to 4 hours
Close time is less than 4 hours from open time, so be sure the carrier can make it.	The open window is under 4 hours
This date falls on a holiday or weekend.	Truckload date is a weekend or holiday
This date is in the past. Are you sure you want to backdate this?	Truckload date is before today
This date is a holiday for some carriers	LTL date is a holiday

SHP-037 Add and remove stops

A dashed button "+ add location" (accessible name "Add another location") adds a stop after the last one, dated one day after the latest stop date, with the reference row "Order". Truckload only. When the load already has a pickup and a delivery, the new stop offers "Duplicate previous location" (a copy of the previous stop) and "New blank" (an empty stop). The new stop becomes the "Delivery" and the previous last stop becomes a "Stop". The trash button removes a stop when there are more than two. Shipments with more than two stops, a trade show stop or a hazmat item are supported.

Items to be shipped

SHP-038 Items section

The heading is "Items to be shipped". A new form starts with one empty item card. A dashed button "+ add more" (the first reads "+ add"; accessible name "Add another handling unit") adds a card. The trash button in a card header removes an item when there is more than one.

When any stop has the location type "Convention/trade show", a blue banner says "Trade show shipments are usually freight class 125." with a link "Why?" explaining: "Freight moving to or from a trade show is almost always Freight class 125 and NMFC 154630." Items added after that start with class 125 and NMFC 154630.

With more than two stops, each item also shows "Picking up at" and "Delivering to" pick lists, listing the stops by company name (or "New location"); the delivery list offers only stops after the chosen pickup. With exactly two stops, items go from the first stop to the last automatically. A shipment cannot be booked with no items.

The card header shows a bold summary ("4 totes", "2 pallets"), a red hazmat icon when Hazmat is on, and the item's total weight ("10,044 lb") on the right.

SHP-039 Item card fields

Field	Input	Required	Default	Rules and messages
Description	Text with suggestions from the customer's previously shipped products (up to 5). Label "Description"; with Hazmat on, "Proper shipping name and hazmat quantity".	Yes	Empty	Choosing a suggestion copies its packaging, class, dimensions, stackable and hazmat settings and contents.
Contains	Number (minimum 1) and a unit pick list (placeholder "unit")	Both required when Hazmat is on, or on LTL when either is set	Empty	Units: Bag, Bale, Box, Bundle, Carpet, Carton, Case, Coil, Crate, Cylinder, Drum, Gallon, Keg, Pail, Piece, Pipe, Rack, Reel, Roll, Sack, Tote, Tube (plural when the number is not 1).
Packaging	Pick list, label "Packaging"	LTL only	Empty	Options: Pallet (48×40), Pallet (48×48), Pallet (60×48), Pallet, Bag, Bale, Box, Bundle, Carpet, Carton, Case, Coil, Crate, Cylinder, Drum, Gallon, Keg, Pail, Piece, Pipe, Rack, Reel, Roll, Sack, Skid, Tote, Tube. A sized pallet fills length and width; the size is not kept (stored as "Pallet").
Quantity	Whole number (minimum 1), label "Quantity"	LTL only	Empty	
Dimensions	Three numbers with placeholders "L", "W", "H" and a unit pick list ("in" or "cm"). Label "Dimensions".	LTL; for truckload, if any of the three is filled, all three are required	Empty, unit "in"	An item larger than the equipment's maximum (SHP-027) shows an error on the field. Once length, width, height and quantity are set, a chip at the right shows volume and density, for example "200 cf 50.22 pcf".
Total weight	Whole number (minimum 0), label "Total weight", unit pick list ("lb" or "kg")	Yes	Empty, unit "lb"	For the whole item line, not per piece.
Freight class	Pick list, label "Freight class"	LTL only	Empty	Classes: 50, 55, 60, 65, 70, 77.5, 85, 92.5, 100, 110, 125, 150, 175, 200, 250, 300, 400, 500. While empty, a chip "Est: 85" suggests a class from the item's weight and size; clicking fills it. Tooltip: the estimate is based on the dimensions and weight entered.
NMFC	Text, label "NMFC"	No	Empty	LTL only. 4 to 6 digits, optionally followed by a dash and 1 or 2 digits; otherwise "NMFC must be 4-6 digits optionally followed by a dash and additional 1-2 digits".
Stackable	Check box "Stackable"	No	Off	
Hazmat	Check box "Hazmat"	No	Off	Opens the hazmat row (SHP-040).

SHP-040 Hazmat item

Ticking Hazmat adds a row with a red top border under the item:

Field	Input	Required	Rules
UN #	Text, 4 digits	Yes	"UN # must be a 4 digit number"
Hazmat class	Pick list (filterable)	Yes	Classes: 1.1 - Explosive; 1.2 - Explosive; 1.3 - Explosive; 1.4B - Explosive; 1.4C - Explosive; 1.4D - Explosive; 1.4E - Explosive; 1.4F - Explosive; 1.4G - Explosive; 1.4S - Explosive; 1.5 - Blasting Agent; 1.6 - Insensitive Detonating Substance; 2.1 - Flammable Gas; 2.2 - Non-Flammable Gas; 2.3 - Poisonous Gas; 3 - Flammable Liquid; 3.1 - Flammable Liquid; 3.2 - Flammable Liquid; 3.3 - Flammable Liquid; 4.1 - Flammable Solid; 4.2 - Spontaneously Combustable Material; 4.3 - Dangerous When Wet; 5.1 - Oxidizer; 5.2 - Organic Peroxide; 6.1 - Toxic Substances; 6.2 - Poisonous Material; 7 - Radioactive Material; 8 - Corrosive Material; 9 - Miscellaneous Hazardous Material; 9.1 - Miscellaneous Dangerous Goods; 9.2 - Environmentally Hazardous Substance
Packing group	Pick list: I, II, III	No	

The form also shows a section "Hazmat contact" with "Emergency phone" (required, U.S. phone), "Emergency contact company" (required) and "Contract #". Contains quantity and unit become required for the item.

SHP-079 Customs broker (cross-border loads)

When the route crosses a border (for example a stop in Canada or Mexico), the form shows a section "Customs broker". Mexico settlement (neighborhood) fields are planned for later.

Field	Input	Required	Rules
Company name	Text	Yes	Empty: "Please fill out this field."
Contact name	Text	No	
Phone	Phone field, U.S. format	Yes	Must be a full number.

This is separate from the "Customs broker" vendor type (SHP-029), which only adds charges to the load.

SHP-041 Auto Transport and vehicle items

Auto Transport loads (equipment Auto Transport, Open Auto Transport, Enclosed Auto Transport) carry one item line per vehicle.

- The description holds the vehicle year, make and model and the VIN, for example "2025 Make Model VIN: 17 characters".
- Packaging, quantity and per-item dimensions are not needed. Weight per vehicle is required.
- For Auto Transport (and Flatbed, Power Only, Other) the total-size row shows "Total dimensions" with Length, Width and Height; width and height are required. Inches are usual for vehicles, for example 232" L × 82" W × 79" H.

- A "VIN" reference can also be entered on a stop (SHP-033).

SHP-042 Total length, totals and total value

Under the item cards:

Element	Behaviour
Total length	Number with a length icon (tooltip "Total length", or "Total dimensions" for Flatbed, Power Only, Auto Transport and Other), unit "ft" or "in", placeholder "L". Maximum is the equipment's length. Required when "Partial allowed" is on; the orange message "Total length needed for partial quote" shows beside it.
"Common: N' L" hint	Under Total length, a common trailer length for the equipment, for example "Common: 53' L".
"Est:" chip	"Est: 8", the estimated linear feet from the item sizes. Tooltip: "Linear feet estimate is based on the dimensions you entered. If the shipment takes up more space in the trailer, the carrier may charge more. Click to use estimate." Clicking copies it into Total length.
Linear feet visualizer	An icon button "Linear Feet Visualizer" opens a side panel drawing each item along the trailer, with "Estimated total length" and the foot count.
Totals	Package name and count ("Totes 4"), "Volume 200 cf", "Density 50.22 pcf", "Weight 10,044 lb". Only non-zero values show. For LTL volume quotes: "Enter total length for volume quotes".
Total value	Currency field "Total value", placeholder "$". Required only if the account turns on "value required for truckload" (off for 10-4). Hints on blur: for round values of $25,000, $50,000, $100,000, $150,000, $200,000 or $250,000, "Is the total value EXACTLY $25,000.00?" (with the typed amount); for a value under $101, "Total value seems low. Are you sure it's correct?".

Cost & price

SHP-043 Cost & price block

For Owners and Members only; customers and carriers never see it. The heading is "Cost & price". One group of lines per vendor on the shipment (the freight carrier first, then the others).

Column headers: "Description", then "Target cost" and "Price". The cost column is "Target cost" while the shipment is New, Duplicate, Requested or Booked, and "Cost" once Scheduled or later (or LTL). With several vendors, the first header shows the vendor's name once a company is picked, or "Towing (TBD)", "Lumper (TBD)" and so on before.

Field	Input	Required	Rules
Description	Pick list that also accepts free text, placeholder "Description...". Row 1 of the freight group is fixed read-only text "Freight" with no trash. A pencil icon opens a small note box; the note shows as "Description - note".	Yes	See the charge list below.

Field	Input	Required	Rules
Target cost / Cost	Currency, placeholder "$0.00". A calculator icon opens the cost calculator (SHP-044).	Yes on the first row; on other rows required when the price is empty	When the cost is exactly $0.00, a trash icon with the tooltip "Hide from rate con" appears: clicking it clears the cost so the line stays on the customer invoice but is left off the carrier rate confirmation.
Price	Currency, placeholder "$0.00". A calculator icon opens the price calculator (SHP-044).	Yes on the first row; on other rows required when the cost is empty	When the price is exactly $0.00, a trash icon with the tooltip "Hide from invoice" appears: clicking it clears the price so the line is left off the customer invoice.
"+ add item"	Blue link under each group	—	Adds a line with cost $0.00 and price $0.00. Accessible name "Add another line item" (or "... for vendor N (Type)").
Trash on a line	Tooltip "Remove line item"	—	Not on the first row of a group.

- A group with more than one line shows a subtotal of cost and price; with several vendors a grand total row shows too. The shipment's money total is the sum of the lines.
- A cost or price for a vendor whose bill has a balance shows a small payment icon with "Payment $x / Balance $y".

Charge descriptions (147): Access fee, Accessorial, Additional fee, Adjustment, Advance, After-hours delivery, After-hours pickup, All risk insurance, Animal control, Appointment, Attempted delivery, Attempted pickup, Below minimum, Blind shipment, BOL correction, Bonded fee, California compliance, Canceled, Cargo insurance, Chains, Charge, Chassis, Chassis split, Construction site delivery, Construction site pickup, Container return, Container rejected, Convenience fee, Coordination, Country club delivery, Country club pickup, Country club, Courtesy credit, Crane, Credit card fee, Credit, Cross dock, Cubic capacity minimum, Currency conversion, Customs clearance, Damage, Deadhead, Decking, Deficit weight, Delivery fee, Demurrage, Detention delivery, Detention pickup, Detention, Discount, Driver, Driver 2, Driver 3, Driver 4, Driver assist, Driver unload, Drop trailer, Dry run, Duties & taxes, Escort, Excessive length, Extra delivery, Extra pickup, Extreme length, Freight, Fuel advance, Fuel, Full value coverage, Gate fee, Government site delivery, Government site pickup, Handling, Hazmat, High cost delivery, High value, Holiday delivery, Holiday pickup, Inside delivery, Inside pickup, Inspection, Insurance, Invoice correction, Labor, Late delivery, Late fee, Layover, Liftgate delivery, Liftgate pickup, Liftgate, Limited access delivery, Limited access pickup, Limited access, Linear foot rule surcharge, Linehaul, Lumpers, Mileage adjustment, Multi-stop, No scale tickets, Notify before delivery, Overheight, Overlength, Oversize, Overweight, Overwidth, Pallet exchange, Permits, Port congestion, Pre-pull, Prison delivery, Prison pickup, Protect from freeze, Quick pay, Re-palletizing, Reclass & reweigh, Reclass, Reconsignment, Redelivery, Rerouting, Residential delivery, Residential pickup, Residential, Restocking, Return, Reweigh, Reworking, Scale tickets, School delivery, School pickup, Sort & segregate, Stopoff, Storage, Tarps, Tanker wash, Team drivers, Temperature control, Terminal fee, Tolls, Towing, Tracking non-compliance, Trade show, Trailer wash, Translating, Transloading, Truck ordered not used, Weekend delivery, Yard pull, Yard storage.

SHP-044 Calculators

- **Cost calculator** (calculator icon in the cost cell), shown when the route distance is known: "Cost per mile", "N miles" and one number field. A per-mile rate sets cost = rate × distance, rounded to cents; typing a cost shows the rate.
- **Price calculator** (calculator icon in the price cell), shown when a cost exists:
  - "Est." (blue button, when the price is empty): suggests the price from the cost using the margin rule in SHP-077; clicking fills the price.
  - "Margin" in percent: shows the current margin; typing one sets the price using the margin rule.
  - "Cost +" in percent (markup): price = cost + cost × value.
  - "Profit" in dollars: price = cost + profit.
  - All results are rounded to cents. The default margin shown is the customer's default (or the account default, 25 percent for 10-4).

SHP-045 Margin strip and margin rule

Under the lines, a strip shows three figures for the whole shipment:

Figure	Formula	Display
Margin	(price – cost) ÷ price	Percent with up to 2 decimals, for example "46.67%". "-%" until a cost and a price exist.
Cost+	(price – cost) ÷ cost	Whole percent, for example "88%".
Profit	price – cost	Dollars, for example "$700.00". "$-" when empty.

SHP-077 Margin rule

When the system suggests a price from a cost and a margin: price = the larger of (cost ÷ (1 – margin)) and (cost + the minimum profit). The minimum profit comes from the customer's settings (or the account's). A margin of 0/0 shows "$0.00".

SHP-078 Margin and profit limits

Each customer (or the account) can have a minimum and maximum margin and a minimum and maximum profit per load (section 4.7).

- Owners are never blocked. A figure outside the limits turns orange, with a warning icon and a message.
- Members are blocked: a figure outside the limits turns red, and "Book shipment" and "Update shipment" are refused, both on the form and again when the shipment is saved. "Save for later" skips all checks.
- Messages (popover on the warning icon):

Condition	Message
Cost below zero	Cost is too low.
Cost above price	Target cost is above price.
Margin above 100 percent	Margin is too high.

Condition	Message
Margin warning (Owner)	Above target margin: N% / Below target margin: N% (without the number when no limit is set)
Margin error (Member)	Margin must be below: N% / Margin must be above: N% (Margin is too high / Margin is too low when no limit is set)
Profit warning (Owner)	Above target profit: $X / Below target profit: $X
Profit error (Member)	Profit must be below: $X / Profit must be above: $X (Profit is too high / Profit is too low)

SHP-046 Lane history price hint (truckload)

A small line with a route icon sits next to the "Cost & price" heading.

State	Text
First stop, last stop or equipment missing	"For lane data add locations & equipment type" (grey)
Loading	Route icon and a spinner
Cannot be loaded	"Can't fetch lane data" (red)
No history	"This is a new Dry Van lane for you" (the equipment group is named)
History found	Blue "History" and a dollar figure, for example "History $716".

The figure is the average cost per mile that 10-4's own covered truckload shipments paid on that lane, times the distance (or the average cost when the distance is unknown), rounded to whole dollars. History covers loads that started within 100 miles of the origin, ended near the destination, and ran in the last 6 months on the same lane and direction. Clicking it opens a "lane history" window (sections 4.3 and 4.9) with Origin, Destination, Equipment, Radius "100 mi", History "6 months", and the line "Average cost for N mi" with "$X / $Y per mi", or "This is a new lane for you". The button's accessible name is "View lane history details". No outside load board rate is shown in the first version.

Other form blocks, saving and errors

SHP-047 Hide contacts from carrier

A card with an eye icon: "Hide contacts from carrier", with a switch "Hide contacts". Default off for a new shipment; copied on duplicate and edit. When on, carrier-facing documents and pages do not show the stop contacts. Truckload only. On the detail page, stops hidden this way show "Hidden from carrier".

SHP-048 Send updated documents (edit only)

On edit, a card "Send updated documents" (a pulsing refresh icon) appears when there is something to send, with up to two switches.

Switch	Shown when	Default	What happens on save
Rate Con	A carrier with a contact is assigned and not waiting for approval (truckload)	Off	The updated rate confirmation is sent to the carrier contact (hover shows "Carrier contact(s)" with name and email).
BOL (with the number of recipients, for example "2 BOL")	At least one stop has Share BOL on with a contact name and emails	On	The updated BOL is emailed to those contacts (hover shows "Location contacts").

The card shows who will receive each document, so a routine edit never emails anyone unexpectedly. Documents: section 6; emails: section 5.

SHP-049 Book shipment and Save for later

- **Book shipment** (big blue button, full width). Runs all checks. On success the system saves the shipment, books it in one step, assigns the BOL number, emails the BOL to every stop with Share BOL on and listed emails, and opens the detail page. Pop-up message "Shipment booked". If any part fails, nothing is half-booked.
- **Save for later** (small grey outlined button, right). Saves a draft in status Requested without checking required fields. Pop-up message "Shipment created"; the edit page opens. The draft stays in the Active list under Requested and can be booked later from its edit page. Disabled with the tooltip "Origin or destination is missing." if there are fewer than two stops.
- A booked shipment cannot go back to a draft.
- Pressing Enter in a field does not submit the form (except in a multi-line box). Clicking "Book shipment" with errors scrolls to and focuses the first field with an error. Each required field shows a message under its label after the first click ("Please fill out this field." unless another message is listed above).
- A shipment needs two or more stops, an origin before the destination, and at least one item. The tooltip on a disabled "Book shipment" button says "Origin or destination is missing." (and "Booking is disabled." when the customer is on a hold).
- The system also checks that a partial load has a total length, and that an LTL item with contents has both a number and a unit.
- Footnote under the buttons: "Pickup, transit and delivery dates are estimated." (LTL: "Pickup dates not guaranteed. Transit times and delivery dates are estimated.")
- A double-click or repeated request creates only one shipment.

SHP-050 Validation messages on the form

Where	Message
Any required field	Please fill out this field.
Close time empty	Close time is required
Arrival before previous stop	Date of this location is before a previous location.
Pickup too far ahead	Pickup date must be less than 180 days in the future

Where	Message
Date unavailable (LTL)	This date is unavailable
Date in the past (LTL)	Pickup date must not be in the past
LTL close time	Close time must be at least 2 hours after open time.
UN number	UN # must be a 4 digit number
NMFC	NMFC must be 4-6 digits optionally followed by a dash and additional 1-2 digits
Partial load	Total length needed for partial quote
Stops	Origin or destination is missing. / Each carrier must have an origin and destination.
Items	At least one item is needed to book
Margin or profit limit (Member)	See SHP-078

SHP-051 Errors on save and the stale-edit warning

A red banner shows at the top of the form when saving fails.

- "Error booking shipment" when booking fails (with the reason from the system); "Error updating shipment" when an edit fails.
- If someone else changed the shipment after this form was opened, the save is refused: the banner "Error updating shipment" shows "Previous changes detected" with a button "Reload shipment", which reloads the latest version (unsaved edits are replaced). This also applies to every change made from the detail page (cost and price, customer, vendors, cancel). A failed save does not change the page you see.
- Successful saves show a pop-up message: "Shipment created" (draft saved), "Shipment booked", or "Shipment updated".
- If the shipment cannot be found, the page shows "Error loading shipment", "The shipment you're looking for is missing." and a button "Quote again".

Edit and duplicate

SHP-052 What can be edited, by status

Item	Requested	Booked, Scheduled, In transit, Delivered
Customer and contact	Editable	Read-only text. Use "Change customer" (SHP-071).
Equipment	Editable	Locked once a carrier is assigned; the "Partial allowed" switch also locks ("Locked after coverage"). Tanker endorsement and Team service stay editable.
Stops, items, references, cost and price	Editable	Editable. A canceled shipment cannot be edited (the pencil is hidden).
Custom BOL	Editable	Editable

Item	Requested	Booked, Scheduled, In transit, Delivered
Hide contacts, Send updated documents	Editable	Editable
Save for later	Yes	No
Date limits	Enforced	Not enforced; date order still is

- Editing the cost and price of a shipment with a signed carrier rate confirmation sends it back to the carrier for re-confirmation (section 4.3).
- Editing a delivered shipment is allowed (for example to fix a reference or an amount).
- "Reschedule" on the detail page opens this edit page.

SHP-053 Duplicate a shipment

"Duplicate shipment" (SHP-070) opens the form pre-filled from an existing truckload shipment and saves a brand-new shipment.

- **Copied:** customer and contact, equipment and services, stops (company, address, contact, hours, instructions, Share BOL, notes), items, cost and price lines (without the "Canceled" lines created by a cancel), and the Hide contacts setting.
- **Not copied:** stop dates, reference values (the kinds stay, values empty), appointments, the custom BOL number (a new system number is assigned), the carrier and rate confirmation, tracking, documents, notes and timeline. If a carrier was dropped on the source, the dropped carrier's vendor and its lines are left out.
- The distance field starts empty and fills in once the route is calculated.
- The new shipment remembers its source. While the source has an unpaid balance and no proof of delivery, the new shipment's detail page shows the orange banner "Do not touch, waiting on POD".
- The usual form rules apply: the rep enters dates and can book or save for later.

Part C. Shipment detail page

The detail page is the single record of one load. It is reached from any list or queue row, the dashboard, customer and carrier pages, search results, bill lists, and after booking. The browser tab reads "BOL 1000123 | 10-4 TMS". The page address uses the shipment's own id, not the BOL number. A Requested shipment never opens the detail page; it opens its edit page (SHP-021).

On wide screens the page has two columns (left about two thirds, right one third); on narrow screens the right column moves below and the map to the top. Left column, top to bottom: banners, header, stepper, summary cards, Cost & Price strip, Locations, Items. Right column: map, notes, Timeline.

SHP-068 Loading, not found and error states

"Loading shipment details" with a centered spinner while loading. "The page you're looking for is missing." with a button "Back home" when the shipment does not exist or the user may not see it (a shipment of another customer or account shows as not found). If the page cannot be drawn, a "Something went wrong" page with a Home button.

SHP-054 Header

Element	Rules
Title	"BOL 1000123". Screen-reader text "Shipment details for BOL 1000123".
"Documents" chip	Owners and Members. Opens the documents page (section 6). Customers and carriers see "BOL" and "Labels" buttons instead; the "BOL" button has a green check when the BOL was sent after its last change, and an orange warning icon when it changed since it was last sent.
Pencil ("Edit shipment")	Owners and Members. Opens the edit form. Hidden on Canceled shipments.
"..." menu	Always shown (accessible name "Open shipment action menu"). See SHP-069.
Reps	At the top right. Avatars of the reps on the load; click opens "Reps on BOL" (SHP-074). Accessible name "Manage reps"; the word "Reps" is for screen readers only.
Banner "Do not touch, waiting on POD"	A pulsing orange card on a shipment created by duplicating another one, while the source still has an unpaid customer balance and no proof of delivery (SHP-053).
Banner "POD is required"	An orange-outlined card with a pill "Upload POD", for Owners and Members when the load is delivered, the customer requires POD, the invoice is not paid, and no POD is uploaded (sections 4.4, 4.5).

SHP-055 Status stepper

Under the header is a row of segments, one per stage. Past stages have a dark bar and a grey time stamp under the label; the present stage is highlighted; future stages are plain. Hovering a past stage shows the exact date and time, an extra line and the user who did it.

Segment	Shown when	Label now → label once done	Time stamp from	Hover extras
Quote	The shipment was booked from an LTL quote	Quote → Quoted	When the quote was made	"Quote" and its number or "No quote number"; "Pallet rate" or "Volume quote"
Book	Always	Book → Booked	Booking time	"BOL" and number; who booked
Cover	Owners and Members; truckload with a manually covered carrier	Cover → Scheduled	When the carrier was assigned	"Pickup" number; who covered
Dispatch	Owners and Members; LTL with a carrier quote	Dispatch → Scheduled	When the pickup request completed	"Pickup" number; "Manually dispatched" or "Auto dispatched"
Pick up	Always	Pick up → In transit	Pickup time	"PRO" number
Deliver	Always	Deliver → Delivered	Delivery time	—

- Booked and needs a carrier: Booked (done), Cover (present), Pick up, Deliver. Scheduled: Booked, Scheduled, Pick up (present), Deliver. In transit: Booked, Scheduled, In transit, Deliver (present). Delivered: all done, the last "Delivered" with a green bar. An LTL load from a quote shows five segments starting with Quoted.
- **Present stage:** Book if not booked. After booking, Cover for a truckload without a carrier. With a carrier: Pick up until the first stop is picked up, then Deliver until the last stop is delivered, then complete. For LTL, Dispatch while the pickup request is pending, failed or aborted.
- Time stamps read "6 hours ago" or "1 day ago" when under two days old, otherwise "Oct 9" (or "Oct 9, 2025" in another year).
- **Canceled:** a row above the bar shows a red icon, the red word "Canceled" and grey text such as "15 days ago by ". Present and future labels are crossed out; only the Booked segment stays done. Customers and carriers never see the Cover or Dispatch segment.
- **Needs-attention marker:** on a Scheduled load whose pickup date is before today, the first stop gets an orange dashed border and an orange warning before its date with the tooltip "This should have been picked up by now." and "Check to see if it's in transit or needs to be rescheduled.". The "Picked up" button turns orange (section 4.4).

SHP-056 Customer card

A white card on the right of the carrier card. Clicking its header opens the customer page (accessible name "View {customer name} details").

Element	Rules
Customer name, contact full name	Shown.
Credit badge	Always shown when the customer has a credit state (section 4.7).

Element	Rules
"+ invoice reference"	Owners and Members. Opens the "Invoice-only reference" window (SHP-057). Once references exist, the link is replaced by a list of "kind value" rows with a pencil on hover; carriers and customers see the list read-only.
"Confirmation"	Outlined pill that opens the customer's rate confirmation document (section 6). Only when that document exists.
"Invoice" / "+ Create invoice"	Outlined pill, when the account has accounting turned on. Hidden for a truckload shipment still Booked or Requested. "+ Create invoice" (blue) creates the customer invoice and opens it; otherwise "Invoice" opens the invoice page (section 4.5). Icon: orange chat icon when the invoice is in dispute, green check when the balance is zero, orange triangle when the invoice is still a draft and the shipment is delivered; gray otherwise. Its accessible name shows the invoice state ("View draft invoice", "Record payment", "Invoice paid in full").

Booking a shipment creates a draft customer invoice with the BOL number as its reference number, and copies the customer's reps onto the shipment (SHP-074).

SHP-057 Invoice-only reference

A window with a receipt icon, the title "Invoice-only reference" and the text "These reference numbers will only show up on the customer invoice."

Field	Input	Notes
Kind	Pick list: Accessorial, Authorization, Reference, Shipment	Default "Reference" on a new row
Value	Text, up to 100 characters	Rows with an empty value are dropped
Trash	Removes the row (accessible name "Remove reference")	
"+ reference"	Adds a row	Up to 20 rows
"Save"	Full-width blue button	On failure: "Unable to update reference number". Not allowed on a voided invoice.

These print on the customer invoice only (section 4.5); they are not sent to the carrier.

SHP-058 Carrier side of the page

Next to the customer card is the carrier area:

Shipment state	What shows
Booked, truckload, no carrier	A dashed grey "Cover" card: equipment icon and name, temperature range for reefers, "Partial" tag when allowed, "Target $800.00", and an orange "Cover" button. The whole card opens the cover screen (section 4.3).

Shipment state	What shows
Scheduled, In transit, Delivered (truckload)	The carrier card: a status dot (red "Don't use", grey "Candidate"; none when approved), carrier name, equipment (prefix "Partial" when partial), contact name with call and email icons and copy buttons, then the "Rate con" and "Bill" pills. Clicking opens the carrier detail window with a "Remove carrier" button (section 4.3).
LTL with a carrier	Carrier logo, service ("Standard", "Volume", guaranteed), carrier name, "View quote details", "Auto dispatched" or the manual dispatch bar, and the "Bill" pill (section 4.6).
Canceled before a carrier was selected	A grey card "Canceled before a carrier was selected"
Canceled after a carrier was assigned	The usual carrier card, plus (LTL) the orange card "Contact the carrier to cancel the pickup!" (section 4.6)
Dropped carrier with TONU	The active carrier card, plus a half-width card for the replaced carrier with the line "TONU Carrier" and a "Bill" or "Pay bill" pill

Rate confirmation, signing, bill, drop carrier, TONU, driver and tracking pill are in sections 4.3, 4.4 and 4.5.

SHP-059 Non-freight vendors on the detail page

Under the carrier row, each non-freight vendor (Towing, Lumper, Insurance, Warehouse, Chassis, Crane, Customs broker, Steamship line, Transloader) has a half-width card. A small "+ add vendor" control (accessible name "Add another vendor") sits under the cards.

- **"+ add vendor"** opens the "Vendor type" window with the nine rows of SHP-029 and a button "Add vendor". Several types can be added at once; each adds an empty vendor card. A canceled shipment cannot get new vendors.
- **Empty vendor card:** a dashed card with the type icon, type name and "+ add company" in blue (accessible name "Find {Type} vendor"), which opens the find window.
- **Find window:** a read-only "Vendor type" chip; "Vendor name" field (required; "Name is required to add a new vendor"); under it "Or select an existing vendor..." with up to 5 matching vendors of that type (name matches highlighted; empty name lists vendors of the type); a trash button (accessible name "Remove vendor") with the confirmation "Are you sure you want to remove this vendor?", only while the vendor has no cost or price (otherwise the text "To remove this vendor, delete associated line items first." shows); and a blue "Add vendor" button. A new name creates the vendor (once, even if two reps type the same name at the same moment); if it cannot, "Failed to create vendor" shows.
- **Filled vendor card:** type icon, vendor name, type name (prefix "TONU " for a dropped carrier) and a compact "Bill" / "Pay bill" pill. Clicking opens a small window with the vendor name (link to the vendor page) and a red "Remove vendor" button with the same confirmation. It is disabled with "To remove vendor, first remove related charges" while the vendor still has cost or price lines, and refused when it has a bill ("Remove the bill first").
- The charges of a non-freight vendor come from its lines in Cost & Price and become the vendor's bill amount (section 4.5).

SHP-060 Cost & Price strip (Owners and Members)

Under the cards is a white strip that is one big button (accessible name "Expand itemized view") with three figures: **Target cost** (left, bold), **Profit** (center), **Price** (right). The label is "Target cost" while Booked, and "Cost" once Scheduled or later or LTL. Negative profit shows with a leading minus. Hovering Profit shows a box with Margin and Cost + percentages. Customers and carriers do not see this strip; customers see a read-only card "Price" (SHP-076).

Notices under the strip (LTL loads that changed after they were quoted): the orange warning "Pickup date has passed, so the cost could be affected by changes." and "Some things have changed that could affect the cost." (hover lists changed fields) plus a blue pill "Update cost" that opens the edit form. In the first version the edit form does not re-price the LTL quote by itself; the rep adjusts cost and price by hand (section 1.7).

SHP-061 Cost & Price editor

Clicking the strip expands it in place into the card "Cost & Price" (a chevron collapses it; accessible name "Collapse itemized view"). It is the same table as on the form (SHP-043 to SHP-045): one group per vendor, calculators, "+ add item", "Hide from rate con", "Hide from invoice", the Margin / Cost+ / Profit chips with the warnings and the Owner-versus-Member limits (SHP-078). Extra rules here:

- The first row of a group is fixed ("Freight" for the carrier).
- A blue button "Save cost & price" appears when the lines differ from the saved ones. Saving changes only the cost and price lines.
- A checkbox "Send updated Rate con" (default off, tooltip lists the carrier contacts) shows when every freight vendor has a rate confirmation, the lines changed and some rate confirmation was already signed. If ticked, the changed rate confirmation is sent to the carrier in the same save.
- After saving, a pop-up message "Saved Cost & Price" with an "undo" action restores the previous lines. On failure: "Failed to save cost & price".
- Locking cost and price after the shipment is complete is not in the first version (section 1.7).
- Saving after a carrier signed returns the rate confirmation for re-confirmation (section 4.3).

SHP-062 Locations on the detail page

The "Locations" heading is followed by the distance ("1,730 mi"), the transit days ("4 days"), the services chip (for example "Liftgate, Inside"), and a "Reschedule" button that opens the edit page (hidden once the load is picked up). The stop-by-stop part (driver and tracking strip, stop cards with contacts, hours, appointments, references, ETA, In, Out, "Picked up", "Delivered", "Upload POD" / "View POD", tracking updates) is in section 4.4. Stops hidden from the carrier show "Hidden from carrier" for Owners and Members.

SHP-063 Items on the detail page

The heading reads "N items to be shipped" ("1 item to be shipped"), or "Items to be shipped" when the lines have no quantities (vehicles). One card per item shows the title ("4 totes", the description when there is no packaging), a "Stackable" tag, the description in bold, size "48L × 49W × 39H", contents "— 2 drums", and on the right the weight "3,620 lb" and, for LTL, "class 70" and the NMFC. A hazmat item adds a red row with "UN #", "Hazmat class" and "Packing group". An item can be linked from a stop card (the card then gets a blue border).

The right-aligned totals row shows, in order and only when set: "Refrigerated" (temperature range such as 34° - 38°F), "Value", the package count ("Pallets 22"), "Volume" ("106.2 cf"), "Density" ("34.1 pcf"), "Length" ("44' L", or inches for vehicles such as 232" L x 82" W x 79" H) with the "Linear Feet Visualizer" button, and "Weight" ("40,000 lb"). A hazmat shipment adds "Hazmat contact", "Contract #" and "Emergency phone".

Footnotes under the totals:

Text	When
"{Service}: {short explanation}"	Each service with an explanation (for example "Protect from freezing: check with carrier for availability/restrictions")
Pickup, transit and delivery dates are estimated.	Truckload
Pickup dates not guaranteed. Transit times and delivery dates are estimated.	LTL
Carriers limit their liability for damage and loss, usually in the range of $1 – $25/lb.	LTL
Unless otherwise specified, guarantees are for delivery by 5pm.	LTL with a guaranteed quote
The quote was based on the details provided. The final price may be different if the shipment details change.	LTL, customer view
Sort & segregate quoted price is a minimum. Final charge based on shipment and work performed.	Any stop has the sort & segregate service

SHP-064 Map

A map card at the top of the right column draws the route line between the origin (a hollow circle) and the destination (a pin). With live tracking, a green dot marks the latest position. A button expands the map to full width (hidden on narrow screens) and collapses it again. A chip in the top-left corner shows the newest tracking alert for tracked loads (Owners and Members): On-time, At pickup, At stop, Left stop, Behind, Off route, Possible Detention, Low battery, Tracking stopped, Temp too low, Temp too high, Reefer unit off, Temperature alert, Possible fraud, Location off, Phone off, Unable to make it, Past appointment.

SHP-065 Notes

Under the map is a dashed box with the placeholder "+ note".

- Typing a note and leaving the box (or pressing Enter) saves it as a new note and clears the box. Pop-up message "Note saved" with an "undo" action. Empty text is not saved.
- Notes list newest first. Each shows "17 days ago" (hover shows the full date), "(edited)" when changed, and the author's name. Simple formatting is supported (links, bold, lists, tables).
- Hovering a note shows a dark toolbar with "Edit note" (pencil) and "Delete note" (trash). Only the author and Owners can edit or delete. Edit opens the box pre-filled; leaving the box saves. Delete shows "Note deleted" with "undo".
- Notes are internal: customers and carriers do not see them. With no notes, only the dashed box shows.
- Notes do not make the shipment form "stale" (SHP-051).

SHP-066 Timeline

A row "Timeline" with a chevron, closed by default, under the notes (Owners and Members only). Opening it loads the 75 newest events, newest first, on a vertical line. Each row has a small grey line "October 7, 2026 @ 07:46 PM by " and a bold label. The actor is a user's name, an email address for a carrier who signed through a link, or "System" for automatic events. Clicking a row opens the event detail (SHP-067).

Event	Label
Shipment created	Created
Booked	Booked
Carrier assigned	Covered
Carrier dropped	Uncovered
BOL emailed	BOL sent
Fields changed	Updated, or "{field} updated" when one field changed (for example "price updated", "origin date updated", "destination date updated", "stop 2 date updated"). When the customer changed: "Customer updated".
Shipment canceled	Canceled
Shipment uncanceled	Uncanceled
Document added	"{Type} document uploaded" or "{Type} document generated" (for example "POD document uploaded", "Bill document uploaded"), one row per document
Rate confirmation created / sent	"Rate confirmation created" / "Rate confirmation sent" (LTL: "Pickup request sent"; vendor: "Purchase order sent", "Purchase order completed")
Carrier signs	Rate confirmation confirmed (LTL: Pickup request completed)
Rate confirmation changed	Rate confirmation updated
Carrier bill	Bill updated, Bill pushed, Bill payment added
Customer invoice	Invoice updated, Invoice sent, Invoice pushed to accounting
Tracking	Shipment tracking updated, PRO added / updated / removed, Tracking reset, Tracking segment started / stopped / pulled / pushed
Tracking events	"Picked up event added", "Delivered event added", "Info event added", "Arrived event added", "Estimated arrival event added"
Reps	Rep added, Rep updated, Rep removed (Owners only)
LTL quote	Quote request created

SHP-067 Event detail

Clicking a timeline row opens a wide, read-only window.

- Title: the label with the entity word as a link ("Shipment booked"). Meta line: date and time on the left, "by {actor}" on the right.
- Body: a table of changes with columns for the field, old value and new value ("old → new"). Internal fields (ids, creation or update times) are hidden. Locations are named "origin", "destination" or "stop N". With no changes, a short list of key facts (BOL number, carrier name) shows.
- Footer: for "Rate confirmation confirmed" a button "Rate confirmation" downloads the signed rate confirmation.
- The timeline cannot be edited, and the signer's IP address is not shown to users. Reps and commission events are hidden from Members.

Part D. Actions menu and lifecycle

SHP-069 The "..." menu

A white dropdown at the right of the header. Rows have an icon and a label, in this order; a row shows only when its rule is true. Escape or a click outside closes it; arrow keys move through the rows.

Row	Shown when	Result
View quotes	The shipment was booked from an LTL quote	Opens the quote results (section 4.6)
Duplicate quote	Same	Opens a new quote pre-filled (section 4.6)
Duplicate shipment	Truckload shipments (not LTL)	Opens the new shipment form pre-filled (SHP-070)
Change customer	Always for Owners; for Members unless "Enforce credit limits" is on and the customer has a credit limit (SHP-071)	Opens "Change customer" (SHP-071)
Cancel shipment	Shipment is not canceled and not delivered	Opens "Cancel shipment" (SHP-072)
Uncancel shipment	Shipment is canceled	Opens "Uncancel shipment" (SHP-073)

SHP-070 Duplicate shipment

Opens the form described in SHP-053. Available for truckload and Auto Transport shipments in any status, except that a Requested shipment is edited, not duplicated.

SHP-071 Change customer

Moves a Booked, Scheduled, In transit, Delivered or Canceled shipment to another customer. The window has a blue customer icon, the title "Change customer", and the text "Transfer this shipment from {current customer} to the target customer."

Field	Input	Required	Rules and messages
Target customer	Pick list of active customers (no "+ add" option)	Yes	Empty: "Choose a customer". Same as now: "Please select a different customer than the one currently on the shipment". Archived or unknown: "Customer not found".
Target customer contact	Pick list of that customer's contacts	No	The first contact is picked by default and resets when the customer changes. A contact that does not belong to the customer: "Contact not found".
Credit card	Credit usage of the target customer	—	Always shown with the customer's credit state.

A warning block says: "The shipment's assigned reps and pricing will not be updated based on the target customer's settings." The blue button "Change" confirms. On failure the banner "Error changing customer" shows. The page refreshes on success and the timeline shows "Customer updated".

Rules:

- Reps, cost and price stay as they are. The billing address on the shipment is replaced with the new customer's.
- The draft customer invoice moves to the new customer. If the invoice was already sent, the change is refused with "The invoice was already sent".
- A Member cannot change the customer when "Enforce credit limits" is on and the customer has a credit limit (off at go-live; PAY-022).
- Two people changing the same shipment at once are handled one after the other; the second sees the stale message (SHP-051).

SHP-072 Cancel shipment

Opens a window with a red "shipment canceled" icon, the title "Cancel shipment" and the question "Are you sure you want to cancel?". Available for Booked, Scheduled and In transit shipments; a Delivered (or Requested) shipment cannot be canceled.

- When a carrier is assigned (and the rate confirmation was created), a bordered card "Will zero out cost & price" shows "-$1,200.00 to cost" and "-$1,500.00 to price" (the current totals).
- For a truckload with a carrier, two optional currency fields appear: "Do you owe them TONU?" (with "Rate con was sent 2 days ago" when it was sent) and "Charge customer?". The amounts typed become one extra line "Truck ordered not used". A typed 0 is kept as a real zero.
- Buttons: "No, go back" (outlined gray) and "Cancel shipment" (red).

What happens:

- The status becomes Canceled; the time and user are recorded; the previous status is remembered.
- The cost and price of every vendor are zeroed with one negative "Canceled" line per vendor group, so the Cost & Price strip shows $0.00. Existing lines are not deleted. A typed TONU line stays as a normal charge.
- Every carrier and vendor on the load is closed. The carrier's rate confirmation link shows "Shipment no longer available". Tracking is stopped. No email is sent to the carrier; the rep must call the carrier (section 4.3). For LTL the orange card "Contact the carrier to cancel the pickup!" explains what to do, with the carrier's online link, phone and email, and the buttons "Carrier contacted" and "Undo cancel" (section 4.6).
- Reps, invoice references and notes stay on the shipment. The draft customer invoice follows the new (zero or TONU) total (section 4.5). Carrier bills already approved or paid are not touched (section 4.5).
- The shipment leaves the Active list and every queue; in the All list it shows at half brightness.
- a red pop-up message says "Shipment canceled". The timeline records "Canceled".
- A canceled shipment cannot be edited, but notes, documents, the customer invoice and bills can still be worked.

SHP-073 Uncancel shipment

A window with a red warning icon, "Are you sure you want to uncancel this shipment?", and buttons "No, go back" and "Uncancel shipment" (red).

- The status returns to what it was before the cancel (Booked, Scheduled or In transit) and the carriers and vendors reopen.
- The negative "Canceled" lines are removed. A TONU line the rep typed stays (it can be deleted in Cost & Price).
- Tracking stays off; the rep turns it back on if needed (section 4.4).
- Pop-up message "Shipment uncanceled". The timeline records "Uncanceled".

SHP-074 Reps on a shipment

The Reps button opens a window "Reps on BOL 1000123" (about 600 pixels wide).

- At the top, a search field with the placeholder "+ add user". Typing lists account users and teams; names already on the shipment are greyed with a green check. Clicking adds the user or team as a rep, once only ("Already a rep" otherwise).
- Under it (when not searching) a table with the headers "Paid", "User", "Commission", "Payout" and a trash button per row.
  - Owners: set the commission as a percent (0 to 100, one decimal) or a flat dollar fee, see the payout (computed on the shipment's profit), remove a rep, and see at the bottom, right aligned, "Total commissions", "Gross profit" and "Remaining" (gross profit minus commissions).
  - Members: see the names only; Commission and Payout cells are empty. They never see totals, and rep and commission events are hidden from their timeline.
  - The "Paid" switch is read-only here. Marking commissions paid is done in the commissions report (section 4.9). A rep whose commission was paid cannot have it changed or removed until it is un-applied.
- The avatar stack on the page: no reps = a dashed circle with an add-user icon; 1 to 3 reps = overlapping circles with initials; more than 3 = two circles and "+N". The primary rep has a small star.
- When a shipment is booked, the system copies the customer's current reps to it, with each rep's commission setting, and marks the customer's primary rep as the booking rep.

SHP-075 Status lifecycle

Status	Meaning	Enters from	What moves it
Requested	Saved for later by a rep, or a customer's request from the portal; not booked	New	"Save for later", or a customer's request
Booked	The load is sold to the customer; no carrier yet (or LTL not dispatched)	Requested	"Book shipment" by a rep (or a customer booking an LTL quote)
Scheduled	A truckload is covered, even when the rate confirmation is held for carrier approval (LTL: the carrier accepted the pickup request, or staff completed it by hand with "Done")	Booked	Cover the load with a carrier (section 4.3); LTL auto-dispatch or manual dispatch (section 4.6)

Status	Meaning	Enters from	What moves it
In transit	The first stop is picked up	Scheduled	Pickup confirmed by the rep (section 4.4)
Delivered	The last stop is delivered	In transit	Delivery confirmed by the rep (section 4.4)
Canceled	The load will not move	Booked, Scheduled or In transit	"Cancel shipment" (SHP-072)

- A carrier signing the rate confirmation does not change the status: the load becomes Scheduled when covered, even if the rate confirmation is held for carrier approval. A missing signature leaves the load Scheduled with a blue hourglass.
- Dropping a carrier before pickup returns the load to Booked (section 4.3).
- Uncancel returns it to the status it had before (SHP-073).
- A Delivered shipment stays in the Active list until its customer invoice is paid in full.
- A Delivered shipment cannot be canceled. A Requested shipment cannot be canceled.
- Customers see "Scheduled" where Owners and Members see "Booked".

SHP-076 What customers and carriers see

Area	Customer (portal)	Carrier (link)
List and detail	Their own shipments only	The load named in their link only
Header	"BOL" and "Labels" buttons, no pencil, no Reps	Same as customer
Stepper	No Cover or Dispatch segment	Same
Cards	A customer-facing carrier summary (hidden if the account hides carrier names) and the customer card	Same page layout as the customer
Money	A read-only card "Price" with one row per line ("description - note") and "Total"	Not shown; the rate confirmation shows what the carrier is paid
Notes, Timeline, internal notes	Not shown	Not shown
Footer	Footnotes, a link "Customer Terms & Conditions", and a "Questions?" block with the account user's name, company and "Call" and "Email" buttons	Footnotes
Contacts	—	Hidden when the shipment has "Hide contacts from carrier" on

The customer portal and secure links are in section 4.11 (LNK-001 to LNK-003 for link rules).

Who can do what

Action	Owner	Member	Customer	Carrier
See Shipments list and queues	Yes	Yes	Own loads, simple list	No
Book, edit, duplicate, save for later	Yes	Yes (within margin and profit limits)	Request a truckload shipment (section 4.11)	No
Book or update outside margin/profit limits	Yes, with a warning	No	—	—
See cost, profit, margin, carrier on rows	Yes	Yes	No	No
Cost & Price editor	Yes	Yes (within limits)	Read-only "Price"	No
Cancel, uncancel, change customer	Yes	Yes (Change customer: not when "Enforce credit limits" is on)	No	No
Notes and Timeline	Yes	Yes	No	No
See and edit rep commissions	Yes	No	No	No
Add or remove reps	Yes	Yes	No	No
Add non-freight vendors	Yes	Yes	No	No
Export	Yes	Yes	Own loads	No

4.3 Carrier Cover and Rate Confirmation

> **In short:** A rep opens a booked truckload, picks a carrier from leads built from 10-4's own lane history (or adds any carrier by MC or DOT number), enters the cost and the dispatcher's contact, and presses the Cover button. The load moves to "Scheduled" and, for an approved carrier, the carrier is e-mailed a rate confirmation (for a new carrier it is held until an Owner approves the carrier). The carrier opens a secure page, enters driver and truck details, types a signature and confirms, with no login. This part also covers changes after signing, removing a carrier and recording a TONU (truck ordered not used) charge. Reps and Owners use the broker screens; carriers use only the secure rate confirmation page.

Cover drawer (choosing the carrier)

The Cover drawer opens on top of the shipment page from the orange "Cover" card of a booked truckload. The same card appears when a dropped carrier leaves the load without a carrier (COV-028). The "Shipments to cover" queue (section 4.2) lists the loads; clicking a row opens the shipment page, then the rep clicks the "Cover" card.

COV-001 Who can cover and when

Account users (Owners and Members) can cover a load. Customers and carriers never see the Cover card. The drawer opens only if the load is a truckload, not canceled, in status "Booked" and has no carrier assigned. Less-than-truckload loads are booked with a carrier quote (section 4.6).

COV-002 Opening, closing and layout

- The drawer is a dialog on a grey background, labelled "Cover load".
- Close it with the close button (labelled "Close modal") outside the top right corner, with Escape, or by clicking outside. After a successful cover it closes and the shipment page shows the carrier card.
- Top to bottom: title row, lane history bar, then the lead list or the cover form.

COV-003 Title row

Element	What it shows
"Cover load"	Title, large semibold text.
Equipment	The equipment requested for the carrier, or the shipment's equipment (for example "Dry Van").
"Partial allowed"	Small dashed tag, shown only when the load allows a partial truckload.
"Target cost"	Grey label with the sum of the load's carrier cost lines, for example "Target cost $800.00". The amount turns red with a warning icon when the margin is negative.

COV-004 Lane history bar

A blue-outlined bar under the title row summarizes what 10-4 has paid on this lane before. Only 10-4's own covered truckloads are used; no outside rate data is shown in the first version.

- It shows a lane icon with the word "Lane", the small blue label "History" and an amount, for example "History $1,298".
- Lane = the load's first pickup and last delivery, within 100 miles of each end, matching equipment, last 6 months, same direction.
- The History amount is the load's distance multiplied by the average cost per mile of those past loads (total cost divided by total miles); if the load has no distance, the average cost of those loads. No History item is shown when no past load has a cost per mile.
- Clicking the bar opens the lane history details (section 4.9, Lanes). Its accessible name is "View lane history details".

State	Text
Missing locations or equipment	"For lane data add locations & equipment type"
Loading	A spinner
No past loads on this lane	"This is a new lane for you"
The history could not be loaded	"Can't fetch lane data" (red)
Past loads found	The "History" amount

Carrier leads

COV-005 How carrier leads are built

When a truckload is booked, the system builds a list of carrier leads.

- A lead is created for every carrier that hauled a covered truckload (scheduled, in transit or delivered) on this lane within 100 miles of both ends, in the last 6 months, in the same or the reverse direction.
- Each lead records how many times the carrier ran the lane forward and in reverse, when it last did, the average cost per mile, and the dispatcher contact from that carrier's most recent matching load.
- At most 25 leads per load: most lane runs first, then carrier name.
- A failure while building leads never prevents the booking; the rep can add carriers by hand (COV-008) and save a cost on a lead (COV-019).

COV-006 Lead list order

The first rule that differs decides. There are no filters and no paging.

1. Carriers that are approved or candidates before carriers marked "Don't use".
2. Leads with a saved cost ("quoted") before leads without one.
3. Lower cost first.
4. Leads added by hand first.

5. Stronger lane history first: covered forward, quoted forward, covered in reverse, quoted in reverse, none. More runs first.
6. Carrier name A to Z.

COV-007 Lead card

Each lead is a white card; clicking it opens the cover form for that lead.

Element	Text / look	Rule
Status dot	Green, grey or red dot with a tooltip	Green = approved. Grey = "Candidate" (never worked with, not yet approved). Red = "Don't use". The tooltip gives the reason (COV-016).
Carrier name	Large text	
Equipment line	Equipment name	Only when it differs from the load's equipment.
"Partial"	Small grey pill before the equipment	When the lead is for a partial truckload.
"Previously dropped"	Red text with a small icon; card faded until hovered	When this carrier was already dropped from this load (COV-025).
Lane icon	A truck icon	Covered forward, quoted forward, covered in reverse or quoted in reverse. Reverse icons are at half strength.
Cost pill	Blue pill with the cost, for example "$800.00"	With no cost, a dashed grey pill "Add cost".

There is no safety-rating badge; a "conditional" rating appears only as a warning in the compliance box (COV-016).

Empty state. A load with no leads shows a dashed full-width blue button "Add a carrier" with a plus icon. With leads, a white row at the bottom shows a blue link "+ Add a carrier".

COV-008 Add a carrier by MC or DOT number

Clicking "Add a carrier" (or "+ Add a carrier") replaces the list with the cover form and an empty carrier box.

- The box has the placeholder "search by MC or DOT". Empty, it lists the account's approved carriers. After typing (with a short wait after typing stops) it searches the carrier directory (built from public FMCSA data, section 7) by name, MC or DOT number.
- Each result shows the carrier name, "USDOT ", "MC-" and the address. A carrier with no DOT number is shown disabled with "MC/DOT number needed before coverage".
- Picking a carrier that is already a lead on this load opens that lead with its saved data.
- A new carrier stays unsaved until "Save for later" or "Cover".
- Messages: "Carrier with USDOT # required for cover" (no DOT number), "Carrier not found" (unknown DOT number), "Carrier is already a lead on this shipment".
- A back link "Carriers" (arrow left) returns to the lead list when the form was opened from the list.

COV-018 Remove a lead

A saved lead's form shows a trash button (accessible name "Remove lead"). It deletes the lead and returns to the list; the lead can be added again by MC or DOT number. The load and its history are unchanged.

Cover form

Two columns: carrier and contact on the left, cost on the right.

COV-009 Carrier and dispatcher fields

Field	Input / options	Required	Default	Rules & messages
Carrier	Search box, placeholder "search by MC or DOT"	Yes, with a DOT number	Lead's carrier	See COV-008. Disabled when the carrier is blocked.
Contact name	Text, label "Contact name". If the carrier is already on the account, it suggests the carrier's saved contacts ; otherwise plain text. Placeholder "Contact name".	Yes, to cover	From the lead	"Required for cover". Picking a saved contact fills phone and e-mail. Typing a new name clears the saved contact link.
Contact phone	Phone, US by default, label "Contact phone"	No	From the lead	
Contact email	E-mail, label "Contact email", placeholder "email@carrier.com"	Yes, to cover	From the lead	"Required for cover". "Please enter a valid email".
Note for rate con and email	Multi-line, placeholder "optional"	No	Empty	Up to 2,000 characters. Printed as "Note:" on the rate confirmation and carrier page, and shown in the e-mail (RCF-023).
Equipment	Grey button "Equipment: " with a "Partial" tag or "(Not partial)"	Yes	Load's equipment	Opens the equipment window (COV-011).
"Carrier will move as a partial"	Yellow row with a "Partial" check box	No	Off	Only when the load can be a partial truckload.
"Accessorials: "	Grey info row			When the shipment has services.
Compliance and lane box	Read-only text			Shown when the carrier is not approved, when lane history exists, or when the safety rating is "conditional". Shows the approval reason and the lane lines "Covered {n}x in this lane ({time ago})", "Covered {n}x in the reverse lane", "Quoted {n}x in this lane" and "Quoted {n}x in the reverse lane". A "Covered" line is a button that opens the lane history for this carrier (forward or reverse).

A typed contact that does not yet exist for the carrier is created as a carrier contact when the load is covered.

COV-010 Dispatcher contact is required

The Cover button stays greyed out until a carrier with a DOT number, a contact name and a valid contact e-mail are filled in (COV-020).

COV-011 Equipment window

Title "Equipment this carrier will use". It holds an equipment list limited to the load's mode (no "Other"), a line "Requested: ", and, when a partial is possible, the check box "Partial" ("Partial truckload"). The choice changes the equipment printed on the rate confirmation. Equipment cannot be changed on the load after a carrier is covered.

COV-012 Cost editor

A table with columns "Description" and "Amount".

- The first row is always "Freight"; it cannot be deleted or renamed. Its amount box is labelled "Charge 1 cost", with the load's planned cost as placeholder, for example "$800.00".
- Extra rows have a description list (placeholder "Description...", from the charge list: Freight, TONU, Layover, Detention, Additional fee, Lumper) and an amount, and a trash button.
- "+ add charge" adds a row; with more than one row a total row is shown.
- A small calculator next to the amount opens "Cost per mile" with the load's mileage, for example "290 Miles"; hidden when the load has no distance. "Avg $X/mi" shows the lane's average cost per mile when known.
- Covering needs every row to have a description and an amount; "Save for later" does not check this.
- When covered: the first rows overwrite the cost of the matching carrier cost lines (descriptions and prices kept); extra rows become new cost lines with a price of $0; existing lines beyond the entered rows lose their cost and are hidden from the rate confirmation; if the lead has no charges, existing cost lines stay. The rate confirmation total and the carrier bill follow these lines.
- Members are held to the same margin and profit limits as when booking (SHP-078); a broken limit shows as an error on the amount ("Charge N cost"). Owners are not limited.

COV-013 Margin meter

A coloured bar under the cost editor shows the margin the entered cost leaves. It is a guide only and never blocks a cover.

- Profit = price minus cost. Margin percent = profit divided by price (margin on price, not markup).
- The bubble shows margin and profit, for example "50.0% $800.00". The bar ends show the target cost (left) and the price (right).
- The bar runs from green (low cost, high margin) through yellow to red (cost near or above the price).
- With no cost entered the bubble is hidden and the bar is grey. The meter is hidden when the target cost is $0.

COV-014 Tracking switch

A bordered row "Track with Trucker Tools" with a switch, on by default, shown only when a tracking service is connected (section 7). On: tracking starts automatically after the carrier signs (section 4.4). Off: the carrier is not tracked automatically.

COV-015 Packet box

Shown only for a candidate (not yet approved) carrier: a cream card with a document icon and a switch.

State	Title	Text
No packet requested yet	"Needs a packet"	"Request a carrier packet. Once packet is received and approved, we'll send the rate con."
Packet requested, not returned	"Waiting for packet"	
Packet returned, not approved	"Need to approve"	

- The switch "Request packet" defaults to the account setting "Request carrier packets" (Settings > Carriers > Terms & Conditions, section 4.10). It is off and disabled when a packet is already requested or returned.

Approval rules

COV-016 Carrier approval states

Every carrier has one status on the account; it decides whether the rate confirmation can be sent (approval itself: CAR-007, CAR-015).

Status	Meaning
Approved	The rate confirmation can be sent at once.
Candidate	New or unapproved. A packet can be requested. The rate confirmation is held.
Rejected ("Don't use")	The carrier is blocked.
Reasons shown in the status dot tooltip and the compliance box:	

- "Not in-service".
- "Not authorized".
- "No carrier, broker, or freight forwarder authority".
- "Safety rating unsatisfactory".
- "Insurance expired" (the manual status stays, but the reason is shown).
- "Don't use this carrier" (the account marked it so).
- "Manually approved" and "Manually added as candidate" (status set by hand).

- "Haven't worked with this carrier before" (new on the account: candidate).
- "Add carrier to your account first" and "Unknown carrier" (not yet on the account: candidate).

A conditional safety rating shows a warning in the compliance box. Approval is re-checked at the moment of covering and of sending, so an old screen cannot send to a carrier that became blocked.

COV-017 Owner override

- A blocked ("Rejected") carrier shows a red card. For an Owner: the title "Carrier not authorized" and a switch "Override coverage status", explaining that the carrier is blocked to protect the brokerage and that an override sends the rate confirmation at once, skipping the packet request. With the override on, the Cover button reads "Cover & send rate con".
- A Member sees a red notice "Don't use this carrier" with the reason; a Member's attempt to override is refused: "Only an Owner can override coverage status."
- Without the override, a rejected carrier cannot be covered: "Carrier not authorized".
- Only an Owner can override, and only for a blocked carrier. A new (candidate) carrier has no override: an Owner approves it and the held rate confirmation is released (COV-023).

COV-019 Save for later

The grey outlined button "Save for later" saves the lead (carrier, contact, note, equipment, costs, switches) without covering and without validation. A lead with a saved cost is "quoted" and moves up the list (COV-006). It does not change the load and is not added to the timeline.

COV-020 Cover button

A blue button at the bottom of the form.

Situation	Label
Approved carrier	"Cover & send rate con"
Candidate carrier, "Request packet" on	"Cover & request packet"
Candidate carrier, "Request packet" off	"Cover"
Rejected carrier with Owner override on	"Cover & send rate con"

- Greyed out until the carrier has a DOT number, a contact name and e-mail, the form is valid, and every charge row has a description and amount. Disabled while a rejected carrier has no override.
- Error banners: "Error saving carrier lead" and "Error covering" followed by the reason.
- Covering-step messages: "Carrier already selected" (another carrier was covered meanwhile), "Shipment is not waiting for a carrier", "Shipment is canceled", "Not allowed" (not a truckload).

What happens when you cover

COV-021 Cover is one step

Pressing Cover saves the lead and covers in a single operation: everything happens or nothing does.

1. The carrier is added to the account if new.
2. The dispatcher contact is saved to the carrier if new.
3. The cost lines and rate confirmation charges are set (COV-012).
4. A rate confirmation is created in the draft state, with the current Rate con terms and carrier agreement saved onto it, so later setting changes never alter an existing rate confirmation.
5. A carrier bill is created in the "Pending" state with the expected amount (section 4.5).
6. The load moves from "Booked" to "Scheduled" (SHP-075), even if the rate confirmation is held for approval; it does not wait for the signature. A load without a signature stays "Scheduled" with an hourglass.
7. The timeline shows "Covered" and the rate confirmation event (section 4.2).
8. The rate confirmation (COV-022) or the packet request (COV-023) is sent.

After covering, the shipment page shows the carrier card. The rate confirmation pill shows an hourglass with "Shared with , waiting on confirmation". The driver strip and the tracking pill show "Awaiting rate con".

COV-022 Rate confirmation e-mail

For an approved carrier, or an Owner override, the rate confirmation goes out in the same step, to the dispatcher's e-mail. Contents are in EML-020. The PDF "Carrier-Rate-Con-.pdf" (section 6) is attached.

- If sending fails, the cover still stands and the rep can send it from the rate confirmation page (RCF-004). The message is "Failure occurred while sharing rate con. Covered successfully but rate con needs to be shared."
- Reply-to is the account's rate confirmation reply-to address (Settings > Carriers > Rate cons), otherwise the rep who covered.
- The secure link follows LNK-001 to LNK-003. The share is recorded as a sharing row (RCF-005).

COV-023 Candidate carrier, packet request and held rate confirmation

- With "Request packet" on, the carrier is covered and receives the carrier packet request e-mail (EML-050, section 4.8). With it off, nothing is e-mailed. In both cases no rate confirmation is sent.
- The rate confirmation stays in the draft state and is held. Its page says "Rate con will be sent when you approve this carrier"; the Share button is disabled; the TL carrier card on the shipment page shows an orange "Rate con will be sent when you approve this carrier" with an orange "Review carrier" button that opens the carrier profile.
- When an Owner approves the carrier, the system sends every held rate confirmation of that carrier to the saved dispatcher contact. If a held rate confirmation has no contact with an e-mail, the hold is lifted and the rep sends it by hand.
- If the carrier is blocked again before sending, sending is refused with "Carrier not authorized" or "Rate con will be sent when you approve this carrier".

COV-024 Cover messages summary

Message	When
"Required for cover"	Contact name or e-mail missing
"Carrier with USDOT # required for cover"	Carrier without a DOT number
"Carrier is already a lead on this shipment"	Duplicate carrier on a load
"Only an Owner can override coverage status."	Member turns the override on
"Carrier not authorized"	Rejected carrier without override
"Carrier already selected"	The load already has a carrier
"Shipment is not waiting for a carrier"	Load is not "Booked"
"Contact needs an email"	Sending a rate confirmation to a contact without an e-mail
"Rate con already sent"	Sending a rate confirmation twice

Removing or replacing a carrier, and TONU

COV-025 "Previously dropped" in the lead list

A carrier dropped from this load before shows red "Previously dropped" on its lead card, faded until hovered. It can still be chosen and the list order is unchanged.

COV-026 Carrier drawer and "Remove carrier"

On a covered load, clicking the carrier card opens the carrier detail drawer (the carrier's profile in a dialog, section 4.8). At the bottom, a red outlined button "Remove carrier" with a trash icon opens the "Drop carrier" window.

- Enabled while the load is "Scheduled". Disabled once the carrier's part is in transit or delivered (tooltip "Carrier already in transit or delivered.") and on a canceled load.
- Any account user may remove a carrier, not only Owners.

COV-027 "Drop carrier" window

A window with a red warning icon, the title "Drop carrier" and "Are you sure you want to drop from this shipment?"

Field	Input	Required	Rules
"Do you owe them TONU?"	Money, placeholder "$0.00"	No	Cost owed to the dropped carrier. A hint says "Rate con was sent " when a rate confirmation was sent.
"Charge customer?"	Money, placeholder "$0.00"	No	Price charged to the customer for the TONU.

- The two fields show only when the load is not in transit, delivered or a draft.
- Buttons: "No, go back" (grey outlined) and "Drop carrier" (red, spinner while working).
- Success: the window and drawer close, the shipment page opens and "Carrier dropped" appears. Failure: a red banner "Error dropping carrier" and the window stays open.
- Other refusals: "No carrier is assigned to this load" (no carrier or load not "Scheduled"), "Remove the payments first." (the carrier bill has payments), "Shipment is canceled", "Not allowed" (not a truckload).

COV-028 Drop with no TONU amount

If both fields are empty or $0, the carrier is simply released.

- The rate confirmation and carrier bill are canceled ("Aborted"); signed copies are marked canceled.
- The load goes back to "Booked", keeping its cost lines, stops and leads. The Cover card appears again. No TONU card or new bill is created.

COV-029 Drop with a TONU amount

If the cost or the price (or both) is above $0, the drop also records the TONU.

- The carrier is released as in COV-028.
- A separate "TONU Carrier" card stays on the shipment page for the dropped carrier: half width, red hidden-carrier icon, its own carrier bill with a "Pay bill" button.
- A cost line "Truck ordered not used" is added for the dropped carrier with the entered cost and price; the carrier bill holds only that cost. The customer price is added to the customer invoice as a "Truck ordered not used" line. Load totals are updated.
- Cost and price are independent: a TONU can be charged to the customer without paying the carrier, and the reverse.
- After the drop, the TONU amounts are read-only on the Cost & Price block.
- The standard TONU amount of $150 comes from 10-4's Terms & Fees text (RCF-023); the rep decides the actual amount.

COV-030 Effects of a drop

- Tracking of the dropped carrier stops (section 4.4). The dropped carrier gets no e-mail.
- The old rate confirmation link says "Shipment no longer available." and offers "Download canceled confirmation" when a signed copy exists (RCF-020). Signing is refused with the same message.
- The dropped carrier is not counted as "the carrier" of the load in lists, exports, lane history and the customer statement. Search still finds it.
- A drop is added to the timeline (section 4.2).
- If the bill has uploaded, approved or pushed status but no payments, the bill is canceled. A bill already pushed to the accounting system must be voided in QuickBooks by hand.

COV-031 Covering a replacement

The rep covers the new carrier as above; the rate confirmation, bill and tracking are created fresh. A load can be dropped and re-covered several times. Each TONU drop adds a "TONU Carrier" card and its bill; the TONU

bill and the delivering carrier's bill go through carrier billing separately (section 4.5). The customer gets one invoice including any TONU price.

Rate confirmation page (broker)

RCF-001 Opening the page

The page "Rate Confirmation" shows one carrier's rate confirmation for a load. It opens from the "Rate con" pill on the truckload carrier card (disabled while the rate confirmation is held), from the "Rate Confirmation" tile on the Documents page (section 6) and from the "Rate confirmation" button on a timeline event. It is a dark full-screen page for account users only. Close with the X (accessible name "Close document"); the link "Documents" goes to the Documents page.

RCF-002 Header

Left: the title "Rate Confirmation", the carrier name and a small grey "Carrier" label. Right: "BOL " (link to the shipment), the customer name (link) and "<pickup city, ST> → <delivery city, ST>".

RCF-003 Status text

A status card shows one text (first match wins).

Condition	Text	Look
Carrier confirmed	"Confirmed by "	Green, check mark
Changed after signing, not yet re-sent	"Send updated Rate Confirmation"	Orange warning
Held for an unapproved carrier	"Rate con will be sent when you approve this carrier"	Orange
Sent and waiting	"Shared with [and N more], last , waiting on confirmation"	Blue, spinning hourglass
Never sent	"Rate Con not shared"	Grey, closed eye

RCF-004 Share button

A green "Share" button, disabled while the rate confirmation is held. It opens the share window (RCF-005).

RCF-005 Share window ("Sharing Carrier Rate Confirmation")

View	Content
Overview	Title "Sharing Carrier Rate Confirmation". Empty text "Not yet shared". One row per contact with an icon (orange refresh = a send is still needed, green check = confirmed, blue hourglass = waiting), the contact name or e-mail, the time of the last send, and a trash button. After an e-mail failure or when a re-send is needed, an orange outlined "Resend" button. Link "+ add share".

View	Content
Choose a contact, first send	Title "Select contact to share with" (one choice). Search box "search or type in new email". The carrier's contacts as "Name (email)" with the small text "Carrier contact". A typed valid e-mail offers "+ add " (creates a carrier contact). Note: "After RateCon is initially sent, you will be able to share with additional contacts." Blue "Share" button, disabled with no choice.
Choose contacts, later sends	Title "Select contacts to share with" (several choices). Same list.
Stop sharing	Title "Stop sharing this document with ?" Text: "Access to this document will be removed but they may have already received previous versions of this document." Buttons "No, cancel" and red "Yes, remove".

- The first send is the real send of the rate confirmation; later shares e-mail extra contacts. Re-sending to the same contact is "Resend". Sending again to the same contact reuses that contact's link and renews its 42 days (LNK-001).
- A rate confirmation changed after signing and not re-sent shows the contact with "Resend", which sends the updated rate confirmation.
- Messages: "Error sharing", "Failed to remove share", "Contact needs an email".

RCF-010 Document viewer and Regenerate

The page shows the rate confirmation PDF as page images; clicking a page zooms it. The footer shows the file name "Carrier-Rate-Con-.pdf", a download button and a refresh button (accessible name "Regenerate document") that rebuilds the PDF from current data. The PDF is also rebuilt in the background after edits; a page view never changes data (contents: section 6). A missing file shows "Not available" with the regenerate button. If the preview cannot be shown: "Preview not available" with "Try again", or "Click to download" when the file can be downloaded.

RCF-006 Cost & Price block

Account users see a collapsed strip: "Target cost $X", "Profit $Y", "Price $Z". The expand button is "Expand itemized view" (collapse: "Collapse itemized view"). Hovering Profit shows "Margin n%" and "Cost+ n%".

- Expanded, it lists this carrier's line items: Description, Cost, Price. Each line has a trash button and two switches, "Hide from rate con" and "Hide from invoice". "+ add item" adds a line. A line with no cost at all is also left off the rate confirmation.
- Other carriers' lines are not shown but kept unchanged when saving.
- The blue button "Save cost & price" appears only after a change.

RCF-007 Saving and undo

Saving updates the load's line items. Messages: "Saved Cost & Price" with an "undo" action that restores the previous lines, and "Failed to save cost & price". The PDF changes after the rate confirmation is re-sent or regenerated. Saving also checks the signed rate confirmation (RCF-018).

RCF-008 "Send updated Rate con" switch

A switch "Send updated Rate con" appears when the rate confirmation is confirmed, there are unsaved changes, the load is a truckload, the contact has an e-mail and the carrier is not held. Hovering shows "Rate con" and "To carrier contact(s)" with names and e-mails.

- **Off by default**: a routine edit never e-mails the carrier unless the rep turns it on. When on, saving also re-sends the rate confirmation.
- The same switch appears in the shipment's Cost & Price editor and the shipment edit form.

RCF-009 "Download previous version"

Shown when the rate confirmation is waiting for the carrier to accept changes. It downloads the last version the carrier signed.

Carrier confirmation page (carrier, secure link)

RCF-011 Secure link and security

The carrier opens the link from the e-mail; no account or login is needed (link life and renewal: LNK-001 to LNK-003).

- The page title is "Shipment BOL #"; it is hidden from search engines.
- The link works only for that carrier contact and rate confirmation. Expired, removed or altered links show "Shipment not found" with "Shipment does not exist or is not publicly shared."
- It gives access to this one rate confirmation only. The carrier sees only: carrier name, MC number, the stops, items, services, charges and rate confirmation text; never the customer, customer price, margin, internal notes or other loads.
- Loading state: a spinner with "Loading shipment".

RCF-012 Carrier page layout

White page, no menu. Top to bottom:

1. **Branding bar:** broker logo left, broker name right.
2. **Banners:** per state (RCF-016, RCF-019, RCF-020).
3. **Carrier and load card:** equipment icon, carrier name (large), "MC-" (or "MX-" for Mexican carriers) and city and state; right: equipment text (a refrigerated load also shows the temperature range). A grey card shows the pickup date (for example "Fri, Oct 2"), "<origin city, ST> → <destination city, ST>" with a small count when there are more than 2 stops, "BOL ", distance with units and total weight " lb".
4. **Terms & Fees:** optional "Note:", the heading "Terms & Fees", the bullet "Exclusive use only" (or "Partial use"), then 10-4's rate confirmation terms in two columns (RCF-023).
5. **Confirm form** (RCF-013), only while the rate confirmation needs confirming.
6. **"Locations":** a "Services:" chip row and the stops in order: stop type, number, company, address, date and time window, appointment, PO numbers. Stop hours and private notes are not shown.
7. **Items card:** " items to be shipped" with total weight, then one row per handling unit: quantity and package type, description, dimensions "LxWxH", weight, a "Stackable" tag, commodity, hazmat details (UN number,

hazmat class, packing group), LTL class and NMFC. Then a hazmat contact block ("Hazmat contact", "Contract #", "Emergency #"), the total dimensions line and the accessorial list.

8. **"Questions?" block:** the rep who covered the load (photo, name), broker name and address, a phone button and an "Email" button. Phone and reply-to e-mail come from Settings > Carriers > Rate cons, otherwise the rep's own.

RCF-013 Confirm form

Two columns on a wide screen (stacked on a phone, form first).

Field	Input	Required	Rules & messages
"Driver's name"	Text, placeholder "Joe Driver"	Yes	"Required"
"Driver's phone"	Phone, US by default	Yes	"Required", "Enter a valid phone number". Saved in the standard phone format.
"Tractor #"	Text, placeholder "optional"	No	
"Trailer #"	Text, placeholder "optional"	No	
Acknowledgment text	Fixed paragraph		"I acknowledge as correct, and accept the referenced shipment on behalf of . I agree that the charges indicated above include all costs and fees in connection with the shipment as described. Invoicing by and payment by constitutes acceptance of this agreement. By signing, this creates a contract carriage shipment."
"Signature (first & last name)"	Text in a script font	Yes	After trimming and collapsing spaces, at least two words of two or more letters each; letters, periods, apostrophes, hyphens and spaces only. "Please enter a valid first and last name." blocks the submit. Kept as typed.
"I agree" check box	"I have read and agree to the Carrier Terms & Conditions" (link opens the carrier agreement in a new tab)	Yes, when shown	Shown only when the account setting "Require carriers to agree to terms" is on and the rate confirmation has a carrier agreement. "Required" if unchecked.
"Confirm shipment"	Blue button		Loading state while saving.

- Right column: the charge summary. Charges are listed as "description ... $amount" when there is more than the single "Freight" charge. The total is large and bold, with a line above it when there are several charges.
- No QuickPay option and no legal line under the form in the first version.
- A failed save shows a red box "Error accepting load" with the reason; field errors show under their fields.

RCF-014 What confirming does

Confirming is checked and recorded by the system.

- The rate confirmation moves from waiting to confirmed; the time and the typed signature are saved. The signed version keeps the exact PDF content signed (section 6); later edits never appear under an old signature.
- The timeline shows "Rate confirmation confirmed" (section 4.2); the event has a blue outlined "Rate confirmation" button that opens the signed PDF ("Preview not available" if not ready).
- The shipment status stays "Scheduled".
- When a carrier agreement applies and the carrier agreed, the carrier is e-mailed the signed copy (RCF-021).
- Tracking starts after the signature when the tracking switch is on (section 4.4).
- The broker sees the green check on the "Rate con" pill and the driver strip with driver name, phone, truck and trailer.
- The load stays confirmed even if the carrier closes the page.
- Refusals: "Shipment no longer available." (load canceled or carrier dropped), "Rate confirmation already confirmed" (second signing), "Rate confirmation is not ready" (changed and not re-sent).

RCF-015 The carrier signs only what they saw

The page remembers the charges, stops, equipment and pickup number it showed. If the load changed after the page opened, confirming is refused with "This load was updated. Please review the new details." The page reloads with the new details, keeping what the carrier typed.

RCF-016 Confirmed view

After confirming (or opening a confirmed link):

- A green panel "Load accepted" with a green outlined button "Download confirmation" (spinner until the signed PDF is ready; "Preview not available" if the file is missing). Right after signing, when a carrier agreement applies, it adds "Thanks, we'll send you a followup email with the signed agreement."
- The Terms & Fees block, a dashed line, then "Driver:", "Phone:", "Tractor #:", "Trailer #:" and "Signed by:" (signature in script font). Charges on the right.
- Footer: "Accepted by ()" and, when agreed, "Agreed to the Carrier Terms & Conditions" (link, new tab).
- Locations, Items and Questions? stay visible.

RCF-017 Broker side of a confirmed rate confirmation

The status text becomes "Confirmed by ". The carrier card shows a green check on the "Rate con" pill and the driver strip. The rep can still edit driver details in the "Driver & tracking" window (section 4.4); this never asks the carrier to confirm again.

RCF-018 Edits after signing and re-confirmation

A signed rate confirmation is invalidated only when something the carrier accepted changes:

- Any charge, or the total.

- Any stop's date, time window, appointment or address, and adding or removing a stop.
- The equipment.
- The partial or exclusive use flag.
- The pickup number.

Not counted: driver details, tractor and trailer, the note, internal notes, canceling or restoring the load, and Terms & Fees and the carrier agreement (they stay as at cover).

- On such a change the rate confirmation moves from confirmed back to draft and the status text becomes "Send updated Rate Confirmation".
- The system keeps a list of changes, such as "Rate $800.00 → $900.00", "Added $x", "Removed $x", " $x → $y", "Location 1 day", "Location 1 time", "Location 1 address", "Location added", "Location removed", "Equipment → ", "Partial use" or "Exclusive use only", "Pickup # changed".
- The rep re-sends from the Share window ("Resend"), the "Send updated Rate con" switch, or the shipment edit form's "Send updated documents" card. The carrier gets the e-mail again and the rate confirmation waits for acceptance of the changes.
- Until re-sent, a carrier opening the old link sees "Oops, this is an old version" (RCF-020).
- The signed copy of the earlier version stays downloadable as "Download previous version".

RCF-019 "Something's changed" (re-confirm)

Shown to the carrier when the rate confirmation was re-sent after a change.

- An orange-outlined box titled "Something's changed" with the numbered list of changes, and an orange button "Confirm changes".
- The previous signature, driver and truck details are reused (the carrier does not retype them); the agreement is re-confirmed when it applies.
- The signature in the confirmed block is hidden until the changes are confirmed.
- The broker's status text is "Shared with , waiting on confirmation".

RCF-020 Other carrier page states

State	When	What the carrier sees
Loading	Page is loading	Spinner and "Loading shipment"
Not found	Link bad, expired or removed	"Shipment not found" / "Shipment does not exist or is not publicly shared." (no action)
Needs confirmation	Rate confirmation sent, not signed	Terms & Fees and the confirm form
Confirmed	Already signed	"Load accepted" view (RCF-016)
Something's changed	Re-sent after a change	RCF-019
Old version	Changed and not re-sent, or replaced	A document-missing icon, "Oops, this is an old version", "You previously accepted BOL #, but there have been changes. Please see your email for links to the latest version." and "Download previous confirmation"

State	When	What the carrier sees
No longer available	Carrier dropped or load canceled	An orange panel "Shipment no longer available." and "Download canceled confirmation" when a signed copy exists
Held	Carrier not approved yet	No rate confirmation is received until approval (COV-023)

RCF-021 Follow-up e-mail with the signed copy

Sent only when a carrier agreement applies and the carrier agreed to it; contents in EML-022 (subject "Signed rate confirmation ", text "Thanks for confirming load . The signed rate confirmation is attached.", a "View rate confirmation" link, the signed PDF "Carrier-Rate-Con-.pdf" with the signature in a script font). Reply-to is the account's rate confirmation reply-to, otherwise the rep who covered. A signed copy is built and kept even when no agreement applies; only the e-mail is skipped.

RCF-022 Carrier agreement page

A public page (no login) showing 10-4's carrier terms and conditions. The link is shown on the confirm form and in the PDF. The page tab title is "Carrier Terms and Conditions".

- Text terms are shown as a document; terms kept as a link open the linked PDF. A spinner shows while loading. If the terms cannot be found: "Unable to find carrier terms." with no action.
- The terms belong to Settings > Carriers > Terms & Conditions (section 4.10): "Require carriers to agree to terms" decides whether the check box shows; "Request carrier packets" sets the default of the packet request. With no carrier agreement, the check box and link are left out.
- The agreement saved on a rate confirmation at cover is the one the carrier sees, even if the setting changes later.
- Old Quote Factory carrier-terms links do not work in 10-4 TMS; they show "Unable to find carrier terms." New rate confirmations carry the new link.

RCF-023 Terms & Fees text

- Terms & Fees is the account's "Rate con terms" setting (Settings > Carriers > Rate cons, section 4.10). 10-4's current text is carried over unchanged: paperwork requirements, accessorial schedule (layover, TONU, detention, extra stop-off), performance-based deductions, delivery and operational compliance. Changing it is an Owner setting change.
- The version in force at cover is saved onto the rate confirmation; later changes apply only to new rate confirmations.
- The rate confirmation always starts with "Exclusive use only" (or "Partial use" for a partial load) once, even if the saved terms start with that bullet.
- The optional "Note:" line comes from the "Note for rate con and email" cover field.
- On the PDF the terms print on page 2 in two columns (DOC-010); on the carrier page they show in two columns on a wide screen.

RCF-024 Carrier never signs

The load stays "Scheduled" with an hourglass. The rep resends from the Share window, or phones the carrier. There is no control to record a phone confirmation in the first version.

RCF-025 Rate confirmation lifecycle (rate confirmation states)

State	Meaning
Draft	Created at cover, not sent (or changed after signing, not re-sent, or held)
Waiting	Sent, waiting on the carrier ("accept terms", or "accept changes" after a change)
Confirmed	Carrier signed
Old version	Replaced by a newer version
Canceled	The carrier was dropped, or the load canceled

Who can do what

Action	Owner	Member	Carrier
See the Cover card, cover with an approved or candidate carrier	Yes	Yes	No
Add, save and remove carrier leads	Yes	Yes	No
Override a "Don't use" or unauthorized carrier	Yes	No ("Only an Owner can override coverage status.")	No
Approve a carrier (release a held rate confirmation)	Yes	No	No
Edit cost lines at cover	Yes, no limits	Yes, within margin and profit limits	No
Share, resend, regenerate rate confirmation	Yes	Yes	No
Edit Cost & Price on the rate confirmation page	Yes	Yes, within limits	No
Remove a carrier, record TONU	Yes	Yes	No
Open the rate confirmation secure page and confirm	No	No	Yes (with the link)
Open the public carrier agreement page	Anyone with the link	Anyone with the link	Anyone with the link

Customers never see the Cover card or any rate confirmation page.

4.4 Tracking, Pickup and Delivery

> **In short:** This part of the system covers everything that happens to a load after a carrier is assigned: the stops on the shipment page, recording check-ins, confirming "Picked up" and "Delivered", live tracking of the truck through Trucker Tools, and the proof of delivery (POD). It also includes the two work queues, "Confirm pickups" and "Confirm deliveries". Brokers (Owner and Member) use it every day. Customers see the result on their shipment page.

Locations section on the shipment page

The "Locations" section sits on the shipment page (section 4.2). It shows one card per stop, joined by a vertical line. For truckload (TL) loads with a carrier, a driver strip sits above the stops.

TRK-001 Section header

Item	When it shows	What it does
"Locations" heading	Always	-
Distance, for example "1,730 mi"	Distance is known	Display only
Transit days, for example "4 days" ("1 day" for one)	Transit days are known	Display only
Reschedule button	Broker users only, while the load has not been picked up	Opens the "Edit shipment" page (section 4.2); no separate pop-up.
Services chip, for example "Liftgate, Inside"	The shipment has services	Display only
PRO and **Track** (LTL loads only)	See TRK-090 and TRK-091	

TRK-002 Stop card: left side

Element	Rules
Stop number in a circle	"1", "2", and so on. Filled green with a white number once the stop is completed; otherwise a grey outline.
Company name	Bold. Next to it, in small grey text, the location type (for example "Business with dock/forklift", "Residential").
Trade show line	On a stop with the location type "Convention/trade show": " - Booth ".
Address	Street, then "city, state ZIP".
Contact	Contact name in bold with phone number. Hidden from carrier users when the shipment says "Hidden from carrier".

Element	Rules
Phone button	Click to copy the phone number. Tooltip "Click to copy phone". A short confirmation appears for 1.5 seconds.
E-mail buttons	One per contact e-mail. Click to copy. Tooltip "Click to copy email".
Resend BOL icon	Broker users only. Shows when the BOL was already sent to this stop's first e-mail address (and is not still sending). Tooltip "Resend BOL". Sends the BOL again (EML-011). Messages "BOL shared" / "Failed to send BOL".
"Hidden from carrier" line	Broker users, when the shipment hides contacts from carriers. Small grey text with a closed-eye icon.
Service pills	Services for this stop (for example liftgate).
"PICK UP" and "DELIVER" rows	Only on loads with more than two stops. "PICK UP" lists the items picked up at this stop, "DELIVER" the items dropped there. Clicking an item scrolls to its card in the items list (SHP-063).
NOTE box	Yellow box labeled "NOTE" with the stop's instructions. Turns transparent once the stop is completed.
PRIVATE NOTE	Label "PRIVATE NOTE" and the private note. Broker users only.

TRK-003 Stop card: right side (dates and times)

Element	Rules
Date	Format "Fri, Dec 25". The year appears in small grey text when not the current year. Shown, in priority order: the actual pickup or delivery date, the planned stop date, then the estimated delivery date. Bold black once the stop is done.
"~" prefix	On the destination of an LTL load that is not yet delivered, for example "~ Thu, Oct 15" (an estimate).
Late warning icon	An orange triangle before the date when the load is "Scheduled" and the stop date is before today. Tooltip: bold "This should have been picked up by now." then "Check to see if it's in transit or needs to be rescheduled."
Completed time	Time such as "2:48pm" in the stop's own time zone, followed by the zone in grey (for example "EDT").
Lateness text (TL only)	Small grey text under the completed time when the actual time is outside the appointment or open window, for example "2h 9m late".
Appointment	See TRK-010.
Open window	Grey text "Open 8:00am – 5:00pm EST". Only while the stop is not completed, has open and close times, and has no appointment.
References	Right-aligned rows such as "PO 12345", "Pickup …", "Order …". Kind in grey, value in black. Hidden from carrier users until they accept the rate confirmation.
"PICKUP" number	On the pickup stop, when a pickup number exists: "PICKUP " in small grey capitals. Broker users see it once the load is picked up; other users always.

TRK-004 Stop card appearance

- Card border: dashed grey while the stop is not completed; solid grey once the truck has arrived; dashed orange when the load is "Scheduled" and the stop date is before today.
- The vertical line between stops is grey and turns green after a completed stop.
- Hovering a completed card shows a green ring.
- On a phone, stop cards stack in one column.

TRK-005 Stop order and the order rule

Stops are shown in route order. A stop can be picked up, delivered or marked arrived only after the stop before it is completed (TRK-025).

Appointments

TRK-010 Add an appointment

Broker users can set an appointment on any stop, in any shipment status, including canceled loads. With no appointment and the stop not completed, a ghost button "+ Add appointment" appears. With an appointment, the card shows two lines: "Appt" with the time in bold, and the appointment number (or grey italic "unknown"). A completed stop shows one line: "Appt @". Customers and carriers see plain text. Clicking the button or the appointment opens the "Appointment" window.

Field	Input / options	Required	Default	Rules and messages
Appointment time	Time picker, label "Appointment time"	Yes	The saved appointment time	Hours and minutes.
Appointment # or ID	Text, label "Appointment # or ID", example text "12345"	No	The saved number	Up to 50 characters.
Send updated Rate con	Check box	-	Off	Only when a signed rate confirmation exists with a carrier contact and the carrier is approved. Hovering lists the carrier contacts who would be e-mailed.
Cancel appt	Red outlined button	-	-	Only when an appointment exists. Removes it. "Appointment removed"; on failure "Failed to remove appointment".
Save	Blue button, "Saving..." while working	-	-	"Appointment saved"; on failure "Failed to save appointment".

TRK-011 Appointments and the rate confirmation

The appointment is a term of the signed rate confirmation.

- If the carrier has already signed, saving a new or changed appointment returns the rate confirmation to "draft" so the carrier must confirm again (section 4.3).

- The carrier is e-mailed the updated rate confirmation only when "Send updated Rate con" is on.
- An appointment change also updates the load at Trucker Tools (TRK-059).

Recording events on a stop

Under the stop card is an action row, shown to broker users only.

TRK-012 ETA, In and Out buttons (truckload loads)

LTL loads show no ETA, In or Out.

Button	Shows when	What it does
ETA (blue text) shows "ETA" or "ETA 4:30pm"; on another day also the date, for example "ETA Fri, Dec 25 4:30pm".	TL loads, stop not reached and not completed.	Opens the tracking window in ETA mode, titled "ETA to ".
In shows "In" or "In 4:30pm". A pulsing blue dot shows while the truck is on site.	TL loads, the stop is the first one or the stop before is completed, and the carrier does not still need approval.	Opens "Arrived at ". Submit button "Mark arrived".
Out shows "Out" (grey, faded until the truck is in) or "Out 4:30pm" after completion.	TL loads	Opens the window for the stop's completion (Picked up, Delivered, or "Location complete"). When a stop is both pickup and delivery the Out time is read-only with the tooltip "To modify, edit the PICK event below."
Dwell text (grey)	The truck has arrived	Time on site. Counts up every minute while on site; shows the total after completion.

TRK-013 The tracking window

All events use one window; the title depends on the mode.

Mode	Title	Submit button
ETA	"ETA to "	"Save"
Arrived	"Arrived at "	"Mark arrived"
Picked up	"Shipment picked up"	"Picked up"
Delivered	"Shipment delivered"	"Delivered"
Stop is both pickup and delivery	"Location complete"	"Complete"
Free update	"Tracking update"	"Save"

Field	Input / options	Required	Default	Rules and messages
Time (labeled "ETA" in ETA mode), with the time-zone name in grey	Time picker	Yes	Now, or the stop's open time, or the saved event time	For Picked up, Delivered and Arrived the time cannot be in the future: "Time is in the future ()". One-minute tolerance.
on (date)	Date picker, calendar opens from the date text	Yes	Today	For Picked up, Delivered and Arrived the latest date is today. The earliest date is the earlier of the booking date and the first pickup date; earlier shows "Date is too early".
Location	Place search (type a city or place)	Required for "Tracking update" when there is no note	Empty	In other modes a small button under the title shows the stop's "City, ST" with a pencil; click to change the event location.
Appt / ETA / Open lines	Read-only grey text	-	-	"Appt 2:00pm ", "ETA 4:30pm Fri, Dec 25", "Open 8:00am – 5:00pm" when available.
Notes	Text area, example text "optional" when a location exists	Required for "Tracking update" when there is no location	Empty	Up to 1,000 characters. Both empty: "Enter a location or a note".
PRO #	Text, example text "optional"	No	Empty	Only when the shipment has no PRO number and the mode is not ETA. Up to 50 characters.
Picked up early?	Yellow warning box	-	-	For a pickup earlier than planned: "Picked up early?" and "This pickup was scheduled for ." Does not block saving.
Delete	Red outlined button	-	-	Only when editing an event you created.

TRK-014 Picked up

The blue **Picked up** button shows on a pickup stop when it is the next expected event, the stop is the first or the stop before is completed, and the carrier does not need approval. It is orange when the pickup is late (TRK-030). It does not show on a load that is only "Booked" (no carrier yet) or "Canceled". Saving does the following.

- The stop turns green and gets the actual pickup time.
- The shipment status changes from "Scheduled" to "In transit".
- The carrier can no longer be removed (section 4.3).
- The load leaves the "Confirm pickups" queue and the badge count drops.
- Planned dates on the stop and load do not change; the actual time is stored and shown instead.

TRK-015 Delivered

The blue **Delivered** button shows on a delivery stop under the same conditions as TRK-014, and not on loads that are not "In transit". Saving does the following.

- The stop turns green with the actual delivery time.
- The status changes from "In transit" to "Delivered".
- Tracking at Trucker Tools stops (TRK-060).
- The load leaves the "Confirm deliveries" queue.
- Billing becomes available (section 4.5).
- If the customer requires a POD and none is on file, the "POD is required" banner appears (TRK-081).

TRK-016 Stop that is both a pickup and a delivery

The button reads **Complete** and records both the delivery and the pickup. If the second fails, the first stays saved and the window shows the error; pressing the button again saves only the missing one.

TRK-017 Time zones

Times are shown in the stop's time zone; Central time if the stop has none.

TRK-018 What the planned dates do

Recording events never changes the planned stop dates, pickup date or appointments. Actual times are stored separately and shown first on the stop card. (The planned dates are terms of the signed rate confirmation, so changing them would send it back to draft.)

Tracking updates, log, edit, delete and undo

TRK-019 Tracking log between stops

Under every stop except the first, a log shows events oldest first, joined by a green line.

Part	Content
Date and time	Bold date "Fri, Oct 9" and the time "2:48 pm" in the event's time zone.
Who	Small line with the name of the user who entered it, with a people icon. Events from the tracking service show no name.
Place	"City, ST" in bold.
Note	Under the place, for example "Pickup (Arrived at origin)".
Marker on the line	"PICK" for pickups, "DROP" for deliveries, "IN" for arrivals, "ETA" for ETAs. Other updates show a small green dot.

- Deleted events are not shown.
- The system's automatic ETA is hidden when a person has entered an ETA for the same stop.

- Once the load is delivered, the log shows only the pickup and delivery events plus a dashed button "N more updates ›"; click to see all, then it reads "N fewer updates". While in transit, all events show.
- A broker-only dashed link "+ add tracking update" under the log opens the window in "Tracking update" mode for the delivery stop once the pickup exists, otherwise for the pickup stop.

TRK-020 Edit an event

Clicking an event row (or pressing Enter on it) opens the same window filled in; broker users see a pencil on hover. Only events entered by a person can be changed. Events from Trucker Tools open read-only (fields disabled, no Save, no Delete). A person corrects an automatic event by adding their own event for the same stop; the person's entry wins. Trying to change an automatic event any other way shows "Automatic updates cannot be edited".

TRK-021 Delete and undo

Delete removes an event. "Deleted tracking event" appears with an **Undo** link that restores it. Deleting or editing recalculates the stop, the status and the queues:

- If the removed event was the only pickup, the load goes back from "In transit" to "Scheduled".
- If it was the only delivery, the load goes back from "Delivered" to "In transit".

TRK-022 Messages

Situation	Message
New event saved	"Saved tracking event"
Event changed	"Updated tracking event"
Event deleted	"Deleted tracking event" (with Undo)
Browser blocks the request (for example an ad blocker)	"Failed to save the event. If you have an ad blocker, disable it and try again."

TRK-023 Which event sets a stop's time

For each stop and event type, an event entered by a person wins over an automatic one; among several, the newest wins.

TRK-024 Shipment status follows the events

Condition	Shipment status
No pickup recorded	Scheduled
First stop picked up	In transit
Last stop completed (delivered)	Delivered

Condition	Shipment status
Status moves only for loads that are "Scheduled", "In transit" or "Delivered"; events never move a "Booked", "Requested" or "Canceled" load. On a "Booked" load only ETA, In and free tracking updates are allowed. (All statuses: SHP-075.)	

TRK-025 Order rules and other blocking messages

Rule	Message
Pickup, delivery or arrival on a stop needs the previous stop completed	"Complete the previous stop first"
A change that would leave a stop unfinished while a later stop has a pickup or delivery	"Remove the later stop's updates first"
Pickup or delivery on a load with no carrier yet	"Cover the load first"
Any event on a canceled load	"Shipment is canceled"
Any event on a load that is not booked yet	"Shipment is not booked"
Event not found	"Tracking event not found"

TRK-026 Tracking after the load is edited or canceled

- Editing a shipment that removes a stop or moves items recalculates the stops and status in the same step.
- Canceling a load stops tracking. Un-canceling does not restart it; a broker turns the tracking switch back on (TRK-056).

Late and at-risk warnings

TRK-030 Late pickup

A "Scheduled" load whose stop date is before today shows the orange dashed card border, the orange triangle with the tooltip in TRK-003, and an orange **Picked up** button. It also appears in "Confirm pickups" (TRK-070).

TRK-031 Late at a stop

A completed stop shows small grey lateness text (for example "2h 9m late") when the actual time is outside the appointment or open window (TL only).

TRK-032 Tracking alerts

Trucker Tools can report an alert on a load. The latest is shown in the tracking dialog (TRK-057) and as a small icon on the load's row in lists:

- red route icon: out of route
- orange circular arrow: behind schedule

- green clock: on time or ahead of schedule

Other alert texts in the dialog: "At Pickup", "Cannot Determine", "Location Off", "Location Hidden", "Phone Off", "GPS Off", "No Phone", "Past Appointment Time" and "Possible Detention".

TRK-033 Late delivery

A load "In transit" with a delivery date earlier than now appears in "Confirm deliveries" (TRK-071).

Driver details

TRK-040 Driver strip (truckload loads, broker users)

A grey strip with a steering-wheel icon sits above the stops of each carrier on the load.

State	What it shows
No carrier assigned	Grey text "Needs a carrier"
Carrier assigned, no driver data yet	The carrier name only
Carrier and driver	Row 1: driver name (bold) and driver phone. Row 2 (small, grey): carrier name, "Truck ", "Trailer ".
Right side	The tracking status pill (TRK-055)

The whole strip is a button (screen-reader label "Update driver information for "), highlights on hover, and opens the "Driver & tracking" window. Customers and carriers do not see it.

TRK-041 "Driver & tracking" window

Field	Input / options	Required	Default	Rules and messages
Driver name	Text	Yes	Current value	
Driver phone	Phone input, USA by default	Yes	Current value	A complete US mobile number (10 digits). Also the number Trucker Tools texts.
Tractor #	Text	No	Current value	
Trailer #	Text	No	Current value	
Save	Blue button	-	-	Driver name and phone are required; tractor and trailer are optional (as on the carrier's form, RCF-013). Failure: "Error updating driver details". The window closes on success.

The carrier enters the same details when signing the rate confirmation (section 4.3). Brokers can correct them here any time while the load is "Scheduled" or "In transit" and not canceled.

TRK-042 Changing driver details updates the tracking

If a tracking load already exists at Trucker Tools, changing the driver, truck or trailer updates that same tracking load. It never creates a second one and does not stop and restart tracking.

TRK-043 PICKUP number

On the first stop, brokers can enter the carrier's pickup number inline. The card shows "PICKUP" with a grey "+ add number"; click, type, and press Enter or click away to save. Editable until the load is picked up. It is a rate confirmation term: if the carrier has already signed, changing it sends the rate confirmation back to draft (RCF-018).

Automatic tracking through Trucker Tools

10-4 uses its own Trucker Tools account. Trucker Tools follows the driver's phone (through the Trucker Tools app) or the truck's electronic logging device (ELD).

TRK-050 Tracking switch when covering a load

The cover form (section 4.3) has a switch "Track with Trucker Tools", on by default. It shows when Trucker Tools is connected for 10-4. When off, the load is not tracked.

TRK-051 When tracking starts

- When the load is covered, the system prepares tracking. The pill reads "Awaiting rate con".
- Tracking starts only after the carrier signs the rate confirmation: the system then sends the load to Trucker Tools with the driver phone from the signed rate confirmation.
- Trucker Tools texts the driver a link to the app, or reads the truck's ELD.
- If the carrier signs again after accepting changes, the same tracking load is updated; a second is never created.
- If a start request fails, the system retries up to three times. If it still fails, the failure is recorded on the load's timeline and the pill stays at "Awaiting tracking start". A broker can then start tracking with the switch in the tracking dialog.

TRK-052 When tracking stops

Tracking stops when:

- the load is marked "Delivered" (the pill reads "Tracking completed");
- the load is canceled;
- the carrier is removed from the load (dropped or replaced);
- a broker turns the tracking switch off (the pill reads "Tracking cancelled").

A stop request wins over a start that has not completed. Un-canceling a load does not restart tracking.

TRK-053 Driver phone rules

The phone must be a complete 10-digit US number. A start or update with an invalid phone is refused before anything is sent, and the reason is shown on the load. Stopping tracking is never blocked by a phone rule.

TRK-054 What is sent to Trucker Tools

Only what tracking needs: the load number, driver name and phone, truck and trailer numbers, the carrier's company name and MC number, the broker's company name, and for each stop the address, city, state, ZIP and a planned time (the appointment, then the open time, then 8:00 am local). Customer names, contact people, phone numbers, notes, instructions, references and all money amounts are never sent.

TRK-055 Tracking status pill

The pill sits at the right of the driver strip: text on the left, the Trucker Tools mark (red "T") on the right. It is a button that opens the tracking dialog, shown when tracking is set up for the load.

Pill text	Meaning
"Awaiting rate con"	The carrier has not signed yet. Tracking has not started.
"Awaiting tracking start"	Signed. The load is sent and waiting for Trucker Tools to begin.
"Tracking active"	The driver's phone is reporting location.
"Tracking via ELD"	Location comes from the truck's ELD.
"Now tracking via app"	Tracking switched from ELD to the driver's app.
"ELD error"	The ELD could not be read. Use manual updates, or ask the driver to use the app.
"Tracking disabled" (grey)	The driver turned location off, or tracking is not running.
"Tracking cancelled"	Stopped by a broker, a cancel or a carrier change.
"Tracking completed"	Delivered; tracking ended normally.

Before the carrier has signed, the pill always reads "Awaiting rate con", whatever Trucker Tools reports.

TRK-056 Tracking dialog

Clicking the pill opens a dialog titled "Trucker Tools tracking".

- A switch turns tracking on or off. Available only after the rate confirmation is signed, while Trucker Tools is connected, and not while another change is in progress. On starts tracking; off stops it. Frozen on canceled and delivered loads.
- A large status line shows an icon and the pill text, and on its right a link button "Trucker Tools" that opens the load on the Trucker Tools website in a new tab.
- Under it an information box (blue information, orange warning, red error) shows a short title and help text for the state. Examples: "Tracking stopped" with "Restart tracking by toggling it back on"; "Ask driver to start tracking"; "Driver disabled location services" with "Please have driver enable location services and

set to "Always" for Trucker Tools App"; "ELD active" with "Load is being tracked via ELD/telematics. (not via mobile app)". An error from Trucker Tools shows in a red box with its message.

TRK-057 Alerts in the dialog

The latest alert (TRK-032) shows in the dialog with the time of the last update.

TRK-058 What comes back from Trucker Tools

- Location updates from the driver appear in the tracking log as updates with city and state, between the stops.
- Arrival at the destination appears as an "In" event.
- Pickup and delivery are not set automatically in the first version; a broker confirms them with **Picked up** and **Delivered** (TRK-070, TRK-071).
- All automatic events are read-only (TRK-020) and a person's entry overrides them.

TRK-059 Changes to a running load

Changing a stop's address, date or times, or saving an appointment, updates the load at Trucker Tools. The latest data always replaces the previous data.

TRK-060 Delivered stops tracking

When the last stop is delivered, tracking stops and the pill reads "Tracking completed".

TRK-061 Safety

- Only one system tracks a load at a time.
- Tracking is never started twice for the same load.

TRK-062 Map

The shipment page shows the planned route as a line between the stops (section 4.2). Showing the truck's live position on the map is planned for later.

Queues: Confirm pickups and Confirm deliveries

These lists of loads needing a broker's action are reached from the sidebar (section 4.1); the shipments list is in section 4.2.

TRK-070 Confirm pickups

- Sidebar row "Confirm pickups" with an orange count badge (label "Confirm pickup" when the count is 1).
- Page title: "Shipments to confirm pickups".
- Contents: all "Scheduled" loads whose pickup date is before today (the start of the user's local day).
- Sorted by pickup date, oldest first; the sort can be changed.
- Rows are as in the shipments list, with a light-blue status dot, the pickup column at full strength, the delivery column dimmed, and the carrier name and cost at the right. A blue hourglass before the carrier

name means the rate confirmation is not signed yet. A red tracking-alert icon under the BOL number means a tracking problem.
- Buttons: "+" (create shipment), Export, Sort.
- Empty state: "No active shipments."
- To confirm: open the load, check the pill and the log, call the carrier if needed, then press **Picked up** on stop 1. The load leaves the list.
- Other options for a missed pickup: edit the pickup date (the rate confirmation returns to draft and the carrier confirms again), or remove the carrier (section 4.3).

TRK-071 Confirm deliveries

- Sidebar row "Confirm deliveries" with an orange count badge (label "Confirm delivery" when the count is 1).
- Page title: "Shipments to deliver".
- Contents: "In transit" loads whose delivery date is earlier than now.
- Sorted by delivery date, oldest first. The sort cannot be changed; no sort button.
- Rows: pickup column dimmed with the actual pickup time and a green origin dot; delivery column at full strength with "Appt @ ..." when an appointment exists; carrier and cost at the right; tracking-alert icons (TRK-032).
- Buttons: "+" and Export.
- Empty state: "No active shipments."
- To confirm: open the load, press **Delivered** on the last stop, then upload the POD (TRK-080).

TRK-072 Badges stay current

Badge counts update when any shipment changes, on reconnect and on navigation, not at midnight until the next refresh (NTF-002).

TRK-073 Bulk and quick actions

There is no bulk "Picked up" or "Delivered"; each load is confirmed from its own page.

TRK-074 Export

The Export button on both queues downloads the loads in the current list as a spreadsheet file (SHP-013).

Proof of delivery (POD)

TRK-080 Upload POD

A POD is the signed bill of lading. On the last stop of a delivered load, brokers see:

- **Upload POD** (blue outlined) when no POD exists, or an orange **Upload POD** when the customer requires a POD for this type of load.
- **Upload another POD** when one already exists in upload mode.
- **View POD** with a small document icon (tooltip "POD uploaded ") when a POD exists.

A POD can be a PDF or an image (JPEG, PNG, BMP, AVIF, GIF, TIFF, WEBP, HEIC), up to 25 MB. The same upload is available from the Documents page, the carrier bill page and the customer invoice page (section 6 Documents). Several PODs can be added. A user with permission can remove a POD from the Documents page.

TRK-081 "POD is required" banner

A white banner with an orange outline and a pulsing orange warning triangle shows at the top of the shipment page, with the bold text "POD is required " and an orange **Upload POD** button. It shows only when all are true: the user is a broker, the load is delivered, the customer requires a POD for this type of load, the invoice is not completed, and no POD exists for the last carrier's load. It disappears when a POD is uploaded.

TRK-082 POD requirement per customer

On each customer (section 4.7, Accounting) two switches decide whether a POD is required: "TL POD required" for truckload and "LTL POD required" for LTL. Both are off by default.

TRK-083 What a required POD blocks

- On the customer invoice page, a yellow box "POD required before you can send invoice" with an **Upload POD** button shows, and **Send invoice** is disabled until a POD is uploaded (section 4.5).
- Before pickup, the invoice page shows a grey box "Invoice can't be sent until the shipment has been picked up." and Send is disabled.

TRK-084 POD on the invoice e-mail

When the customer setting "Combine PDFs (bill and POD)" is on, the POD file(s) are attached to the invoice e-mail next to the invoice PDF, not merged (CUS-015, DOC-012, EML-030).

TRK-085 POD in billing lists

- The Bills and Invoices page has a tab "POD" ("Upload missing POD") listing delivered loads whose customer requires a POD, where no POD is on file and the invoice has not been sent.
- A delivered load with no POD shows an orange question icon with the tooltip "Missing POD" in the billing list (broker users only); with a POD it shows a check "Delivery confirmed".
- On the carrier bill, the bill card shows **Upload POD** until a POD is on file for that carrier's load.

TRK-086 Missing POD and carrier bill approval

A missing POD does not block approving the carrier bill for payment; the bill card only shows **Upload POD** (TRK-085; WF-019).

LTL loads

TRK-090 PRO number (LTL)

On an LTL load the Locations header shows "PRO" with a grey "+ add number". Broker users click it, type the number and press Enter or click away to save; a spinner shows while saving and a red message on failure.

Customers see the PRO number but cannot edit it; it is hidden when empty. It can also be entered in the tracking window.

TRK-091 Track button (LTL)

A blue outlined **Track** button with an external-link icon opens the LTL carrier's own tracking page in a new tab, using the PRO number, the carrier pickup number or the BOL number, whichever the carrier needs. Available for the LTL carriers 10-4 uses (section 4.6). It shows once the pickup request was sent to the carrier and, for customers, once the load is picked up. It turns grey after delivery.

TRK-092 LTL events

- The LTL carrier's pickup request number shows as "PICKUP " on stop 1.
- Events reported by the carrier (for example "assigned to a driver for pickup on ...", picked up, delivered) appear in the log as automatic events. A broker confirms **Picked up** and **Delivered** by hand when the carrier's information is late or missing.
- The destination date shows "~" until delivery (TRK-003).
- No ETA, In or Out rows.

What customers see

TRK-095 Customer and contact view

Customers see tracking through the shipment page in their portal and through the secure link in the BOL e-mail (section 4.11); there is no separate tracking page. The page shows:

- a green banner "Shipment scheduled", or "Shipment delivered" after delivery;
- every stop card with its dates, times, ETA, arrival, pickup and delivery times;
- the planned route map;
- **View POD** once delivered and a POD exists; otherwise **BOL** and **Labels**.

Customers never see the driver strip, tracking pill, Trucker Tools link, private notes, prices, costs or the carrier's contact details. If the account hides carrier names from customers, the carrier name is hidden too.

TRK-096 Tracking link for the driver

The text message to the driver comes from Trucker Tools, not the system (section 5).

Who can do what

Action	Owner	Member	Customer	Carrier
See stop cards and times	Yes	Yes	Yes (without private data)	Only on the rate confirmation page
Add or change appointments, ETA, In, Out, Picked up, Delivered, updates	Yes	Yes	No	No

Action	Owner	Member	Customer	Carrier
Edit driver details and PICKUP number	Yes	Yes	No	Enters driver details when signing
Switch tracking on or off	Yes	Yes	No	No
Upload, view POD	Yes	Yes	View only	No
Edit or delete an event	Yes	Yes	No	No
Work the queues	Yes	Yes	No	No

4.5 Billing and payments

> **In short:** This part of the system is where 10-4's back office pays carriers and gets paid by customers. It has one work area, "Bills & Invoices", with a tab for each job (upload a carrier bill, approve it, pay it, send a customer invoice, chase a missing POD, follow up on late or disputed invoices). A separate "Late invoices" board ranks all customers by their late balance. From there staff open a **carrier bill** page (money owed to a carrier) or a **customer invoice** page (money owed by a customer), record payments, and keep QuickBooks in step. Office staff (Owners and Members) use it; customers and carriers never see these screens.

Requirement ID prefixes:

- **BIL** – the Bills & Invoices work area (bill side) and the carrier bill page.
- **INV** – the invoice side of the work area and the customer invoice page.
- **PAY** – payments, payment lists, the customer Invoices page, statements, aging, the Late invoices board, credit figures and disputes.

Bills & Invoices (work area)

Reached from: the "Bills & Invoices" item in the left menu (office staff only).

What it shows: one table, one row per load: the BOL number, the load's carrier bill card(s), then the load's customer invoice card. A thin line joins each bill card to the invoice card. The tabs are work lists: they show only the loads that need a given job done.

BIL-001 Open the work area

The system will open the work area on the "Open" tab when the user clicks "Bills & Invoices" in the left menu. The page title is "Bills & Invoices". A small loading icon shows next to the title while the list refreshes.

- Any unknown address or tab name opens the "Open" tab; it never shows an error page.
- The "All" tab is reached from its tab; the left-menu link does not need to point to it.
- The tab bar, sort icon, filter box and the two header buttons always appear in the same places.

BIL-002 Tabs of the work area

Three groups: the first has "All" and "Open"; the second is for **bills** (carrier side); the third for **invoices** (customer side). A tab lists only matching loads; search words and filter chips stay when the user changes tab, but the sort goes back to the tab's default.

Group	Tab (short label)	Full name (screen readers, page title)	Which loads are listed
Both	"All"	"Bills & Invoices"	Every load that is Scheduled, In transit, Delivered or Canceled. Nothing is highlighted: both columns are bright.
Both	"Open"	"Open bills & invoices"	Loads that still have an unpaid carrier bill, or a customer invoice that is a draft or open. Both columns bright.
Bills	"Upload"	"Bills to Upload"	Delivered loads where a carrier (or other vendor) bill has no bill number yet.
Bills	"Approve"	"Bills to Approve"	Unpaid bills that have a bill number and are not yet approved.
Bills	"Pay"	"Bills to Pay"	Unpaid bills that are approved (due or not).
Bills	"Overdue"	"Overdue Bills"	Unpaid bills that have a bill number and a due date before today, approved or not. The count is shown in orange. The tab is hidden when its count is 0.
Invoices	"POD"	"Upload missing POD"	Delivered loads whose customer requires a POD, where no POD is on file and the invoice has not been sent.
Invoices	"Send"	"Invoices to Send"	Loads that have been picked up (In transit or Delivered) with an invoice not yet sent, and where the POD rule is met (the customer does not require a POD, or a POD is on file).
Invoices	"Outstanding"	"Outstanding Invoices"	Invoices that were sent and are not fully paid.
Invoices	"Disputed"	"Disputed Invoices"	Loads whose invoice is marked "In dispute".
Invoices	"Overdue"	"Overdue Invoices"	Sent, unpaid invoices whose due date is before today. The count is shown in orange. The tab is hidden when its count is 0.

- There is no "Invoices to Factor" tab, because 10-4 does not factor its own invoices (see section 1.7).
- On a bill tab the invoice column is dimmed; on an invoice tab the bill column is dimmed. Hovering or focusing a dimmed card makes it bright.
- A bill of a carrier dropped from the load is not listed or counted (BIL-029).
- Canceled loads appear only in "All" and where a bill or invoice is still unpaid.

BIL-003 Tab counts

The system will always show a number on each tab that has a count: "Upload", "Approve", "Pay", "Overdue" (bills), "POD", "Send", "Outstanding", "Overdue" (invoices). "All", "Open" and "Disputed" show no number; neither does a count of 0. Counts update without a page reload when anything changes the lists (bill saved, invoice sent, payment recorded, dispute marked) and follow the active search and filters.

BIL-004 Rows of the work area

Part	Content
BOL cell	The BOL number as a link to the shipment page. Under it a small arrow and a date ("Mon d"; the year is added in small type when it is not the current year). The arrow is green when the load is delivered, gray otherwise. The date is the delivery date if delivered, otherwise the planned delivery date. Tooltip: "Delivered on" or "Will deliver on" plus the date.
Bill column	One card per carrier or vendor bill on the load. A load with a replaced carrier shows two stacked bill cards. A load with no carrier yet shows a gray empty block. Each card links to the carrier bill page (BIL-010).
Invoice column	One card for the load's customer invoice, linking to the customer invoice page (INV-006).

BIL-005 Bill card

The card shows a message (sometimes a second line) on the left, and the carrier name with the bill amount on the right. For a non-carrier vendor (towing, lumper and similar) the vendor's name and a small vendor-type icon are shown instead. The amount is the **expected cost** of that carrier or vendor on the load (the sum of its cost lines). The first matching rule decides message and color.

#	When	Look	Message
1	The load is canceled	Dashed gray	"Canceled"
2	The bill is paid	Green	"Paid"
3	The customer requires a POD for this type of load (TL or LTL), this is the current carrier, and no POD is on file for this carrier	Orange	"Upload POD"
4	The load is delivered and the bill has no bill number	Orange	"Upload bill"
5	Delivered, has a bill number, not approved	Orange	"Need to approve", and a second line "Due ..." if a due date is set
6	Delivered, approved, due date today or later	Gray	The due text
7	Delivered, approved, due date before today	Red	The due text
8	The load is Scheduled	Dashed gray	"Scheduled"
9	The load is In transit	Dashed gray	"In transit"
10	Anything else	Dashed gray	The load status in capitals-and-lowercase

- Due text: "Due yesterday", "Due today", "Due tomorrow", "Due in N days", "Due N days ago" (counted by calendar date).
- A POD on file but not tied to a carrier counts for the current carrier. For a replaced carrier, the POD must belong to that carrier.

- Hovering a card shows a blue ring.

BIL-006 Filter, search and sort

The system will show the same filter box as the shipment list (section 4.2): search words, a "View shipment filters" button and filter chips. Here the Status choices are only "Scheduled", "In transit", "Delivered" and "Canceled". No filter is set when the page first opens. A sort icon opens a menu:

Choice	Notes
"Pickup date / old to new"	Default. The oldest pickups are on top, so the oldest unpaid work comes first.
"Pickup date / new to old"	
"Created date / new to old"	

BIL-007 Loading more rows and empty state

The system will load the list in pages as the user scrolls, with the total available for the counts. Scroll position is remembered per tab and reset when the filters change. With no rows the page shows a gray block with "No bills or invoices yet". On narrow screens the BOL column is hidden and the payment button reads "+ Payments".

BIL-008 Header buttons

The header row shows "BOL", "Carrier bills", "Customer invoices". At its right end:

- "+ Record customer payment" (gray outline; "+ Payments" on narrow screens). Opens the payment form in PAY-001. Hidden for non-Owners when the account restricts accounting actions to Owners (BIL-035).
- "Send invoices" (blue), only on the "Send" tab. Opens the bulk send window (INV-004). Disabled when the "Send" count is 0.

BIL-009 Live refresh

While the work area is open, the system will refresh the list and counts automatically when a document is added or removed, a tracking event is added, a bill is saved or approved, a payment is added or removed, an invoice is sent or changed, or a dispute is marked or cleared. The "Open", "All" and "POD" tabs refresh for any of these. See section 4.12.

Carrier bill page

Purpose: for one carrier (or other vendor) on one load: upload the bill, record its number, amount, dates, remit-to address and accounting contact, compare it with the expected cost, approve it for payment, record payments, mark a dispute, upload the POD, and see the QuickBooks sync state.

Reached from: a bill card in the table; the "Carrier bill" tab on the invoice page; the carrier bill tile on the shipment's documents page; the bill link on the shipment page. The close button (X) returns to the page the user came from, otherwise to the shipment.

Look: a full-screen dark document view with the close button and a search button at the top. A left column holds the documents; a right column (fixed while scrolling) holds the numbers and actions.

BIL-010 Bill page layout and header

The left column shows, top to bottom:

1. A tab bar: one tab per bill on the load, named " bill" (for example "Carrier bill"), with the carrier's name (a link to the carrier) under it. On the right, a tab "Invoice" with the customer's name under it, linking to the invoice page.
2. A shipment header: "BOL ", equipment (for example "Dry Van"), "PRO " if there is one, origin and destination with city, state, pickup and delivery dates, and a two-dot progress line that turns green when picked up and delivered.
3. A strip "Target cost | Profit | Price" with an "Expand itemized view" button that opens the load's Cost & Price lines for this carrier. Office staff can change cost lines there and press "Save cost & price"; the expected bill amount follows the cost lines (section 4.2).
4. The bill document(s) (BIL-011).
5. The POD document(s) (BIL-027). While loading it shows a spinner and "Loading bill". If the bill cannot be found it shows a "not found" page.

BIL-011 Bill documents and "Upload bill"

The system will show each uploaded bill PDF in a viewer with the file name, a download button and a remove button (with a confirmation). With no bill PDF the page shows a dark box with a button "Upload bill" (blue outline), which turns orange when a bill number has been saved but the PDF is missing. The button opens the edit page (BIL-012).

BIL-012 Edit bill page

The system will open the "Edit bill" page for users who may edit bills (BIL-035); others see the "not found" page. Left: the title "Edit bill", the carrier (or vendor) name, "BOL ", origin and destination with dates, and the bill document area. With no bill PDF the whole left area is a drop zone with a button "Upload bill" and the text "Drag bill here". Existing PDFs are shown with a remove control and an "Upload bill" button below. After a failed save the "Upload bill" button turns orange when the PDF is missing. Right: a back arrow ("close bill edit") and the form:

#	Field	Input / options	Required	Default	Rules & messages
1	"Bill/invoice number"	Text, up to 100 characters	Yes	Saved bill number	"Bill/invoice number is required". If the load has a PRO number, a gray strip "PRO " under the field fills the field when clicked.
2	"Mail payment to"	A button showing the address, or the placeholder "Add payment address"; opens the address window (BIL-013)	Yes	The bill's saved address, else the carrier's saved payment address	"Payment address is required"

#	Field	Input / options	Required	Default	Rules & messages
3	"Carrier accounting contact"	A button showing name, e-mail and phone, or the placeholder "Add payment contact"; opens the contact window (BIL-014)	Yes	The bill's saved contact, else the carrier's saved payment contact, else the carrier contact from the load	"Payment contact is required"
4	"Bill amount"	Money, right aligned, placeholder "$0.00"	Yes	Saved bill amount	"Bill amount is required". If an expected amount exists, a strip "Expecting $X" under the field copies it into the field when clicked.
5	"Bill date"	Date	Yes	Today	"Bill date is required"
6	"Days to pay"	Number 0–120	—	Computed from the due date	Not saved on its own; it only moves the due date. Outside the range: "Days to pay must be between 0 and 120".
7	"Due date"	Date; cannot be before the bill date	Yes	Bill date or base date plus the carrier's payment terms	"Due date is required"; "Due date can not be before the bill date"
8	(banner)	Orange "Due in day(s)" (N counted from today; can be negative)	—	Computed	Information only
9	Button	"Save bill" (blue, full width, disabled while saving)	—	—	A failed save shows a red box "Error updating bill"

- Saving returns the user to the bill page. The bill can be saved again as often as needed; every change is kept in the load's history with who and when.
- Saving is refused for a bill that is canceled or dropped ("This bill can not be changed.").

BIL-013 "Mail payment to" window

Field	Input / options	Required	Rules
"Factoring with"	Select, placeholder "Select a factor". Lists the factoring companies, sorted by name, each with its logo.	No	Choosing a factor fills the address with that company's remit-to address; city, state and ZIP are then no longer required.
"Google address search"	Address search box	No	Fills the fields below
"Company"	Text	Yes	
"Country"	USA, CAN, MEX or another country	Yes	
"Street"	Text	Yes	

Field	Input / options	Required	Rules
"Line 2"	Text	No	
City, state, ZIP	For USA, CAN and MEX: one place field that fills city, state and ZIP. For other countries: separate "City", state/province and "Postal Code".	Yes unless a factor is chosen	
Button	"Save address"		

Carriers often ask to be paid through a factoring company; the bill is then paid to the factor's address (factoring company list: section 4.8).

BIL-014 "Carrier accounting contact" window

Three required fields: "Name:" (placeholder "Name"), "Email:" (placeholder "Email"), "Phone:" (US phone format). Button "Save contact". If incomplete: "Payment contact is required".

BIL-015 Bill dates and payment terms

The system will set the bill date to today and work out the due date from the carrier's payment terms:

- Terms come from the carrier's own payment terms ("N days from Vendor bill / Pickup / Delivery"), otherwise from the account's "Vendor payment terms" (default 30 days from the vendor bill). See sections 4.10 and 4.8.
- "from bill" counts from the bill date; "from delivery" and "from pickup" from the load's delivery or pickup date.
- The due date is never earlier than the bill date.
- Changing "Bill date" moves the due date when terms count from the bill date; otherwise it recalculates "Days to pay". Changing "Days to pay" moves the due date. Changing the due date recalculates "Days to pay".
- When terms do not count from the bill date, a note under the fields reads "Set to <delivery|pickup> + " while the due date equals the rule, or a link "Reset to day(s) from <bill date|delivery|pickup>" when it does not. Clicking the link restores both dates.

BIL-016 Bill header on the bill page

The right column starts with a pencil button (opens BIL-012, only for users who may edit). Then:

- Before a bill number exists: "Expected bill" and the expected amount.
- After a bill number exists: "Bill " with a copy button, and an arrow that opens "Payment address:" and "Payment contact:" blocks (only when both are saved). The big amount is the **expected cost**. Below it "Due " if a due date is set.
- When paid: a green banner "PAID in full on " (the date of the last payment).

BIL-017 Documents for users who cannot upload bills

When a user may not edit bills, the "Upload bill" box is replaced by "Email bills to <10-4's accounting mailbox>" with a copy button (tooltip "Copy email") and a "Send email" button that opens the user's mail program. With no accounting mailbox set the text says "your accounting department".

BIL-018 Variance banner

When the bill amount from the carrier's bill differs from the expected cost, the system will show an orange banner above the buttons:

- Title: "Variance of $X".
- Text: "Bill of $ is $X less than expected" (carrier billed less) or "... more than expected" (carrier billed more).
- It disappears when the amounts match. Before approving, the user can change cost lines ("Expand itemized view"), for example to add detention or lumper charges.

BIL-019 Accounting instructions

The system will show the customer's accounting instructions (a short rich-text note kept on the customer) under a small label "Accounting instructions". Owners can edit it (pencil with tooltip "Edit note", a box with placeholder "Accounting instructions...", button "Save"); an empty note shows Owners the link "+ Accounting instructions". Other users see it read-only. The same note shows on the invoice page.

BIL-020 Approve to pay

The system will show a green full-width approve button in the right column when the bill has a bill number, is not paid and has a balance above $0, the user is allowed to approve (BIL-035), and the bill is not already approved with a payment recorded.

Situation	Button label
Expected cost equals the bill amount	"Approve to pay"
The carrier billed **less** than expected	"Approve to short pay"
The carrier billed **more** than expected	"Approve to overpay"
Already approved	A green check and "Approved", and a small gray outlined button "Undo"

- Approving needs a bill number; otherwise: "This bill can not be approved."
- Approving moves the bill from the "Approve" tab to the "Pay" tab and starts the QuickBooks sync (BIL-031).

BIL-021 Amount used for payment

- Payments, the balance and "Paid" follow the **expected cost** (the sum of the carrier's cost lines on the load).
- QuickBooks receives the carrier's billed amount ("Bill amount"); the variance banner compares the two.

- To pay the billed amount, the user first changes the cost lines so the two match, or pays less or more on purpose using the "short pay" or "overpay" labels.

BIL-022 Undo approval

The system will let a user press "Undo" on an approved bill while no payment is recorded. The bill returns to the "Approve" tab. If a payment exists: "Remove the payments first." Undo does not change anything in QuickBooks (BIL-031).

BIL-023 Approval history

Every approval and undo is saved in the load's history with the user and the time.

BIL-024 Record carrier payment

The right column shows a white outlined button "+ Record payment" when the bill has a balance above $0 and the user may record payments (BIL-035). It opens a window:

Field	Input / options	Required	Default	Rules & messages
"Payment date" (hint on the right: "Due by <Day, Mon d>" when a due date exists)	Date	Yes	Today	Not before the bill date; not more than 90 days in the future
"Amount"	Money	Yes	The bill's balance	Cannot be more than the balance: "Amount can not be more than the balance of $X". Cursor starts here.
"Method"	ACH, Apple Pay, Credit card, Cash, Cash App, Check, Comchek, Google Pay, PayPal, T-Chek, Venmo, Wire, Zelle	Yes	None	A method must be chosen; the system never assumes one
"Memo"	Text, up to 500 characters	No	Empty	
Button	"Save payment" (green, full width)			Failure shows the red box "Error updating bill"

- A payment always applies to the bill being viewed, even when the same carrier has two bills on the load.
- A payment that brings the balance to $0 marks the bill paid (BIL-025).
- A repeated click or a retry never records the payment twice.

BIL-025 Payments, balance and "Paid"

The right column lists each payment as "Payment " (with its memo) and the amount, with a trash button. Under the list, "Balance $X" shows while the bill is not paid. The bill is **Paid** only when at least one payment is recorded and the balance is $0 or less. A canceled load with a $0 bill is never shown as Paid. Clicking a payment row opens the payment window (PAY-010). The "+ Record payment" button and the balance row disappear when the bill is paid.

BIL-026 Remove a carrier payment

The trash button asks "Are you sure you want to remove this payment?". On confirm the payment is removed, the balance returns, and the bill goes back from Paid to its earlier state. If the payment covers several loads, the message is "Remove this payment from each shipment first." (the user removes it from the payment window).

BIL-027 POD on the bill page

The system will show the carrier's POD documents under the bill (with "Uploaded by ", file name and size, download, and a remove button with a confirmation). A sticky bottom button reads "Upload POD" (orange) when there is none, or "Upload another POD" (gray) when there is one. It is shown for freight carriers still on the load. Upload steps: section 4.4; document list: section 6.

BIL-028 "In dispute" on a bill

The system will show an "In dispute" switch in the right column. On marks **this carrier bill** as in dispute and shows an orange pulsing "Disputed" label; off clears it. It is separate from the mark on the customer invoice (PAY-026). A failure shows the red box "Error updating bill".

BIL-029 Several bills on one load: replaced carrier and TONU

The system will keep one bill per carrier or vendor on the load.

- A carrier dropped from a load without a TONU has its bill canceled and no longer shown or counted.
- A carrier dropped **with** a TONU amount keeps a second bill for the TONU ("Truck ordered not used"), so the load shows two bill cards, one per carrier, each paid separately; the bill page tab bar shows one tab for each. The TONU amount is also added to the customer's price on the invoice (section 4.3).
- A dropped carrier's bill that already has a payment cannot be dropped until the payment is removed ("Remove the payments first.").
- The new carrier's bill is a normal bill, with its own number, amount, dates and approval.

BIL-030 Bills for other vendors

Every vendor added to a load (towing, lumper, other) automatically gets its own "expected" bill. These use the same page, tabs and rules as carrier bills; their cards show the vendor name and a vendor-type icon. A vendor can be set up so its bills are not sent to QuickBooks (the vendor's "Push bills" switch; section 4.8).

BIL-031 QuickBooks sync of a bill

The system will send a bill to QuickBooks as follows.

- When a bill is approved, the system creates the bill in QuickBooks within a short time, with the carrier's bill number, bill date, due date, **the carrier's billed amount**, the remit-to company and address, the BOL in the memo, and the expense account chosen in Settings (section 4.10).
- Every later save of an approved bill updates the same QuickBooks bill; it never creates a second one. Approving again after "Undo" also updates the same bill.
- Payments recorded in the system, charge changes and "Undo" send nothing new.

- QuickBooks matches the carrier (vendor) by name. The account setting "Remit-to company name to vendor display name" controls whether the remit-to company name is used as the vendor name.
- A vendor whose "Push bills" switch is off is not sent.
- When QuickBooks reports a payment for a bill the system sent, the system marks the bill paid ("PAID in full on "; PAY-024, section 7).
- The sync never blocks the user: if QuickBooks fails, the bill stays approved and the problem is shown on the bill (BIL-032).

BIL-032 QuickBooks sync icon and "Retry sync" (bill)

A small QuickBooks icon appears on the bill page when the account has a QuickBooks connection (hidden otherwise). Its color shows the state; clicking it opens a window titled "QuickBooks sync" (hovering the title shows the sync state in plain words).

State	Icon color	Window text
Not sent yet	Blue / dark	"Not synced yet" / "Will sync once bill is sent"
Error	Red	"Trouble syncing" / "We tried syncing ", the error message from QuickBooks, and a collapsible "Technical details" block
Disconnected	Orange	"QuickBooks disconnected" / "Go to account settings and try to fix your connection with QuickBooks." (link to Settings > Accounting)
Success	Green	"Successfully synced" / "We synced this with QuickBooks "

- Only in the Error state the window shows a "Retry sync" link, available to users who may approve bills. A retry makes a new attempt and the icon changes when it finishes. With nothing to retry: "Nothing to retry.". A double click never makes two attempts.
- If the sync fails, the system retries automatically a few times before showing Error.
- The icon refreshes by itself when the state changes.

BIL-033 Payment terms rules (bills)

The due date of a bill follows this order: the date typed by the user; otherwise the carrier's own payment terms; otherwise the account's "Vendor payment terms" (default 30 days from the vendor bill). Terms count from the bill date, pickup date or delivery date as set. Owners set the account terms (section 4.10) and each carrier's or vendor's own terms (section 4.8). Changing terms never changes bills already saved.

BIL-034 Accounting settings this module depends on

Settings screens: section 4.10.

Setting	Used for
"Sync to QuickBooks Online" (connection, expense account for bills, switch "Sync carrier bills", service for invoices, switch "Sync customer invoices")	Whether bills and invoices are sent to QuickBooks (BIL-031, INV-021)

Setting	Used for
"Vendor payment terms"	Default bill due date (BIL-033)
"Customer terms"	Default invoice due date (INV-020)
"Cc invoices" (list of e-mail addresses)	Copies of every invoice e-mail (INV-013)
Payment settings (ACH details, check payee), set up with Stackup	Payment instructions printed on invoices (section 6)
Company option (set up with Stackup, ROL-021): only Owners upload and edit bills	Who can edit bills (BIL-035)
Company option (set up with Stackup, ROL-021): only Owners approve, pay and record payments	Who can approve, pay and record payments (BIL-035)
Customer settings: "Days to pay", "POD req'd" (TL / LTL), "Combine PDFs (bill and POD)"	Invoice due date, POD blocking, POD attachments (INV-020, INV-015, INV-013)
Carrier / vendor: payment terms, "Push bills"	Bill due date, QuickBooks sync

BIL-035 Who can edit, approve and pay

Action	Owner	Member
See the work area, bill pages, invoice pages	Yes	Yes
Upload / edit / save a bill, upload or remove a bill PDF	Yes	Yes, unless the account restricts bill upload to Owners
Approve to pay, Undo, record or remove a payment, Retry sync	Yes	Yes, unless the account restricts accounting actions to Owners
Record customer payment (all payment forms)	Yes	Same as the row above
Mark "In dispute", upload a POD, send or resend invoices, create or cancel an invoice	Yes	Yes
Edit accounting instructions	Yes	No (read-only)

When an action is not allowed the button is hidden or the system answers "Forbidden". The system enforces this on every action, not only by hiding buttons. Customers and carriers cannot open these pages.

BIL-036 Extra or late carrier bill after approval or payment

A carrier (for example an LTL carrier adding an extra charge after delivery) can send a second bill after the first was approved or paid. The system keeps one bill per carrier or vendor on a load (BIL-029), so staff handle it on that bill:

- Staff change the cost lines (and, if the carrier re-billed, the bill number and amount) and save. The variance banner (BIL-018) shows the difference.
- If already approved and nothing is paid, staff press "Undo" and approve again. The same QuickBooks bill is updated (BIL-031).

- If already paid, a higher expected cost brings back an open balance, and staff record the extra payment with "+ Record payment". The bill is "Paid" again when the balance is $0.
- Every change is saved in the load's history with the user and the time.

BIL-037 Repeated carrier bill number

The system will accept the "Bill/invoice number" as typed (BIL-012). It does not stop or warn when the same number is used again for the same carrier on another load.

Bills & Invoices: invoice side

INV-001 Invoice tabs and bulk actions

The invoice-side tabs ("POD", "Send", "Outstanding", "Disputed", "Overdue") and which loads each lists are in BIL-002. On these tabs the bill column is dimmed and the invoice column bright. "Send invoices" (INV-004) appears only on the "Send" tab. "+ Record customer payment" (PAY-001) appears on every tab.

INV-002 Invoice tab counts

Counts follow BIL-003. "POD", "Send", "Outstanding" and "Overdue" show a number; "Disputed" never does. The "Overdue" invoice tab is hidden at 0 and its number is orange. The "POD" tab lists delivered loads without a POD whose customer requires one (INV-015).

INV-003 Invoice card

The card sits on the right of the row. Left: a message, the invoice number, and, when in dispute, an orange line "Disputed". Right: the customer name and an amount: the **unpaid balance** while above $0, otherwise the invoice total. A small partial-payment icon shows when some, but not all, has been paid. The first matching rule decides message and color.

#	When	Look	Message
1	The load is canceled	Dashed gray	"Canceled"
2	The invoice has been paid in full	Green	"Paid"
3	The customer requires a POD for this type of load and none is on file	Orange	"Upload POD"
4	The load is delivered and the invoice is still a draft	Orange	"Send invoice"
5	Sent, not paid, due today or later	Gray	The due text ("Due in N days", "Due today", ...)
6	Sent, not paid, due before today	Red	The due text ("Due N days ago")
7	Anything else (for example a draft on a load still in transit)	Dashed gray	"View draft invoice"

Clicking the card opens the customer invoice page (INV-006).

Bulk "Send invoices"

INV-004 "Send invoices" window

The system will open a large dark window titled "Send invoices" from the "Send" tab. It shows "Loading invoices..." while loading up to 50 invoices from the "Send" tab (on failure: "Unable to send invoices."), then one card per invoice:

Card element	Content
Heading	"BOL " (link to the shipment)
Check box	Checked by default. Screen-reader labels: "Select shipment invoice" / "Deselect shipment invoice". Unchecked cards are faded.
Due lines	"Due <Day, Mon d, yyyy>" and " days to pay". N follows INV-020; the due date is today plus N days.
Customer	Customer name (link to the customer) and the customer's billing e-mail
Preview	A thumbnail of the invoice PDF, its page count and its file name ("Invoice--from-.pdf")

- The footer button "Send selected invoices" is disabled when no card is checked.
- While sending runs, the window cannot be closed by clicking outside it. A "Close" button is always available before sending starts.

INV-005 Sending in bulk

When the user presses "Send selected invoices", the system will send the checked invoices one after the other. For each it saves the invoice date (today) and due date, then sends exactly as in INV-013. A failed invoice is tried once more; if it fails again it is reported as failed and the others continue.

- While running the window shows "Sending invoices..." and "Sent N of M".
- When finished it shows "Invoicing finished" and one result row per invoice: customer name, "BOL ", "Invoice ", a green check or red cross and, for a failure, the error in red. Each row links to the invoice. Screen-reader text: "Invoice for has been sent" or "... failed to send".
- The "Done" button closes the window.
- Sending the same invoice twice (for example after a network retry) never sends two e-mails.
- If the user closes the browser during sending, every invoice is either fully sent or untouched.

Customer invoice page

Purpose: view, regenerate or cancel the invoice PDF, send or resend it by e-mail, share it with other contacts, mark a dispute, record or remove customer payments, see the QuickBooks sync state, and upload the POD.

Reached from: an invoice card in the table; the "Invoice" tab on the bill page; the "Invoice" button on the shipment page; the "Customer Invoice" tile on the documents page; invoice cards on the customer's Invoices list; result rows after a bulk send. The close button (X) returns to the page the user came from, otherwise to the shipment.

INV-006 Invoice page layout

A full-screen dark document view with two columns, like the bill page.

- **Left column:** a tab bar (one " bill" tab with the carrier link for each bill, then "Invoice" with the customer name as a link); the shipment header (BOL, equipment, route, dates); the strip "Target cost | Profit | Price" with "Expand itemized view" (staff only, hidden while the load is only requested) where invoice lines are edited (section 4.2); the invoice PDF viewer (INV-009); the heading "Proof of Delivery" with each POD document when the load has any; and a sticky button "Upload POD" (orange, none on file) or "Upload another POD" (gray).
- **Right column (fixed while scrolling):** "Invoice " with a copy button and the QuickBooks icon; the amount; the due line; the "PAID in full" banner when paid; the dispute switch; the "Invoice sent" card; the Send / Resend button; the Share block; accounting instructions; the payments list; "Balance"; and "+ Record customer payment".
- While loading: "Loading invoice".
- Customers (portal) and carriers see a read-only version (INV-024).

INV-007 Invoice exists from booking; "+ Create invoice"

The system will create a **draft** customer invoice automatically when a load is booked. Opening the page never creates or changes anything. If a load has no invoice (for example after cancellation), the page shows "No invoice yet", "BOL does not have an invoice." and "An invoice can be created once the shipment is booked." and a button "+ Create invoice", which creates a new draft. If creation fails: "Error creating invoice". If the load already has an invoice: "The shipment already has an invoice." A load that is only requested (not booked) cannot have an invoice.

INV-008 Invoice number, lines and amount

- The **invoice number** is the load's BOL number (or the customer's own BOL number if entered). Staff can add extra reference numbers.
- The **lines** are the load's priced lines from Cost & Price (all carriers, including cancellation or TONU lines the user entered), in the same order. A line without a price is not on the invoice.
- The **total amount** equals the load's customer price. When lines change (Cost & Price block), the invoice lines and total change with them, draft or sent.
- The balance is the total minus all payments applied.

INV-009 Invoice PDF viewer

The system will show the generated invoice in a viewer with the file name "Invoice--from-.pdf", the page images, and three buttons: **download**, "Regenerate document" (circular arrows) and "Remove document" (trash; INV-010); the last two are staff only. While the PDF is prepared the viewer shows "Generating invoice"; when none exists yet, "Generate invoice".

- A **draft** PDF has a gray "DRAFT" watermark and the line "Due by: Date will be finalized when invoice is sent".
- A **sent** PDF has no watermark, shows "Invoice date" and "Due by ", and, per stop, the date and "Picked up" / "Delivered". Full layout: section 6.

- "Regenerate document" rebuilds the PDF from the current lines and dates. The PDF is rebuilt only when the user presses it, when the invoice is sent, or when a change makes it out of date; never just because someone looks at the page.

INV-010 Cancel invoice

"Remove document" (trash) asks "Are you sure you want to cancel this invoice?". Confirming cancels the invoice and returns the user to the previous page. An invoice with payments cannot be canceled: "Remove the payments first." A canceled invoice cannot be sent or paid; the page shows the "No invoice yet" state with "+ Create invoice".

INV-011 Invoice header, due line and "PAID in full"

The right column shows "Invoice " (gray label and the number with a copy button), the total, and "Due <Day, Mon d>" once a due date exists (a draft has none until sent). When at least one payment is applied and the balance is $0, a green banner reads "PAID in full on " (the date of the last payment). The "Balance" row is shown unless the invoice is canceled.

Sending an invoice

INV-012 "Send invoice" window

The big button is **"Send invoice"** (green, large) when the invoice is a draft and the load has been picked up, otherwise white outlined. After sending, the same place shows **"Resend"** (gray outlined). Both open the same window (600 px wide).

Field	Input / options	Required	Default	Rules & messages
"Invoice #"	Read-only	—	The invoice number	
"To"	Read-only list of the customer's billing e-mails. If the customer has none, an editable e-mail field (placeholder "customer email address") with the helper "Saved as the customer's billing email."	Yes	Customer's billing e-mails	"Add a billing email first" if none is entered. Addresses entered here are saved on the customer, and the window says so before sending.
"Invoice date"	Date	Yes	Today, or the saved invoice date	Changing it moves "Due" by "Days to pay". Empty: "Invoice date is required"
"Due"	Date, not before the invoice date	Yes	Invoice date plus "Days to pay"	Changing it recalculates "Days to pay". "Due date can not be before the invoice date"
"Days to pay"	Number 0–120	Yes	See INV-020	"Days to pay must be between 0 and 120"
"Message"	Multi-line text, up to 2000 characters	No	Empty	Included in the e-mail

Field	Input / options	Required	Default	Rules & messages
Buttons	**"Save & close"** (gray outline; "Saving..."): saves dates and terms without sending. **"Send invoice"** (green; "Sending..."): saves and sends.			A failure shows a red box "Error" with the message

- A yellow or gray notice shows, and "Send invoice" is disabled, while sending is blocked (INV-014, INV-015).
- No factoring switch (10-4 does not factor its own invoices).

INV-013 What sending does

When the user sends an invoice, the system will, as one action:

1. Save the invoice date, due date, "Days to pay" and message.
2. Change the invoice from Draft to open (sent). The first sending date is kept; a resend does not change it.
3. Create a secure link for the invoice (section 4.11) and e-mail it to each of the customer's billing e-mail addresses and every address in the account's "Cc invoices" list, with the invoice PDF attached. When the customer setting "Combine PDFs (bill and POD)" is on, the customer's POD file(s) are attached as separate files next to the invoice PDF (CUS-015); nothing is merged and the bill of lading is not attached. E-mail text: section 5.
4. Regenerate the invoice PDF in its sent form (no DRAFT watermark, real dates).
5. Send the invoice to QuickBooks (INV-021).
6. Add "Invoice sent" to the load's history.
7. Move the load from the "Send" tab to "Outstanding". Pressing "Send invoice" twice for the same action, or a network retry, never sends two e-mails; a deliberate "Resend" does.

INV-014 When sending is blocked

The window shows a notice and disables "Send invoice" when:

Situation	Message
The load is canceled	"This invoice can not be sent."
The load has not been picked up yet (not In transit or Delivered)	"Invoice can't be sent until the shipment has been picked up." (gray box)
The load is In transit or Delivered, the customer requires a POD for this type of load, and no POD is on file	"POD required before you can send invoice" (yellow box) with an "Upload POD" button
The invoice is canceled	"This invoice can not be sent."

INV-015 POD requirement

Each customer can require a POD before invoicing, separately for TL and LTL (customer settings, section 4.7, "POD req'd"). When it applies and no POD is on file, the invoice card says "Upload POD", the load appears on the "POD" tab and not on "Send", and the "Send invoice" window is blocked (INV-014). Uploading a POD from

the invoice page, bill page, documents page or the window's "Upload POD" button removes the block (upload steps: section 4.4). A POD can be removed with the confirmation "Are you sure you want to remove this POD?".

INV-016 "Invoice sent" card and "Resend"

After sending, the right column shows a card with a green border, a mail-check icon and "Invoice sent", the billing e-mail address (or the italic text "no billing email on file") and "Sent ". "Send invoice" is replaced by "Resend" (INV-012). The "Send" tab no longer lists the load.

INV-017 Share block

Once the invoice has been sent and has a due date, a block shows "Share invoice" (never shared) or "Shared with and N more" with the time, and a blue outlined button "Share" that opens the share window (INV-018). A draft shows no Share block.

INV-018 Share window

Staff can send the invoice's secure link to additional customer contacts. Views:

- **List**: the people it was shared with and an add button "+ Add". Empty: "Not shared with anyone yet."
- **Add**: search and choose contacts of the customer, type an optional message, "Back" and "Not now".
- **New contact**: "+ New contact" (button "Create contact").
- **Detail** of one person: the history of sends, opens and clicks, and a remove button.
- **Remove**: removes a person from the share; the link no longer works for them. Sharing is allowed only after the invoice has been sent; otherwise: "Send the invoice first". E-mail text: section 5; secure link page: section 4.11.

INV-019 Editing an invoice after it was sent

Staff can change the lines (Cost & Price block), the extra references, the invoice date, the due date and "Days to pay" after sending. The system will update the **same** invoice: lines and total change, the PDF is rebuilt, and the customer's secure link shows the latest PDF. It does not create a second invoice. To tell the customer, staff press "Resend". Payments are kept. Changing the load's customer is refused while the invoice has payments ("Remove the payments first.").

- There is no separate "void and re-issue" step in the first version (INV-025).

INV-020 Invoice terms rules

"Days to pay" (days from invoice date to due date) is taken from the first of these that is set:

1. The value typed on the invoice or in the send window.
2. The customer's own "Days to pay" (customer billing settings; Owners edit it).
3. The account's "Customer terms" (section 4.10).
4. 30 days. The due date is the invoice date plus "Days to pay". The bulk send window uses today as the invoice date. Range 0 to 120 days. Changing terms never changes invoices already sent.

INV-021 QuickBooks sync of an invoice

- When an invoice is sent (or resent), the system will send it to QuickBooks once: the customer (matched by name), invoice number, invoice date, due date, one line per invoice line, the total, the service item chosen in Settings (section 4.10), and the BOL in the memo. A resend updates the same QuickBooks invoice.
- Line changes and payments recorded in the system send nothing new.
- When QuickBooks reports a payment for an invoice the system sent, the system records it too and marks the invoice paid (PAY-024, section 7).
- The QuickBooks icon and window follow BIL-032, with "Will sync once invoice is sent" in the "Not synced yet" window. "Retry sync" for invoices makes a new attempt; "Nothing to retry." if the last attempt did not fail.
- A failed sync never blocks sending; the invoice has already been e-mailed.

INV-022 Payments on the invoice page

The right column lists each payment as "Payment received " (with its memo) and the amount, with a trash button for staff ("Are you sure you want to remove this payment?"). Clicking a row opens the payment window (PAY-010). "+ Record customer payment" is shown when the balance is above $0 and the user may record payments; green and bold when the invoice is not a draft, white outlined when it is. It opens the single-invoice payment window (PAY-007). A draft invoice can be paid.

INV-023 Accounting instructions on the invoice page

Shown as on the bill page (BIL-019).

INV-024 What customers see

Customers in the portal and people who open the secure link see the invoice PDF, the POD and the payments read-only. They cannot dispute, send, record payments, regenerate or see QuickBooks. Draft invoices are hidden from customers. See section 4.11.

INV-025 Void or re-issue a sent invoice

Two paths:

- **Correct it in place** (INV-019): change lines or dates, press "Regenerate document", then "Resend". The invoice keeps its number and the secure link shows the latest PDF.
- **Cancel and create a new one** (INV-010, INV-007): only when the invoice has no payments. "+ Create invoice" makes a new draft, which is sent again. A separate "credit and re-bill" step is planned for later.

Payments

One payment is described once here and used from several places. Customer payments are received and applied to invoices; carrier payments are made and applied to bills. A payment can be removed, and the invoice or bill returns to its earlier state.

PAY-001 "+ Record customer payment" window (several invoices)

The system will open a large window titled "Record payment" from: the header of the Bills & Invoices table, the "Record payment" button on a customer's Invoices tab and Payments tab, and the Invoices page. Opened from a customer's page, the customer is already chosen and fixed. Only users who may record payments (BIL-035) can open it.

Field	Input / options	Required	Default	Rules & messages
"Customer"	Select, placeholder "select customer". Groups: "Recent" (recently visited customers, newest first) then "All".	Yes	Pre-filled when opened from a customer	Choosing a customer loads that customer's open invoices
"Amount"	Money, placeholder "$0.00"	Yes	Empty	Must be above $0
"Payment date"	Date	Yes	Today	Not more than 90 days in the future
"Reference no."	Text, placeholder "invoice number", up to 100 characters	No	Empty	For the customer's check or transfer number
"Payment method"	ACH, Apple Pay, Credit card, Cash, Cash App, Check, Comchek, Google Pay, PayPal, T-Chek, Venmo, Wire, Zelle	Yes	None	A method must be chosen; the system never assumes one

Before a customer is chosen the lower panel shows "Select customer to see list of open invoices."

PAY-002 Open invoices panel

After a customer is chosen the lower white panel shows "Open invoices":

- A search box "Find by BOL number" (screen-reader label "Find invoice by BOL number").
- A header row: a "select all" check box ("Select all invoices" / "Unselect all invoices"), "Invoice #", "Due date", "BOL", "From To" (hidden on narrow screens), "Price".
- One row per open invoice (draft or sent, not paid): a check box (label "Select invoice "), the invoice number in bold, the due date (M/D/YYYY), the BOL, " → " and the **balance** on the right in bold. A ticked row has a blue border.
- Sorted by due date, oldest first; no due date last; ties by delivery date.
- All of the customer's open invoices are available (not only the first page).
- Empty: "No unpaid invoices found for ".

PAY-003 Applying a payment across invoices

The system will apply the amount to the ticked invoices **in the order they were ticked**. Each receives the smaller of what is left of the payment and its balance; an invoice that would receive $0 gets nothing. Money left over stays as **credit** on the payment and can be applied to other invoices later (PAY-005).

- An invoice paid in full becomes "Paid"; a partly paid one stays open with a smaller balance.
- The window shows a "Credit" line (for example "Credit +$50.00") when part of the amount is not allocated.

- Each payment is recorded once: a double press or a network retry never records it twice.

PAY-004 Footer and result of the payment window

- The submit button reads "Apply $ to selected" when invoices are ticked, "Apply $" when none is ticked, and "Apply payment" when no amount is entered. It is enabled only when the amount is above $0, a method is chosen and at least one invoice is ticked. To its right: "Selected $" (the sum of the ticked balances).
- After success the window turns white and shows a green band with a check, "Payment applied", "$X was applied to N invoice(s)", a table with "Status", "Invoice", "Due at", "BOL", "Paid", "Balance" (one row per invoice, status "Paid", "Open" or "Late"), the line "Credit +$X" if money is left over, and a "Done" button that closes the window.
- If the payment fails: "Failed to apply payment." An invoice that cannot take a payment (for example canceled) is reported as "Invoice can not be paid".

PAY-005 Apply a credit to more invoices

A payment with credit left can be applied again. The window opens in "credit" mode: the amount shows as a green box "+$" with a "Credit" badge; date, reference and method are shown but fixed. The user ticks open invoices and presses the apply button. With no credit left: "This payment has no credit left." Credit mode is reached from the payment window's "Apply to more invoices" button (PAY-010).

PAY-006 Rules for customer payments

- Money from one customer can be applied only to that customer's invoices.
- The window checks the customer is the invoice's owner; if the invoice moved to another customer while the window was open, the system asks the user to reload.
- A payment may include a draft invoice (paid before it is sent).
- Short pay: the balance stays open. Overpay: the extra stays as credit. Credit memos, write-offs and refunds are not part of the first version.

PAY-007 Record payment on one invoice (invoice page)

A smaller window (400 px) titled "Record payment" for the invoice being viewed.

Field	Input / options	Required	Default	Rules & messages
"Payment date" (hint on the right: "Due by <Day, Mon d>")	Date	Yes	Today	Not more than 90 days in the future
"Amount"	Money	Yes	The invoice balance	Cannot be more than the balance
"Method"	The 13 methods in PAY-001	Yes	None	A method must be chosen
"Memo"	Text, up to 500 characters	No	Empty	

Field	Input / options	Required	Default	Rules & messages
Button	"Save payment"			A failure shows a red box "Error saving payment"

Recorded exactly like a payment from the large window with this one invoice ticked.

PAY-008 Carrier payments

Recorded on the carrier bill page (BIL-024), one bill at a time, with the amount capped at the bill's balance. They appear in the carrier's Payments tab (PAY-013).

PAY-009 Removing a payment from one invoice or bill

The trash button on a payment row (invoice page or bill page) asks "Are you sure you want to remove this payment?". If the payment applies only to this invoice (or bill), the whole payment is deleted. If it covers several invoices, only this invoice's share is removed and that amount goes back to the payment as credit. Either way the invoice (or bill) returns from Paid to open and the balance is restored. If a bill payment covers several loads: "Remove this payment from each shipment first." Every removal is saved in the load's history.

PAY-010 Payment window

Clicking a payment row anywhere (invoice page, bill page, customer Payments tab, carrier Payments tab) opens a window with: a gray header with a "paid" icon, the title "Payment", and "$ was applied to invoice(s)" (or "bill(s)" for carrier payments); a table with "Status", "Invoice / Due" (or "Bill / Due"), "BOL", "Method", "Paid", "Balance", one row per load; and a line "Credit +$" when credit is left. Footer buttons, for users who may record payments:

- **"Delete payment"** (red outline). Asks "Are you sure you want to remove this payment for shipment(s)?". Removes the payment and its allocations; all invoices (or bills) return to open. Failure: "Unable to remove payment." / "Error removing payment".
- **"Apply to more invoices"** (green outline), only when credit is left on a customer payment. Opens credit mode (PAY-005).
- **"Done"** (gray outline).

PAY-011 Payments in the shipment history

Every payment added or removed appears in the load's history ("Customer payment added", "Customer payment removed" for invoices; the carrier payment entries for bills). See section 4.2.

PAY-012 Customer "Payments" tab

On a customer's page (section 4.7) the "Payments" tab lists every payment received from that customer, newest first.

Column	Content
"Date"	"Mon d"

Column	Content
"Amount"	Money
"Method"	A badge (for example "ACH")
"Reference"	Reference number or memo
"# of shipments"	How many loads it was applied to
"Credit"	"+$X Credit" when money is left over

A button "Record payment" (outlined, plus icon) opens PAY-001 for this customer; it works even when no invoices are open (so an advance payment can be kept as credit). Clicking a row opens the payment window (PAY-010).

PAY-013 Carrier and vendor "Payments" tab

A carrier's (or vendor's) page lists payments made to it with the same columns and payment window ("bill(s)" in the text). Page: section 4.8.

Customer Invoices page and statements

PAY-014 Invoices page

The page "Invoices" shows one customer's open invoices (draft and sent, not paid) with their aging. Reached from the customer's "Invoices" tab and by its own address. Above the list, a strip of buttons shows one customer per button (alphabetical), limited to customers with open invoices; the active one has a blue underline. With only one customer the strip is hidden. Choosing a customer reloads the list.

PAY-015 Aging bar

A bar above the list is split into five parts, each as wide as its share of the open balance:

Segment	Meaning
"Current"	Open balance not yet due (blue)
"1-15 late"	Due 1–15 days ago (orange)
"16-30 late"	Due 16–30 days ago (red)
"31-60 late"	Due 31–60 days ago (dark red)
"61+ late"	Due 61 or more days ago (darkest red)

Each segment shows its amount (bold) and label. A $0 segment is faded. Hovering for half a second shows "N invoice(s)". Days late count from the due date to today by calendar date. The bar is shown even when all amounts are $0.

PAY-016 Invoice cards on the Invoices page

One card per invoice, in this order: 61+ late, 31–60 late, 16–30 late, 1–15 late, open (not yet due), draft; inside a group by due date, oldest first. Paid invoices are not listed.

Card part	Content
Left	"BOL " (bold link); "Delivery confirmed" check (tooltip) when a POD is on file, or an orange question icon "Missing POD" (staff only); origin "City, ST" – green line – destination "City, ST"
Middle (wide screens)	Customer name (hidden on the customer's own tab); carrier name(s), the first plus "+N"
Right	An icon (partial-payment icon when some was paid); "Invoice " and the invoice date ("Mon d, yyyy"); the balance in bold; "Due <Mon d, yyyy>" with a word: "Open" (gray), "Late" (orange, red, dark red or darkest by how late), or "Draft" (gray). Hovering the due date shows a relative text ("in 3 days", "2 months ago").
Edge	A red bar on the right edge when the invoice is in dispute

Clicking a card opens the invoice page (INV-006).

- Loading: "Loading invoices...". Error: "An error occurred while loading invoices". Empty: "No invoices".

PAY-017 Footer totals

A bar under the list shows three totals: **"Not Invoiced"** (tooltip "N shipment(s)": draft invoices), **"Open"** (tooltip "N invoice(s)": sent and unpaid) and **"Late"** (red label, tooltip "N invoice(s)": sent, unpaid, past due). A $0 total is faded. On the right: the buttons "Download statement" and "Download CSV".

PAY-018 "Download CSV"

Disabled when the list is empty. Downloads "-open-invoices.csv", one row per listed invoice, with these columns:

Column
Customer
Customer Invoice Number
PO Number (the first PO reference on the origin or destination)
BOL
Origin City, Origin State, Origin Postal Code
Destination City, Destination State, Destination Postal Code
Carrier Name
Customer Invoice Total
Customer Invoice Balance Due
Customer Invoice Due Date (yyyy-mm-dd)

Column
Customer Invoice Date (yyyy-mm-dd)
Aging (Open, Late 15, Late 30, Late 60, Late 61+, or Draft)
Customer Invoice In Dispute ("YES" or empty)

PAY-019 "Download statement"

Creates a PDF statement of the customer's **sent, unpaid** invoices and balances, downloaded as "Statement--.pdf". It always reflects today's balances: an old statement is reused only when nothing changed since it was created. A spinner shows while it is prepared. Layout: section 6.

PAY-020 Send statement (customer page)

On the customer's "Invoices" tab a "Statement" card shows "Send billing contact an email with attached statement PDF." and a blue button "Send statement", shown only when the customer has open invoices. With no billing e-mail the card shows a dashed box "Add a billing email address to send a statement email." instead. The button opens a small window with a mail icon, "Email statement", "Send an email with statement to ", and buttons "Not now" and "Send email". Sending e-mails the statement PDF, saves who sent it and when, and shows "Statement email sent". On failure: "Something failed while sending the statement email." The card shows "Last sent by ". E-mail: section 5.

PAY-021 Customer "Invoices" tab

On the customer's page (section 4.7) the "Invoices" tab shows the same aging bar, invoice cards (customer column hidden), footer totals with "Download CSV", and the "Statement" card (PAY-020). A "Record payment" button (outlined, plus icon) at the top left opens PAY-001 for this customer; shown only when the customer has open invoices and the user may record payments.

Credit, aging and disputes

PAY-022 Customer credit figures

The system will calculate these figures per customer from its invoices. They appear in the footer of the Invoices page and in the credit window on the customer page (section 4.7).

Figure	How it is calculated
"Not invoiced"	The balance of invoices not yet sent (drafts)
"Open"	The balance of sent, unpaid invoices
"Current"	"Open" minus the amounts that are late
"1-15 late", "16-30 late", "31-60 late", "61+ late"	Balance of sent, unpaid invoices that are 1–15, 16–30, 31–60, 61 or more days past their due date
"Late"	The sum of the four late buckets

Figure	How it is calculated
"Unpaid"	"Not invoiced" plus "Open"
"Available credit"	The customer's credit limit (0 if none) minus "Unpaid". It can be negative.
Credit from payments	Payments with money left unapplied (PAY-003)

The credit limit and credit note are edited on the customer page (section 4.7). The figures are always shown. They stop a booking only when an Owner turns on the setting "Enforce credit limits" (section 4.10, SET-020). That setting is off at go-live, so at first the figures are for information.

PAY-023 Money display rules

Amounts are shown in US dollars with cents on cards and totals. Dates on cards and statements use "Mon d, yyyy". Sums are exact to the cent; a row total always equals the sum of its parts.

PAY-024 Paid status from QuickBooks

When QuickBooks reports a payment for an invoice or a bill the system sent, the system will mark the matching invoice or bill paid ("PAID in full on "), as if the payment had been recorded by hand.

- The payment is recorded once: a repeated report changes nothing.
- It is shown as "QuickBooks payment" with the method ACH.
- This works once the QuickBooks connection is set up (section 7). Staff can still record payments by hand (BIL-024, PAY-001).

PAY-025 Duplicate and retry protection

Recording a customer payment, a carrier payment or a booking never creates a duplicate when a request is repeated because of a slow or lost network response.

PAY-026 Disputes

Invoices and carrier bills can each be marked "In dispute" with a switch ("In dispute", then an orange pulsing "Disputed" label while on).

- The **invoice** switch is on the customer invoice page. A disputed invoice shows "Disputed" on its card, appears in the "Disputed" tab, and has a red bar on the customer's Invoices list. A failure shows a red box "Error updating invoice".
- The **bill** switch is on the carrier bill page (BIL-028). It does not change the invoice and does not use the "Disputed" tab.
- Any office user may mark or clear a dispute; it is saved in the load's history ("Invoice disputed", "Invoice undisputed").
- A paid or open invoice can be disputed; a canceled one cannot.

PAY-027 Who can do what in payments

See BIL-035. Customer payments, carrier payments, deletions and Retry sync need the "pay" right (Owner, or Members when the account does not restrict accounting actions). Sending invoices, creating and canceling invoices, disputes and POD uploads are open to every office user, as are downloading and e-mailing statements.

Late invoices board

Reached from: the "Late invoices" link on the Customers page (CUS-055), which shows the number of customers with late invoices. Breadcrumb: "Customers / Late invoices". Every Owner and Member can open it; customers and carriers cannot.

PAY-028 Late invoices board: page and header

The page shows every customer with a late balance (a sent, unpaid invoice past its due date), ranked by how much is late. Title "Late invoices". Under it, " customers" on the left and the **total late balance** on the right (it follows the rep filter, PAY-030).

- While customers load and no row is shown yet, a loading icon shows. With no late customer: "No customers with late invoice balances".
- If the data cannot be loaded the page shows an error message instead of the list.

PAY-029 Customer rows

One card per customer, in the chosen order (PAY-030). Clicking a card opens that customer's Invoices tab (section 4.7).

Part	Content
Rep	Avatar of the customer's primary rep, or of the team when the primary assignee is a team
Customer	Customer name in bold
Four aging buckets	Late balance in "1-15 late", "16-30 late", "31-60 late" and "61+ late" (days as PAY-015). A $0 bucket is left empty. A bucket with an amount is tinted orange or red and, on hover, shows its label. The bucket the list is sorted by is in solid color.
Total	The customer's total late balance in whole dollars, with a small invoice icon colored by the worst bucket that has an amount (61+ late darkest, then 31-60, 16-30, 1-15)

PAY-030 Sort and rep filter

- **Sort** (icon, tooltip "Sort"): "Total late balance" (default, largest first), "61+ days late", "31-60 days late", "16-30 days late", "1-15 days late" (each largest first), "Customer name" (A to Z) and, when the account has more than one rep, "Primary rep".
- **Rep filter**: a selector "All reps" with the avatar of the chosen rep or team. It lists each rep or team that is the primary rep of a customer with a late balance, alphabetical, and is shown only when there is more than one. Choosing a rep shows only that rep's customers, and the total changes with it.

- The chosen sort and rep stay while the user is signed in on this browser. There is no search and no paging.

PAY-031 Download the board

The download icon (tooltip "Download") saves "customers-aging.csv" with one row per customer shown, in the current order and filter. Columns: "Customer", "Rep", "Days Late 1-15", "Days Late 16-30", "Days Late 31-60", "Days Late 61+" and "Late Total". Disabled when no customer is listed.

Who can do what

Area	Owner	Member	Customer	Carrier
Bills & Invoices work area	Yes	Yes	No	No
Upload and edit bills	Yes	Yes (unless restricted)	No	No
Approve to pay, record payments	Yes	Yes (unless restricted)	No	No
Send, resend, share, cancel invoices	Yes	Yes	No	No

See accounting settings (section 4.10)	Edit	Read-only	No	No

4.6 LTL quoting

> **In short:** Staff enter a lane and freight on the "Get quotes" form and the system asks each of 10-4's own LTL carrier accounts for a rate. The results page shows every rate, lets staff set the customer price, share the quotes with the customer and book one. Booking creates the shipment and sends the pickup request to the carrier automatically. Owners connect and manage the carrier accounts on the "Carrier integrations" screen. Customers can run the same quotes themselves in the customer portal (see section 4.11).

Where the rates come from. Every LTL rate comes from a **direct connection to each of 10-4's own LTL carrier accounts**, with 10-4's own account numbers and negotiated pricing. There is no rate network in between (no Quote Factory Xtended Network, no project44). The carriers are: XPO, Saia, ArcBest / ABF, Old Dominion, AAA Cooper, Averitt, Roadrunner, Peninsula, TForce, A. Duie Pyle, Magnum, Southeastern, Go2, Pitt Ohio and Warp. An Owner can add others later (LTL-110). Which carriers are live on day one, and what each still needs from 10-4, is in section 7 (INT-018 to INT-022). A carrier not connected yet can be quoted by hand with a manual quote (LTL-052). Carriers 10-4 reached in Quote Factory only through the Xtended Network (for example Estes, R+L, Central Transport, Dayton, Dohrn, Forward Air and FedEx Freight) give no rates until 10-4 opens its own account with them. Decision for 10-4 (see the Summary, section 9): INT-022.

4.6.1 The "Get quotes" form

One lane, one pickup date, freight items and options; the system creates a quote request, asks every active carrier account for a rate and opens the results page.

How to reach it.

- The blue "Quote" button at the top of the left menu (always visible).
- The "+" next to "Quotes" in the left menu.
- The "+ quote" shortcut on a customer (the customer and contact are filled in).
- "Duplicate quote" on a results page, "Duplicate quote request" in the "..." menu of a results page, and "Duplicate quote" in the "..." menu of a shipment (the lane, items, equipment and services are copied; stop reference numbers are cleared).
- "Quote again" on any "Error loading quote request" panel.
- A quote started from a shipment (LTL-005).

Layout, top to bottom. Page title "Get quotes". A yellow banner if no carrier account is active (LTL-002). One white card with: customer row, equipment row, pickup date row, the two stops, the items, the total length row, and the blue "Get quotes" button. Footer notes under the card (LTL-019).

LTL-001 Create a quote request

The system will let staff create an LTL quote request from this form. "Get quotes" saves the request, starts the carrier rating and opens the results page; the button reads "Getting quotes..." while saving.

- A request can be made with or without a customer. Without one, the account default margin is used and a customer must be chosen before booking (LTL-073).
- If a required field is empty, the field message shows (for example "Choose a freight class").
- If saving fails, a red banner above the card reads "Error creating quote request" followed by the reason.

LTL-002 No active carrier accounts

With no active, activated carrier account, a yellow banner reads "Looks like you don't have any active carriers yet, so this quote request won't have any results." with the underlined link "Carrier settings" (opens the "Carrier integrations" screen). The "Get quotes" button is disabled while the banner shows.

LTL-003 Loading and error states

While an existing request loads the page shows a placeholder card with "Loading quote form". If the request cannot be found the page shows the panel "Error loading quote request" / "The quote request you're looking for is missing." with the button "Quote again".

LTL-004 Duplicate a request

A duplicate fills the form from the earlier request. The old pickup date is kept; if it is past, "Pickup date must not be in the past" shows until a new date is chosen. The old margin is not copied; the new request takes the customer's current margin. "Get quotes" always creates a new request.

LTL-005 Start from a customer or a shipment

The form can open with the customer and contact chosen (the customer's "+ quote" shortcut), or with the lane, stops and LTL items copied from an existing shipment (empty if the shipment is not visible to the user).

4.6.1.1 Customer row

Field	Input / options	Required	Default	Rules & messages
Customer	Search box, placeholder "select customer". Lists "Recent" customers first, then "All". Typing filters by name. The first entry is "+ add ", which opens the new-customer window.	No for staff	Empty (or set by the shortcut / duplicate)	Choosing a customer clears the contact and loads that customer's contacts.
Customer contact	Search box, placeholder "select contact". Appears only after a customer is chosen.	No	Empty	The contact receives the quote e-mail when the quotes are shared (LTL-061).

The row is hidden on the carrier-account "Test quote" form (LTL-114). Staff can also use the shell buttons "Open add new customer form" and "Create new vendor".

4.6.1.2 Equipment row

Field	Input / options	Required	Default	Rules & messages
Equipment	Search box, placeholder "select equipment". Grouped list. "LTL" is the first group. The other groups are truckload equipment (see LTL-020).	Yes	LTL	Choosing any non-LTL entry switches the form to truckload mode (LTL-020).
Protect from freezing	Switch, grey text on the right. Tooltip: "Availability is subject to carrier restrictions. Please check with the carrier to verify that they're currently providing this service."	No	Off	Adds the "protect from freezing" service to the whole request.
+ add vendor	Text button. Opens the "Add vendor" window (LTL-006).	No		Staff only. Not shown to customers.

LTL-006 **Add vendor**

The "+ add vendor" button opens a window "Vendor type" with a multi-select list: Chassis, Crane, Customs broker, Insurance, Lumper, Steamship line, Towing, Transloader, Warehouse (Freight is not offered here). The blue button "Add vendor" is disabled until at least one type is ticked. The vendors are saved on the request and carried to the shipment when it is booked. They are not used for rating. Each added vendor shows as a row ("Vendor 2:" and so on) with a trash button.

4.6.1.3 Pickup date

Field	Input / options	Required	Default	Rules & messages
Pickup date	Date box, placeholder "mm/dd/yyyy", with a calendar button ("Open calendar"). Shows as "Fri, Oct 9" when filled.	Yes	Empty	"Pickup date is required". "Pickup date must not be in the past". "Pickup date must be less than 31 days in the future". "This date is unavailable" on a weekend or a US holiday. A yellow note "This date is a holiday for some carriers" on Good Friday, the day after Thanksgiving and Christmas Eve.

LTL-007 **Pickup date rules**

The date rules above apply on the form and again when the request is saved. "Today" is the system date. The holiday note does not stop the request; it also shows as a banner on the results page (LTL-028).

4.6.1.4 Stops

An LTL request has exactly two stops: origin and destination. Each stop is a small card with an icon (circle for pickup, pin for delivery) and a collapse arrow.

Field	Input / options	Required	Default	Rules & messages
Location	Search box, placeholder "origin city/state/zip" or "destination city/state/zip". Message when empty: "start typing a city or zip code". Results are cities and zip codes plus the customer's saved addresses (address book).	Yes	Empty	Choosing a saved address also fills the company, street, hours, contact, location type and the stop services saved with that address. Message when nothing is chosen: "Choose a city, state and zip from the list".
Location type	List with 26 options: Airport, Business with dock/forklift, Business without dock/forklift, Camp, Church building, Construction site, Container freight station, Convention/trade show, Country club, Fair/amusement park, Farm, Government site, Grocery warehouse, Hospital, Hotel, Limited access, Military installation, Mine site, Native American reservation, Nursing home, Pier, Prison, Residential, School, Self-storage, Utility site.	Yes	Business with dock/forklift	The type decides which services are offered (for example a liftgate is not offered at a dock).
Pickup services (origin)	Multi-select dropdown "Pickup services": Liftgate, Inside, Single shipment, Sort & segregate.	No	None	
Delivery services (destination)	Multi-select dropdown "Delivery services": Appointment required, Liftgate, Inside, Notify before delivery, Sort & segregate.	No	None	
Collapse / expand	Arrow button "Collapse location" / "Expand location".		Collapsed on an empty form, expanded on a copied request	The location type and services stay visible while collapsed.
Clear	Trash icon in the location box.			Clears the stop.

LTL-008 **Trade show hint**

When a stop's location type is "Convention/trade show" a grey strip reads "Trade show shipments are usually freight class 125." with a "Why?" tooltip. Freight class 125 and NMFC 154630 are filled for the items.

LTL-009 **Saved addresses**

The location box also searches the customer's address book (section 4.7). The address-book button next to the origin opens the address editor to save a stop for next time.

4.6.1.5 Items (handling units)

One grey card per item, numbered, with a pallet icon. At the right of the item list: "+ add item". A trash button removes an item (only when there is more than one).

Field	Input / options	Required	Default	Rules & messages
Past-products search	Search box, placeholder "search for past things they've shipped...". Shown only if the customer has shipped before.	No	Empty	Choosing a product fills packaging, dimensions, weight, freight class and NMFC and moves the cursor to Quantity.
Packaging	List: Pallet (48×40), Pallet (48×48), Pallet (60×48), Pallet, Bag, Bale, Box, Bundle, Carpet, Carton, Case, Coil, Crate, Cylinder, Drum, Gallon, Keg, Pail, Piece, Pipe, Rack, Reel, Roll, Sack, Skid, Tote, Tube.	Yes	Empty	Choosing a pallet size fills length and width (48 x 40 and so on). Editing length and width to a standard size switches the packaging to that size; any other size switches it to "Pallet".
Quantity	Whole number, minimum 1.	Yes	Empty	
Dimensions	Three numbers "L", "W", "H" and a unit button (in / cm).	Yes	in	"Max length is 327 inches". "Max width is 100 inches". "Max height is 103 inches" (the limits are converted for cm). A live note beside the label shows volume and density, for example "213.3 cf 16.55 pcf".
Total weight	Whole number and a unit button (lb / kg). The weight is for the whole line, not per piece.	Yes	Empty / lb	
Freight class	List: 50, 55, 60, 65, 70, 77.5, 85, 92.5, 100, 110, 125, 150, 175, 200, 250, 300, 400, 500. An info icon explains the class.	Yes	Empty	A chip "Est: " appears while the class is empty. Clicking it fills the class. Tooltip: "Freight class estimate is based on dimensions and weight you have entered. It may be different from the actual class, which could result in higher carrier charges. Click to use estimate." The estimate comes from the density of one unit (13 density bands). If the class is empty when "Get quotes" is pressed the message "Choose a freight class" shows.
NMFC	Text, placeholder "optional".	No	Empty	
Stackable	Checkbox.	No	Off	
Hazmat	Checkbox.	No	Off	Only sets the hazmat flag on the request. A red hazmat marker then shows on the lane card and in quote history.

LTL-010 Totals strip

When volume or weight is entered, a line at the right of the items shows the live totals: the package count with its name (for example "Pallets 4"), "Volume", "Density" and "Weight". Mixed weight units are converted.

LTL-011 Add and remove items

"+ add item" adds a new empty item. The trash button on an item removes it, unless it is the only item.

4.6.1.6 Total length

Field	Input / options	Required	Default	Rules & messages
Length	Number, placeholder "Length", with a unit list (ft / in).	No for LTL	Empty	Used for volume (linear-foot) quotes. The limit follows the equipment.
Linear Feet Visualizer	Icon button "Linear Feet Visualizer". Opens a trailer picture with numbered feet and the footprint of each item, headed "Estimated total length 8 ft".			The "Est: " button copies the estimate into Length.
Helper text	Orange volume icon: "Enter total length for volume quotes"			Shows when the freight is large enough to qualify for a volume quote (about four pallets or more).

LTL-012 Linear-foot estimate

The system will estimate the trailer length from the items: a 96-inch wide trailer, as many items across as fit, rounded up to whole feet; Stackable is not used. The estimate never replaces what the user types.

4.6.1.7 Get quotes button and footer

LTL-019 Footer notes

Under the card the form shows grey notes with icons: "Pickup dates not guaranteed. Transit times and delivery dates are estimated." and, when a stop has "Sort & segregate": "Sort & segregate quoted price is a minimum. Final charge based on shipment and work performed."

LTL-020 Truckload mode of the same form

Choosing any equipment other than LTL switches the form to truckload (TL) mode. Staff can pick from the full equipment list: Dry Van (Dry Van, Dry Van 53, Dry Van 48, Straight Truck, Cargo Van, Dry Van or Refrigerated, Curtainside, Vented Van); Flatbed (Flatbed, Flatbed 53, Flatbed 48, Step Deck, Flatbed or Step Deck, Double Drop, Removable Gooseneck, Conestoga, Stakebed, Step Deck Conestoga, Flatbed Hot Shot, Landoll Flatbed, Multi-Axle Heavy Haul); Refrigerated (Refrigerated, Refrigerated 53, Refrigerated 48, Refrigerated Straight Truck, Refrigerated Cargo Van); Intermodal; Drayage; Dump; Dry Bulk; Power Only; Driveaway; Auto Transport; Tanker; Other.

- Carriers are not rated automatically for truckload. The request is saved empty and staff add manual quotes (LTL-050 to LTL-054).
- Items need only a description (required) and a total weight with a unit.
- Stops: origin, destination and "+ add location" for extra stops (3 to 10 stops in total, extra stops can be deleted). There is no stop services dropdown.
- Services: "Tarps" (flatbed group only), "Tanker endorsement", "Team service". The "Partial" switch shows for Dry Van, Flatbed and Refrigerated. Temperature low / high (°F) shows for refrigerated equipment. "Other name..." shows for the "Other" group.

- Total length is required when "Partial" is on or the equipment is not Driveaway or Tanker. Width and height show for Flatbed, Power Only, Auto Transport and Other. A note "Total length needed for partial quote" shows when a partial quote lacks the length.
- The pickup date may be up to 180 days ahead. A weekend date shows a yellow note "This date falls on a weekend".
- Footer note: "Pickup, transit and delivery dates are estimated."
- Customers cannot request truckload quotes; they send a shipment request instead (see section 4.11).

4.6.2 Quote results

How to reach it. After "Get quotes"; a row in quote history (4.6.5); the dashboard quote counts; a quote-request search result; e-mail links; "View quotes" in a shipment's "..." menu; "See latest quotes" on an old request.

LTL-021 Page layout

Top to bottom:

1. **Visibility bar** (staff): an eye icon and "Customer can see these quotes." (after the quotes are shared) or a crossed eye and "Customer can't see these quotes yet." (before), with the green button "Sharing" (LTL-060).
2. **Title row**: "Quotes for " (a link to the customer) and the contact name under it. At the right: the "+ Ref" button (LTL-070) and the "..." menu (LTL-071).
3. **State banners** (LTL-028).
4. **Lane card**: pickup date ("Fri, Oct 9", struck through if the date has passed), origin → destination ("City, ST ZIP"), a "Multi-stop" chip when there are more than two stops, a red hazmat marker, the total weight (for example "1,050 lb") and the mode in bold ("LTL" or "TL"). Clicking the card, or its pencil, opens the criteria editor (LTL-067).
5. **Controls row**: the eye button that hides or shows all quotes; the grouping buttons "Carrier", "Delivery", "Price"; and the tier tabs "All N", "Standard N", "Guaranteed N", "Volume N".
6. **Column headings** (staff, wide screens): a small box with the margin for all quotes and the headings "Cost", "Margin", "Profit".
7. **Quote rows**.
8. **"+ Add manual quote"** (dashed button).
9. **Footer**: the red-triangle button "N carriers didn't return results"; grey notes; and the outlined button "Duplicate quote".

LTL-022 Quotes arrive live

Rates appear as each carrier answers, without reloading. Until a carrier answers its row shows "—" and a spinner. The run normally finishes in about one minute, and then the list is final for that request.

LTL-023 Quote row

Part	What it shows
Eye icon	Visible to the customer (eye) or hidden (crossed eye, row dimmed). Staff only. Not available once a shipment is booked from the request, or when the quote has expired.
Carrier logo	The carrier's logo (or its initials). For customers who must not see carriers: the delivery weekday and date, or "?" (see LTL-027).
Title	The service type (for example "Standard", "Guaranteed by AM (Noon)") followed by " — " and the transit time: "N days", "Same day" or "Unknown delivery date". A guaranteed icon for guaranteed services. "Volume quote" with a volume icon for linear-foot rates. A yellow icon when the shipment is interlined.
Subtitle	The carrier name, then "- " (for example "Freight Economy"). "Pallet" for pallet rates, "Dimensional" for dimensional rates. A "Customer-specific rate" marker (user icon) when the rate comes from a carrier account that is not the blanket account (LTL-108).
Price	The customer price, large, grey. Staff can edit it (LTL-033). Orange when a limit warning applies, red when invalid.
"Book" button	Blue button. On narrow screens it shows the price instead. See LTL-025.
Stack arrow	"Open stacked quotes" arrow on the first row of a group that holds more quotes (LTL-024).
Cost, Margin, Profit (staff)	Three boxes at the right: cost (always read-only, grey), margin in % (up to 4 decimals) and profit in dollars.

LTL-024 Groups and stacks

Quotes are grouped by the button chosen in the controls row: "Carrier" (default), "Delivery" (grouped by estimated delivery date, with the date as a heading; "Delivery date unknown" for rates without one) or "Price" (one flat list, no stacks). Inside a group the quotes are ordered by delivery date and then by price, with removed (hidden or expired) quotes last. Groups are ordered by the price of their first row. The first row of a group shows full size and the others are stacked behind it until the arrow is clicked. If the 10-4 option "hide carrier names from customers" is on, the default grouping is "Delivery".

LTL-025 Book button states

A real "Book" button shows only on a complete quote that is not hidden or expired; otherwise an inert button of the same shape shows. The button is disabled when:

- the pickup date has passed; or the customer has a booking hold (banner LTL-028); or
- the quote has expired, or expires before the pickup date; or
- the customer does not have enough credit, **only when "Enforce credit limits" is on** (off at go-live; PAY-022, SET-020): tooltip "Insufficient credit to book this quote"; or
- the user is not an Owner and the quote margin is below the lowest allowed margin (tooltip "Margin is low on this quote.") or its profit is above the highest allowed profit (tooltip "Profit is high on this quote."); or
- the quote is a manual LTL quote (LTL-053); or
- the request was canceled. The reason shows in an orange tooltip left of the button. The same checks run again at booking (LTL-075). Staff can still book a hidden quote by opening it directly (LTL-055).

LTL-026 Tier tabs

"All N", "Standard N", "Guaranteed N", "Volume N". The counts include every complete quote (hidden ones too).

- Volume = linear-foot (volume) rates.
- Guaranteed = rates flagged guaranteed, or whose service type contains the word "guaranteed".
- Standard = everything else. The chosen tab is saved on the request, so the customer opens the quotes on the same tab staff left.

LTL-027 Hiding carrier names from customers

When the account option "Reveal carrier names" hides carriers, customers see the delivery date block instead of the carrier logo and name (POR-060). Staff always see carrier names. The carrier is still named on the BOL and shipment pages. A footer note "Carrier names hidden from customer" shows to staff. (10-4's current setting shows carrier names.)

LTL-028 State banners and messages

Situation	What the page shows
Page loading	Spinner and "Loading quote results".
Request not found	"Error loading quote request" / "The quote request you're looking for is missing." / button "Quote again".
Quotes not shared yet	The visibility bar reads "Customer can't see these quotes yet."
Customer request waiting for staff	A row "Quotes requested " / " is waiting for you to reply with quotes" (or "This customer is waiting...") with an hourglass, and the grey button "Cancel request".
No rate found	Grey box: "Your criteria didn't return any quotes." with the blue button "Edit criteria".
All quotes hidden	Orange crossed eye: "All quotes are hidden! Try unhiding at least one."
Criteria being changed	Grey note "Previous quotes are no longer accurate due to changes, new quotes will be retrieved once changes are saved."
Pickup date passed	The date on the lane card is struck through, the card gets an orange outline and the text "Pickup date has passed." with the orange button "Choose a new date". All "Book" buttons are disabled.
Holiday	"This date is a holiday for some carriers" with a calendar icon.
Customer booking hold	Banner "Booking disabled" and "Customer has a booking hold". All "Book" buttons disabled.
Cost-only test quote	Banner "Cost-only quotes" / "Don't share these with your customers" (carrier-account test only, LTL-114).
Old quotes	Orange banner "These are old quotes" / "Changes were made during or after booking." and the orange button "See latest quotes". The rows are read-only.

Situation	What the page shows
Booked	Green banner "Shipment booked from these quotes", " booked on " and the green button "View Shipment". The booked row has a green outline; rows are read-only (no margin header, no eye, no margin or price boxes).
Booking left unfinished	Orange banner "Booking left unfinished", "started on " and the orange button "Finish booking" (opens the draft shipment).
Canceled	A row "Canceled " with a red x, " made this request" for a customer request and " canceled", and the outlined button "Restore".

LTL-029 Service notes in the footer

The footer shows grey notes: an explanation for each selected service (for example protect from freezing); "Pickup dates not guaranteed. Transit times and delivery dates are estimated." (truckload: "Pickup, transit and delivery dates are estimated."); for LTL "Carriers limit their liability for damage and loss, usually in the range of $1 – $25/lb." and "Unless otherwise specified, guarantees are for delivery by 5pm."; and "Sort & segregate quoted price is a minimum..." when a stop has that service.

LTL-030 Duplicate button

The outlined button "Duplicate quote" in the footer opens the "Get quotes" form filled from this request (LTL-004).

4.6.2.1 Margins, prices and limits

LTL-031 How the price is calculated

The system will price each carrier rate from the carrier's cost and the margin (SHP-077):

- Price = cost ÷ (1 – margin ÷ 100). A 25% margin on a $100 cost gives $133.33.
- The price is never lower than cost plus the applicable **minimum profit**. If the margin gives less profit, the price is cost plus the minimum profit and the shown margin is recalculated from it.
- Cost, price, profit and margin are calculated to the cent; the margin is shown with up to 4 decimals.
- The carrier's cost can never be edited on this page.

LTL-032 Which margin applies

The margin of a new request is taken at creation and kept on the request: the account default margin (Settings > Customers; standard 25%), replaced by the customer's own margin if it has one. The **limits** (lowest margin, lowest profit, highest profit) have four levels, general to specific; a more specific value replaces a more general one, and an empty value never replaces one above it (margin and profit limits: SHP-078):

1. Account default.
2. The customer.
3. A carrier account (set under "LTL carriers" in the account margin window).
4. The customer together with one carrier account (set in the customer's own settings window, "LTL carriers" tab). Carrier account rows only add limits; they do not change the margin. The customer setting "LTL

Volume boost" (CUS-024) shows an effective margin figure but does not change quote prices in the first version. Owners set these in the account margin window (section 4.10) and the customer settings window (section 4.7).

LTL-033 Margin for all quotes

Staff set one margin for the whole request in the small box above the column headings ("Sets the margin for all quotes."): type a number and press Enter or click away. The box shows the current margin, or stays empty when margins differ ("Mixed"). On focus a list offers "Customer X%" (only if the customer has its own margin) and "Global Y%" (the account default, 25 if none); a preset applies at once. The value must be below 100; 100 or more shows the error style and is refused with "Enter a margin below 100". A spinner shows while repricing. Every automatic quote is repriced, keeping the minimum profit; manual quotes are not.

LTL-034 Margin, profit or price of one quote

Staff can edit one quote, in its own Margin, Profit or Price box (blur or Enter saves):

- Margin: the price is recalculated from the cost (no minimum profit is added on an explicit margin edit).
- Profit: the price becomes cost plus the typed profit.
- Price: the typed price is used as it is. The price must be at least $0.01. A message "Enter a price" shows for an invalid price.
- The cost box is always disabled.

LTL-035 Margin source label

Over the complete quotes the header shows where the margin comes from: "Customer" (all use the customer's margin), "Global" (all use the account margin), "Custom" (all use the margin typed for this request) or "Mixed". Prices are compared to the cent.

LTL-036 Limits for non-owners

Owners are not limited (SHP-078). For other staff, a quote with margin below the lowest allowed margin, or profit above the highest allowed profit, shows its box in orange (warning) or red (error) and its "Book" button is disabled with the tooltips in LTL-025. The rule is checked again at booking.

LTL-037 Customer-originated margins

A request made in the portal uses the customer's own margin, kept on the request; staff can still change it.

LTL-038 Price limits

A price must be between $0.01 and $1,000,000. A margin edit that would push any price past the limit is refused and nothing changes.

4.6.2.2 Hiding and duplicates

LTL-039 **Hide and show quotes**

The eye on a row hides or shows that quote for the customer (on a closed stack, the whole stack); the eye in the controls row hides or shows every quote. A hidden quote is dimmed and staff can still book it. "Show" is disabled for an expired quote.

LTL-040 **Duplicate quotes are hidden by the system**

When two visible quotes have the same service type, transit days, quote type and carrier, the system hides the more expensive one (the newer one if prices are equal). If carrier names are hidden from customers, the carrier is ignored in the comparison. Staff can show a hidden quote again.

LTL-041 **Volume duplicates**

A volume quote from a carrier that already has a class rate at the same cost is not listed.

4.6.2.3 Carriers that did not answer

LTL-042 **"N carriers didn't return results"**

The red-triangle button at the bottom, "N carriers didn't return results" (staff only, N above zero), opens a window with one row per carrier, sorted by name: logo, bold name and the red reason. N counts carriers. Typical reasons: "Carrier does not service this lane", "Destination and/or Origin are out of service area.", missing or expired credentials, "Rates and transit times are not available for the account number entered...", and "Carrier did not respond" when a carrier fails or times out. A carrier error never stops the other carriers.

4.6.2.4 Quote detail

LTL-055 **Quote detail window**

Clicking a rate row (staff, not booked) opens a two-pane window. Left pane: the carrier card (name, MC number, city and state), estimated delivery date, quote reference and "Blanket ()" or the account label or "Customer-specific rate", billing terms (for example "Third Party Prepaid"), carrier phone link and saved carrier notes, and the "Visible to customer" toggle (hides or shows the quote at once). Right pane: Cost (read-only), Margin %, Profit $ and Price (editable), the buttons "Book" and "Save", and the customer's credit status and the quote limits. "Save" saves the edited margin (if edited last) or price without booking; "Book" starts booking (4.6.3). From the carrier card on a booked shipment the window opens read-only (no "Save" or "Book") with a link "View quote results".

LTL-056 **Charge breakdown**

The window lists the carrier's charge lines (for example gross freight charge, discount, fuel surcharge, accessorial charges) with amounts that add up to the carrier cost.

4.6.2.5 Manual quotes

LTL-050 Add a manual quote

The dashed button "+ Add manual quote" opens the manual quote window for a request that already has quotes. A truckload request with no quotes shows the manual quote form directly on the page.

LTL-051 Manual quote form (truckload)

Field	Input / options	Required	Default	Rules & messages
Carrier	Search box over the account's carriers.	Yes		"Choose a carrier"
Via	Text, up to 80 characters.	No		
Quote number	Text, up to 40 characters.	No		
Quote type	List: Class, Dimensional, Guaranteed, Pallet, Spot, Standard, Volume.	Yes		
Service type	Text, up to 80 characters.	No		
Equipment	Same controls as the quote form (including "Other name...", "Partial", temperature, services).	Yes	The request's equipment	
Transit days / Delivery date	"days" number (0 to 60) and a date, linked both ways from the pickup date.	No		"Does not match the transit days" if both are given and differ.
Exp:	Expiry date.	Yes	The pickup date	
Note:	Text, up to 500 characters.	No		
Cost and price lines	One line "Freight" per vendor on the request. "+ add line" and a trash button per line. 1 to 20 lines. Each line: description (1 to 80 characters), cost and price (0 to 1,000,000, two decimals).	Yes	Price from the truckload margin (customer or account, 25 if none)	The price is cost ÷ (1 – margin), or the minimum profit rule on the total.
Buttons: "Save" and, when editing, a trash button "Delete quote". Only manual quotes can be deleted.				

LTL-052 Manual quote for an LTL request

On an LTL request the manual quote form is the shorter "house quote" form. It has no Carrier, Via, Quote number, Quote type, Service type or Note. Fields: Transit days (default 3) with Delivery date, Equipment (optional), Tanker endorsement, the lane bar (see LTL-054), the lines (Description, Target cost, Price; both required), the boxes Margin %, Cost+ % and Profit $ (they set the Freight line's price; the total target minus

the other lines), "Exp:" and the button "Save quote". A house quote is not shown to the customer and the customer e-mail does not list it. The header margin does not reprice a house quote.

LTL-053 Booking a manual LTL quote

A manual LTL quote cannot be booked in the first version: its "Book" button stays disabled with a tooltip saying so (booking a house quote is under "Planned for later", section 1.7). Manual truckload quotes can be booked (LTL-084).

LTL-054 Lane history bar

The manual quote form shows a bar "View lane history details" that opens a window with Origin, Destination, Equipment, Radius "100 mi" and History "6 months", and the line "Average cost for N mi" with "$X / $Y per mi", or "This is a new lane for you" when there is no history or data.

LTL-057 Editing manual quotes

A manual quote is edited in its own form. A manual quote with several lines cannot be repriced by the margin or price boxes on the row ("Edit this quote in its form"). The header margin applies to a multi-line truckload quote per line and then tops up the freight line to the minimum profit.

LTL-058 Changing the criteria drops quotes

Editing the criteria replaces all quotes on the request (manual quotes included), because they refer to the old lane and items. The card "Manual quotes may need updating." / "After updating this criteria, double-check the manual quotes are still accurate." shows on the edit panel while manual quotes exist.

4.6.2.6 Sharing the quotes with the customer

LTL-060 Sharing window

The green button "Sharing" opens the window headed "Shared with" (before sharing: a green button "Share quotes"). Before sharing, the caption reads "These quotes will become visible to all contacts at ." when customer login is on, and "We'll also send an email." when the request has a contact.

LTL-061 Share quotes

"Share quotes" makes the quotes visible to the customer (the request changes from draft to shared), shows them to every contact of the customer in the portal (when customer login is on), and e-mails the request's contact. If customer login is off, only the e-mailed link works.

LTL-062 After sharing

The window header reads "Visible to this 1 contact", "Visible to these N contacts", "No contacts" or "Shared with ". It lists each customer contact with a check mark when shared: name, e-mail, and when the e-mail was last sent or opened, or the grey word "Not sent". E-mail-only recipients are listed too. A failed send shows the banner "Error sharing". The link "+ Add contact" (only when customer login is on) opens an inline form with First name, Last name, Email and the blue button "Create contact". The green outlined button "Email quotes" opens the composer (LTL-063).

LTL-063 Email these quotes

The composer shows From (the user), Ref (the first reference, if any), Subject "Quotes for <origin city, ST> → <destination city, ST>", To (several addresses, "+ add email", required, filled with the contact's address), Message (default "Here are the quotes that you asked for. Let me know if you have any questions.") and the buttons "Preview" (the e-mail exactly as sent, in a frame) and the green "Send email". The e-mail holds the message, the reference and a "View quotes" button to the secure quote page (LNK-004, LNK-005); it lists no prices. One e-mail is sent per address. E-mail text: section 5.

LTL-064 Stop sharing

The red outlined button "Stop sharing" asks "Stop sharing these quotes?" / "The customer will no longer see these quotes." with the buttons "Not now" and "Stop sharing". It is available while the request is shared and not booked. The quotes disappear from the customer's pages at once, the e-mailed links stop working and the view-only link stops working.

LTL-065 Copy link (view-only link)

At the bottom of the window: "Need a view-only link?" with the small grey "(can't book quotes)" and the blue link "Copy link". It copies a link to the quote page (LNK-006): anyone with it sees the quotes without signing in but cannot book. Copying also makes an unshared request visible (view-only sharing is switched on by the copy). The address contains a private part that cannot be guessed.

LTL-066 Sharing a booked request

A request that has been booked can still be shared and its link copied; the customer then sees the quotes and a link to the shipment.

4.6.2.7 Edit, cancel, reference

LTL-067 Edit criteria

Clicking the lane card (or "Edit criteria" or "Choose a new date") opens the "Get quotes" form inside the page, with a close button ("Close editing panel") and the button "Update quotes" ("Updating quotes..."). Saving replaces the automatic quotes and rates again. Editing is not possible once a shipment exists from the request. The customer and mode cannot be changed.

LTL-068 A draft with no quotes opens the editor

A staff-made draft with no quotes and no running search opens the criteria editor.

LTL-069 Quote request status

A request is one of: draft (not shared), shared (waiting for the customer) and completed (a shipment was booked). A canceled request shows "Canceled". The history glyph (LTL-091) follows the shipment, not the status, so a booked request always shows the booked mark.

LTL-070 "+ Ref"

The "+ Ref" button turns into a text box "Ref" where the first stop's reference number (default kind "PO") can be typed; Enter or clicking away saves it. Emptying the box removes the reference. The reference shows in quote history and is carried to the shipment. Customers can set it too.

LTL-071 "..." menu

Items: "Duplicate quote request", "Cancel quote request" (only if there is no shipment and the request is not canceled) and "Uncancel quote request" (only on a canceled request). "Cancel quote request" opens the window "Are you sure you want to cancel this request?" with the buttons "No, go back" and "Yes, cancel"; on success the page goes to quote history. A canceled request refuses every change except "Uncancel" and stops a search that is still running. Uncancel does not restart the search; use "Edit criteria" for fresh rates. Test requests (LTL-114) cannot be shared, booked or given manual quotes.

4.6.3 Booking a quote

The page is the shipment booking form (section 4.2) filled from the request and the chosen quote, so staff only complete the missing details. Reached from the "Book" button of a row, the "Book" button in the quote window, or a quote link.

LTL-072 Book page

The page is headed "Book shipment" with a back arrow (to the results), a "Custom BOL #" box and a "..." menu with "Save for later" and "Cancel". A grey line reads "Quoted " with "by " at the right. While loading it shows "Loading book form". If the request or quote is missing it shows "Error loading quote request" or the banner "Quote is no longer available" with the button "Get new quotes" (back to the results).

LTL-073 What is filled in

- **Customer card**: the request's customer and contact. Staff can change them; the shipment takes the customer chosen here and the request keeps its own. If the request had no customer, one must be chosen.
- **Carrier section**: "Carrier", the link "Change carrier" (back to the results), a card with the carrier logo, the service and transit ("Standard — 7 days") and the carrier name; below it the LTL card with the "Protect from freezing" switch. The link "+ add vendor / carrier" is kept for the other vendors.
- **Locations**: the two stops from the request. The city, state and zip of both stops are locked: to change the lane, staff go back and get new quotes (message "Get new quotes to change the lane"). Items, services, dates, contacts and hours can be edited.
  - Pickup switches: "Single shipment", "Sort & segregate", "Liftgate pickup", "Inside pickup". Delivery switches: "Notify before delivery", "Sort & segregate", "Liftgate delivery", "Inside delivery", and "Appointment required" at the bottom.
  - The location type rule applies: "Business without dock/forklift" adds the liftgate service, and adding a liftgate to "Business with dock/forklift" changes the type to "Business without dock/forklift".
  - "Share BOL" is on for the pickup stop and off for the delivery stop. "Est. arrival date" shows the quote's estimated delivery date. The request's reference numbers are kept.

- **Items**: from the request, with the LTL fields, "Total value" and the linear-feet field.
- **Cost & price**: a table "Description / Cost / Price" with the line "Freight". The cost is the carrier's cost (grey, read-only). The price is the quoted price and can be edited. "+ add item" adds more lines. A summary shows "Margin", "Cost+" and "Profit".
- **Dispatching**: a card with the switch "Auto dispatch" (see LTL-080).
- The footer notes and the buttons "Book shipment" and the outlined "Save for later". Everything else on the page works as the shipment form in section 4.2.

LTL-074 Book shipment

"Book shipment" creates the shipment and books it in one step. A green message "Shipment created" and then "Shipment booked" show, the BOL e-mail is sent to the stop contacts with "Share BOL" on, and the user lands on the new shipment page. The request becomes "completed" and the results page shows the green booked banner.

LTL-075 Checks before booking

Checked again at booking, with the submitted pickup date and price:

Check	Message
Request canceled	"This quote request is canceled."
Request already booked	"This quote request is booked."
Quote not complete, or not in the request	"This quote is no longer available."
Pickup date in the past	"Pickup date must not be in the past"
Customer has a booking hold	"Booking is disabled for this customer."
Quote expired, or expires before the pickup date	"This quote expires before the pickup date."
Not enough credit (only when "Enforce credit limits" is on)	"Insufficient credit to book this quote"
Margin below the allowed margin (not Owner)	"Margin is low on this quote."
Profit above the allowed profit (not Owner)	"Profit is high on this quote."
Lane changed	"Get new quotes to change the lane"
Another person booked it at the same moment	"This quote request is booked."

Check	Message
If a check fails the form shows the red banner "Error booking shipment" with the message. The banner "Previous changes detected" with the button "Reload quote request" shows when the request changed in the background.	

LTL-076 The booked shipment

The shipment keeps its own copy of the quote: the Freight line's cost is the carrier's quoted cost whatever was submitted; the price is the price on the form; carrier, service, transit days, expected delivery date, expiry and charge lines are copied. Later cost or price edits on the shipment never change the quote request. The carrier shows on the shipment page (section 4.2).

LTL-077 Save for later

"Save for later" (in the "..." menu and as the outlined button at the bottom) saves the form as a draft shipment linked to the request, with the message "Shipment created", and opens that shipment's edit form. The request stays shared or draft, and the results page shows "Booking left unfinished" with the button "Finish booking".

LTL-078 Finish booking

"Book" on the results page of a request that already has a draft shipment does not open this page again. It attaches the chosen quote to the draft (cost and price copied from the quote) and opens the shipment's edit form. Booking the draft there ("Book shipment") completes the booking as in LTL-074.

LTL-079 Banners and states on the book page

Situation	What the page shows
Request already has a booked shipment	The page opens that shipment instead.
Request has a draft shipment	The page opens the shipment's edit form.
Request was re-quoted after booking	The page opens the latest request.
Customer has a booking hold	Card "Booking disabled" and the book button is disabled.

4.6.3.1 Pickup request to the carrier (auto-dispatch)

LTL-080 Auto dispatch

The "Dispatching" card has the switch "Auto dispatch", on by default for 10-4. When on, booking sends a pickup request to the carrier's system automatically, with the same carrier account the quote came from. It holds the BOL number, pickup date, shipper and consignee (company, address, contact name, phone, hours), the items and the services; e-mail addresses are not sent. The status moves from "booked" to "scheduled" when the carrier confirms (SHP-075).

- The shipment's carrier card shows the blue strip "Auto dispatching..." with a spinner while the request is open, and the check row "Auto dispatched" when the carrier has confirmed, with the pickup number.
- If Auto dispatch is off, no request is sent and the carrier card shows the manual dispatch bar (LTL-081).

- A pickup request is sent only once; if the answer is unclear, staff use the manual bar.

LTL-081 Manual dispatch bar

When there is no automatic pickup request, or the carrier refused it, an orange bar on the carrier card shows the carrier's contact links ("Online", phone, e-mail, when known), the boxes "Pickup #" and "PRO #" (saved when the user clicks away), the buttons "Auto dispatch" (sends the request again) and "Done" (marks the pickup as arranged by hand), and, after a refusal, the red text "Pickup request failed". After "Done" the card reads "Dispatched" and the shipment moves from "booked" to "scheduled". "Auto dispatch" is available only while the request is a draft or failed. Pickup # is saved on the pickup request; PRO # is saved on the shipment and is shown to the customer.

LTL-082 Cancel a booked LTL shipment

Canceling a shipment whose pickup request is still open (not yet confirmed) cancels the pickup request in the system. If the carrier has already confirmed the pickup, the shipment shows the orange banner "Contact the carrier to cancel the pickup!" with the text "We canceled the shipment in our system, but you need to contact the carrier and have them cancel the shipment" (with "with pickup #" when known) and the carrier's contact rows (Online, phone, e-mail), or "Unfortunately, We don't have any contact information for this carrier, but you can still mark the shipment as cancelled." The button "Carrier contacted" completes the cancel and "Undo cancel" reverses it ("Shipment un-canceled"); undo returns a canceled pickup request to draft so "Auto dispatch" is offered again. The system does not cancel the pickup at the carrier by itself.

LTL-083 LTL shipment menu

For a shipment created from a quote, the shipment's "..." menu starts with "View quotes" (opens the results page) and "Duplicate quote" (opens the "Get quotes" form filled from the request).

4.6.4 Truckload quotes and booking (short)

LTL-084 Truckload quote requests

For a truckload request the results page lists only manual quotes (LTL-051). The margin box writes the truckload margin. Booking a truckload quote opens the same book page filled with the quote's stops, items, equipment and **all** of its cost and price lines. The cost on each line comes from the quote and cannot be changed; prices can be edited. There is no automatic pickup request for truckload: the shipment is covered as usual (see section 4.3). Customers do not book truckload quotes.

4.6.5 Quote history and "Shipments to quote"

Browse and search every quote request, newest first. Reached from "Quotes" in the left menu (the "+" starts a new quote); the "Quote" queue row (staff, only when it has a count) opens "Shipments to quote".

LTL-090 Quotes list

The page "Quotes" lists quote requests newest first, 16 rows first and more as you scroll. Each row is a card that links to the results page of that request (row label "Visit quote results for ").

Cell	Content
Status glyph	See LTL-091.
Pickup date	"Oct 9" in bold with the weekday (or the year when not in the current period). Struck through and grey if the date has passed and the request is not booked, or if it is canceled.
Lane	Origin "City, ST" → destination "City, ST".
Customer	Customer name (empty for requests without a customer).
Weight	For example "2,050 lb", with a red hazmat icon first when hazmat.
Sub-line	For a customer request: when it was created. The BOL number in orange when a shipment exists but is not booked; in plain text when booked. Otherwise the first reference, for example "PO 12345".
Mode	"LTL" or the equipment name.

Row borders: orange 1 px for requests that need action (a customer request waiting for quotes or with an unfinished booking); dashed grey on a grey background for expired and canceled requests; solid grey otherwise.

LTL-091 Status glyph

The glyph is the first of these that applies:

1. Expired (the pickup day is past and the request is not booked): grey expired mark, date struck through.
2. A customer request that was shared and is waiting for the customer: person with a green envelope.
3. Booked (a booked shipment exists): green check.
4. Canceled: grey x.
5. A customer request that is a draft and waiting for staff: person with an orange rotating hourglass (action needed).
6. Pickup in the future and a draft shipment exists: orange "finish booking" mark.
7. Otherwise: small grey box (a draft or shared quote made by staff). For customers the glyphs read "waiting for broker to respond" and "quotes available".

LTL-092 Search and filters

A search box (placeholder "search for...", opens with the magnifier, after a short pause) and a funnel button that opens a filter panel with "Customer" (one customer) and "Rep" (one user or one team). Chosen filters show as blue chips with an x. Search words are combined (all must match) and match the customer name, origin or destination city, state or zip, the first reference value, and the BOL or custom BOL number of the linked shipment. Search and filters are remembered for the session. The scroll position is restored when returning from a results page.

LTL-093 Empty states

"No quote requests." or `No quote requests for "<search>".`, and the button "Reset filters" when a search or filter is active.

LTL-094 Shipments to quote

The page "Shipments to quote" lists customer-made requests that staff must still answer: draft, not canceled, made by a customer. It has no filter box, shows the oldest request first, and empty text "No quote requests.". The "Quote" row in the left menu counts these requests and is hidden when the count is zero.

LTL-095 Customer quote history

On a customer's page the "Quotes" tab lists that customer's requests with the same rows. Empty: "No quotes" with the button "+ quote".

LTL-096 Dashboard

The dashboard quote counts come from the same list (see section 4.1, Dashboard).

4.6.6 LTL carrier accounts ("Carrier integrations")

Connect 10-4's own LTL carrier accounts so the system can retrieve negotiated rates, send pickup requests and track loads. Owners manage the accounts; other staff can look. Reached from Settings > Carriers > "Carrier Integrations" (breadcrumb Settings / Carriers / Carrier Integrations; a close X at the top right returns to the previous page).

4.6.6.1 The list of carriers

LTL-100 Carrier cards

One square card per carrier: logo, name in grey, and coloured dots at the top left (one per account: green "Activated", yellow "Activating", red "Error", grey any other state). Cards are A to Z; a carrier with no account switched on appears faded at the end. A card links to the carrier page.

- Above the cards (Owner): the blue button "+ Add carrier".
- At the right: the outlined link "Test quote" (shown only when at least one carrier is activated).
- Heading "Future carrier integrations" with smaller cards for carriers that cannot be connected yet.
- Empty account: grey block "Let's activate your first carrier." with "+ Add carrier" (Owner), or "No carriers setup... yet." (others).

LTL-101 Carrier status

A carrier card is "Activated" if any account is on and activated; "Activating" if none is activated but one is activating; otherwise "Deactivated". An account's own state is "Activating" (saved, waiting to be switched on at the carrier), "Activated", "Error", or "Deactivated" when its On/Off switch is off. An activating account can take up to 24 hours.

4.6.6.2 One carrier

LTL-102 Carrier page

The page shows a back arrow, the logo (a click opens the carrier details: SCAC, USDOT, MC numbers, legal name, addresses, compliance), the carrier name, and one row per account. A row shows the status dot and the account number (or the state word "Activating" / "Activated" / "Error" when there is no number yet), and below it "Blanket" (bold) followed by " - " when the account has a label. Owners can click a row to edit the account; others see a plain row. Accounts are listed active first, then blanket first, then oldest first. If 10-4 cannot be connected to the carrier, the page says: "We are not currently integrated with , but adding your account information will allow you to add manual LTL quotes."

LTL-103 "+ add rates"

The Owner link "+ add rates" opens the form for a new account of that carrier (LTL-105).

LTL-104 Notes

Below the accounts: the title "Notes" and the caption "Add notes and reminders on this carrier for your team". Owners can write notes (with visibility control); other staff see the notes read-only.

4.6.6.3 Add or change an account

LTL-105 Credentials form

Field	Input	Required	Rules & messages
Extra connection details	One text box per detail the carrier needs (for example "Access Key" for Go2).	Yes	The box labels follow the carrier.
Account number	Text. Label "Account number" (or the carrier's own wording).	Yes	Shown when the carrier needs an account number. "Each integration per carrier must have a unique account number."
Portal username	Text. Label "Username" (or the carrier's wording, for example "Email Address").	Yes	Shown for carriers that connect directly.
Portal password	Password box, at least 4 characters. Never filled in. Label "Password".	Yes	
Button	"Authorize" (carrier connected by the system) or "Save" (carrier not connected). Disabled until the form is changed and valid.		

Field	Input	Required	Rules & messages
Consent text under the button: "By clicking this button, you authorize us to work with to retrieve your rates on your behalf." (or, when the carrier is not connected, "We are not currently integrated with , but adding your account information will allow you to add manual LTL quotes."). Errors show in red: "Something went wrong".			

LTL-106 Credentials are write-only

The system will keep the username, password and extra details private: they are never shown again and never in e-mails. Screens show only the account number.

LTL-107 After saving

For a connected carrier a yellow card (clock icon) reads "We're activating . It can take 24 hours, but it's usually faster." and "We'll notify you when they're ready." with the button "OK". The account state is "Activating" until the carrier answers, then "Activated" or "Error". A carrier may also show its own extra instruction, for example which access key or other connection detail 10-4 must send to it (the box labels of LTL-105 follow the carrier; see section 7 for what each carrier needs). Other carriers go straight back to the list.

4.6.6.4 Edit one account

LTL-108 Edit account screen

Five stacked cards:

1. **Status**: the dot and account number, an On/Off switch, and the label row ("Blanket - ", with a pencil, or the blue link "+ add label"). The pencil opens a small window with the field "Label" (placeholder "+ add label") and the button "Save label". Switching the account Off keeps it but stops it giving rates on **new** quotes; quotes already on a request stay.
2. **Credentials**: the pencil opens the credentials form. If the account is activated, a warning comes first: "Warning" / "Changing credentials on an active carrier could take up to 24 hours to take effect. During that time you will not be able to run quotes on this carrier." with the buttons "Change credentials" and "Nevermind".
3. **Billing address**: shown with "(default)" in faint text when the account's own billing address is used. The pencil edits it; the trash button resets it to the default.
4. **Blanket**: the switch "Use for all customers (Blanket)". Below, when on: "Show rates to all customers except those listed below:" (the word "except" in red italics); when off: "Only the customers listed below will see these rates:". The list shows each customer (link to the customer) with a trash button ("Remove exception"), and the link "+ add a customer" opens a customer picker. An account that is not blanket, or has customers listed, is a **customer-specific** account. Its rates show on the results page with the "Customer-specific rate" marker.

LTL-109 Which accounts rate a request

An account gives rates on a new request when it is On, "Activated", its carrier is connected, and: for a blanket account the request's customer is not in its exception list; for a non-blanket account the request's customer is in its list. A request with no customer uses blanket accounts only. The list of accounts is fixed when the request starts rating; switching an account off affects the next request only.

4.6.6.5 Add carrier window (Owner)

LTL-110 Add carrier

The button "+ Add carrier" opens a window (stages below).

Stage	What it shows
Choose	Label "Select a carrier", a search box (placeholder "search"), the list of carriers not on the account (logo and name), the text "No carrier matches" and the link "Can't find your carrier?".
Connected carrier	Back arrow, logo, "Enter account info for " and the credentials form (LTL-105).
Carrier not connected yet	Choosing it registers 10-4's interest and goes straight to the last stage.
Request a carrier	Label "Which carrier are you looking for?", a search box, and when more than 2 characters are typed the blue button `Request "<text>"` and "OR select a match below" with a filtered list.
Done	The logo, a message, the buttons "Done" and "Add another carrier".
Messages: for a connected carrier the activation text of LTL-107; for a carrier not connected yet "We're not integrated with yet, but they're on our roadmap." and "You just moved them a little higher on the list, and we'll notify you when they're ready."; for a requested carrier "Thanks for requesting . We'll look into supporting this carrier, and notify you if they become available to use."	

4.6.6.6 Test quote

LTL-114 Test quote

The link "Test quote" opens "Run a test quote": the "Get quotes" form without the customer row, with the margin set to 0 and LTL only. It rates with the active accounts and opens "Test quote results" with the outlined button "Done testing" (back to the carrier list), the banner "Cost-only quotes" / "Don't share these with your customers", and the rows showing cost as price. A test quote cannot be shared, booked, edited into a normal quote or given manual quotes, and does not appear in quote history, counts or the dashboard. States:

"Loading quote request"; "Error loading quote request" / "The quote request you're looking for is missing." with the link "Start new quote request".

4.6.6.7 Margins and limits per carrier account

LTL-115 Account margin window

In Settings > Customers the tile "Margin defaults and limits" ("Set default margins for customers and minimum margin/profit") opens the window "Margins and limits" with the tabs "Global" and "LTL carriers". "Global" holds "Default LTL gross margin", "Minimum LTL gross margin", "Minimum LTL gross profit" and "Maximum LTL gross profit" (and the same for TL). The tab "LTL carriers" lists each carrier account with its logo, name and label or number, and the same four boxes for that account. Each box saves when the user clicks away (snackbar " saved" with "undo"); an empty box or one equal to the inherited value removes the override. Owner only. See section 4.10.

LTL-116 Customer LTL carriers tab

In a customer's settings window (section 4.7) the tab "LTL carriers" shows the same boxes for that customer and each carrier account. A carrier account whose rates are not shown to that customer (LTL-109) is shown as "Rates hidden from customer". Any staff member can change a customer-and-account value; only an Owner can change a carrier-account value that applies to every customer.

LTL-117 Reveal carrier names

In Settings > Customers the tile "Reveal carrier names" (switch "Hide Carrier Names": "Don't show the carrier logo and name when sharing LTL quotes. (will still show on BOL and shipment details)") sets LTL-027. The tile reads "Carrier names are visible" when off.

Who can do what

Action	Owner	Member	Customer
Run a quote, edit criteria, duplicate, cancel / restore	Yes	Yes	Own requests only (section 4.11)
See cost, margin, profit	Yes	Yes	No (price only)
Change the margin for all quotes or one quote	Yes, unlimited	Yes, within the limits (LTL-036)	No
Hide and show quotes, set the tab, add manual quotes	Yes	Yes	No
Share, stop sharing, copy link, e-mail quotes	Yes	Yes	No
Book a quote and send the pickup request	Yes	Yes (within limits)	Yes, own quotes after sharing (section 4.11)
Quote history and "Shipments to quote"	Yes	Yes	Own requests
View the carrier accounts and notes	Yes	Yes (read only)	No

Action	Owner	Member	Customer
Add or change carrier accounts, credentials, blanket / exceptions, notes	Yes	No	No
Run a test quote	Yes	Yes	No
Margins and limits for carrier accounts (everyone)	Yes	No (read only)	No
Margins and limits for a customer and one carrier account	Yes	Yes	No

4.7 Customers

> **In short:** This part of the system keeps every customer of 10-4 in one place: who they are, who owns the account (reps and commission), how they are billed, how much credit they have, what margin they get, who can log in, their saved pickup and delivery addresses, and their full history of quotes, shipments, invoices and payments. Owners and Members use it every day. Owners control the money-related fields (credit, days to pay, margins below the account minimum, commissions, merge, archive).

Customers list

Where: the sidebar item "Customers". The page shows every customer that is not archived.

CUS-001 Customers list page

The page title is "Customers" followed by a gray count "(N of M)": N customers match the current search and filter, M is the total. Next to the title is a round plus button "Add a new customer". Below the title, on the right, are the "Customer login" button and the export button.

- Each customer is one row; the whole row opens that customer's page. Rows show a blue ring on hover.
- The whole list loads at once; there are no pages.
- With no sort chosen, customers are listed alphabetically by name, ignoring case. Names that start with a number come first.
- The add buttons (title plus and sidebar plus) are hidden for Members when the company option "Adding customers option" is on (ROL-022). Owners always see them.

CUS-002 Customer row

Column	What it shows
Customer	Customer name in bold. Under it, in gray, the full name of the primary contact (empty if none). Text that matches your search is highlighted.
Booked	Number of shipments booked, then the date of the last booking as "MMM d" (year added when not the current year). Cells stay empty for a customer that has never booked or quoted. A customer with zero bookings shows "0".
Quoted	Number of quote requests, then the date of the last quote request, same format.
Credit	"No credit" with a gauge icon when no credit limit is set. "Prepay" with a credit-card icon when the credit limit is $0. Otherwise the credit limit in whole dollars with a gauge icon. Hidden on narrow screens.
Rep	Avatar (colored circle with initials) of the primary rep, or of the team when the primary assignee is a team.

- "Booked" counts shipments that were booked and not canceled. Drafts do not count.
- There is no "Late" column in the first version (see section 1.7).

CUS-003 Sort the list

Click a column heading to sort; click again to reverse. An arrow shows the active column and direction.

Heading	Sorts by	First click
Customer	Name	A to Z
Primary contact	Primary contact full name	A to Z
Booked	Number of bookings	Highest first
last (next to Booked)	Date of last booking	Newest first
Quoted	Number of quote requests	Highest first
last (next to Quoted)	Date of last quote request	Newest first
Credit	Credit limit (no credit counts as 0)	Highest first
Rep	Name of the primary rep or team	A to Z

- The chosen sort is remembered while the user stays signed in on this browser.

CUS-004 Search

The filter box at the top right of the title bar opens a window with a search field (placeholder "search for...") and a "Rep" selector. Typing finds customers whose name or primary contact first or last name contains the text, ignoring case. The window closes on Enter or on the button "See N customers". The search text shows in the filter box; clicking a filter chip clears that filter.

CUS-005 Filter by rep

In the same window, the field "Rep" (placeholder "select a team or user") lists the account's users and teams, each with an avatar.

- A user shows customers where that user is a rep, or where a team the user belongs to is a rep.
- A team shows customers where that team is a rep.
- Search and rep filter stay in the page address and are remembered, so Back returns to the same filtered list.
- "Reset filters" clears both.

CUS-006 Export customers

The download icon next to "Customer login" opens a small box with "Export these customers to a .CSV file." and a button "Export", disabled when no customer matches the filter.

- The file holds the customers matching the current search and rep filter.
- Columns: Name, Website, Phone, Description, Primary Contact, Primary Contact Email, Primary Contact Phone, Shipments, Last Shipment Date, Last Note Date.
- Available to every signed-in 10-4 user (not to customers).

- On failure the page shows "Something went wrong".

CUS-007 Customer login link

The button "Customer login" (key icon, blue caption "Copy link" on hover; tooltip "Copy customer login link") copies the customer sign-in link (POR-005). It is hidden when customer login is turned off in the account settings (section 4.10).

CUS-008 Add customer window

Opened from the title plus or the sidebar plus ("Open add new customer form"), over the current page.

Field	Input	Required	Rules & messages
Customer name	Text, label "Customer name"	Yes	3 or more characters show the "Did you mean?" list (CUS-009). An empty name creates nothing.

- Button "Add customer" (full width, blue) creates the customer with only a name and opens its page, where all other details are filled in.
- Enter with no matching customers in the list also creates the customer.
- On a problem the window shows the reasons (or "Something went wrong!").
- Nothing is e-mailed when a customer is created.

CUS-009 Did you mean? check

After 3 characters (short pause after typing) the window shows the heading "Did you mean?" with existing customers whose names are close. Clicking one opens that customer instead of creating a new one. The list is hidden while empty.

CUS-010 Empty and loading states

State	What is shown
Loading	A centered spinner.
No customers yet	"Let's add your first customer." and a blue button "Add customer". Members see nothing when the "Adding customers option" is on.
Search or filter finds nothing	"No matches found" and a button "Reset filters".

Customer page

Where: a row in the list, a customer name anywhere in the system, or a result in "Find anything".

CUS-011 Page layout

Top to bottom:

1. **Breadcrumb bar:** "Customers" (link back to the list), then the customer name. On the right: the "Documents" button, the "Reps" button (avatars of the assigned reps, star on the primary rep) and, for Owners only, a "..." menu with "Merge customer" and "Archive customer".
2. **Archived banner** (archived customer only): "This customer has been archived". Owners also see "Restore customer"; Members see the text only.
3. **Header:** customer name (large) with a pencil button "Edit customer details", then vendor number, website and phone, a one-line description, and on the right the logo box. Empty items appear as blue prompts: "+ vendor number", "+ website", "+ phone", "+ description".
4. **Tabs:** Overview, Shipments, Quotes, Addresses, Invoices, Payments. The Invoices tab shows a red icon when the customer has overdue invoices (CUS-041). A tab can be opened directly from its link.
5. **Tab content.**

- Header values: the website opens in a new tab, the phone is a click-to-call link, the description is limited to two lines and opens fully on hover.
- Until the data arrives the header is empty.

CUS-012 Overview layout

Three columns on wide screens, stacked on narrow ones.

- Left: Credit card, Accounting, Contacts, Booking & quoting, External references (only when the account has reference types).
- Middle: Active shipments.
- Right: note box, notes, accounting instructions and the Timeline.

General details

CUS-013 Edit customer details window

Opened by the pencil next to the name or any "+" prompt in the header. Titled "General" (building icon), blue "Done" button at the bottom. There is no Save button: each text field saves when left (only if changed); switches and selects save at once. After each save a green message " saved" appears with an "undo" button. A failing field shows an error under it; any other failure shows a red message "Something went wrong!" that stays until closed.

Field	Input / options	Required	Default	Rules & messages
Customer name	Text, placeholder "Customer name"	Yes	Current name	Editable by Owners always; by Members unless the account enforces credit limits and the customer has a credit limit above $0. Kept exactly as typed. Message: "Name saved".
Vendor number	Text, placeholder "12345"	No	Empty	The customer's number for 10-4 in the customer's own system.
Phone	US phone field with flag	No	Empty	US phone mask. A "Call" button next to it (title "Dial ") starts a call.

Field	Input / options	Required	Default	Rules & messages
Website	Text, placeholder "website"	No	Empty	A "Visit" button opens the site in a new tab and adds "https://" if missing.
About	Multi-line text, placeholder "add description"	No	Empty	Saved as "Description".

CUS-014 Company logo

The logo box shows the logo with a pencil button to change it and a trash button to remove it. Without a logo it shows a dashed box "+ logo". Users pick an image file from their computer. The logo appears on the customer page and wherever the system shows the customer's logo.

CUS-015 Accounting card and Edit billing window

The Accounting card on the Overview (heading "Accounting") shows: the legal name if set; the billing address (company shown when it differs from the customer name) or "no address on file"; billing e-mails, one per line; billing phone; the tax ID with its type, for example "EIN 12-3456789"; "DUNS" and the number; three small facts: " day terms", "LTL" or "TL" "POD req'd", and whether "Combine PDFs (bill and POD)" is on or off. Copy icons next to address, e-mails, phone, tax ID and DUNS copy the text. Clicking the card opens the window "Accounting" (circled dollar icon, blue "Done" button), which saves like the General window (CUS-013).

Field	Input / options	Required	Default	Rules & messages
Billing address	Button showing the address, or "+ billing address". Opens the address window (company, street lines, city, state, zip, country USA/Canada/Mexico).	No	Company = customer name, country USA	City, state and zip are required in the address window. Error shown in a banner.
+ Legal name	Blue link that reveals the field	No	Hidden when a legal name exists	
Legal name	Text, placeholder "Acme Corp, LLC"	No	Empty	
Billing email	Several e-mails as chips; typing suggests this customer's contacts' e-mails; placeholder "+ billing email"	No	Empty	Invoices and statements are sent to these e-mails.
Billing phone	US phone, placeholder "(000) 000-0000"	No	Empty	
Tax ID	Type select (EIN, TIN, RFC) and a text field, placeholder "Tax ID"	No	Type follows the billing country: Canada TIN, Mexico RFC, otherwise EIN	Saved only when a type is set.

Field	Input / options	Required	Default	Rules & messages
DUNS number	Fixed prefix "DUNS" and a text field, placeholder "000000000"	No	Empty	Must be 9 digits. Message: "Invalid DUNS number. DUNS numbers are 9 digits."
LTL POD required	Switch	No	Off	When on, invoices for the customer's LTL shipments cannot be sent until a proof of delivery is on file (section 4.5).
TL POD required	Switch	No	Off	Same for Truckload.
Combine PDFs (bill and POD)	Switch	No	Off	When on, the customer's POD file(s) are attached to the invoice e-mail next to the invoice PDF, as separate files. When off, only the invoice PDF is attached. Nothing is merged into one PDF, and the bill of lading is not attached (DOC-012).
Days to pay	Whole number 0 to 120	No	The account's customer payment terms (30 days at first)	Owner can edit; Members see the number only. Saved on leave.

- Billing details (address, e-mails, phone, tax ID, DUNS, legal name) are editable by Owners always, and by Members unless the account enforces credit limits.
- A viewer who cannot edit sees a read-only summary with copy buttons instead of fields.

CUS-016 Accounting instructions

In the right column an Owner sees "+ Accounting instructions" and can write a plain-text instruction for whoever does billing (for example how to send invoices), with buttons "Save" and the edit pencil ("Edit note"). Members see the saved text under the heading "Accounting instructions" but cannot change it. Stored and shown as plain text; links and formatting are not interpreted.

Contacts

CUS-017 Contacts card

Heading "Contacts", the first 3 contacts (name in bold capitals, then the title, or the e-mail if no title) and, with more than 3, the total count. A round plus button adds a contact. With no contacts the card is dashed and shows "+ Add contact". Clicking the card opens the contacts window.

CUS-018 Contacts window

A wide window with two panes. Left: the contact list (name and title or e-mail, selected one darker) and an outlined blue button "+ contact" at the bottom. Right: the selected contact.

- **View:** name and title, a star with the tooltip "Primary contact" on the first contact, a trash button (tooltip "Delete contact", confirmation "Are you sure you want to delete this contact?") and a pencil (tooltip "Edit contact"). Below: phone, e-mail and web rows, whose icons start a call ("Start call"), open the site ("View site") or copy ("Click to copy "). Then the "External references" card (when the account has reference types) and a dashed "+ note" box for notes about this contact.
- **Order and primary contact:** the first contact is the primary contact (the first contact added becomes primary). The list shows a position number before each name. Users drag a contact to a new position or use "Move up" and "Move down"; position 1 becomes primary.
- **Deleted contacts** are hidden from the list and can be restored.
- **No customer login on a contact:** login is controlled per customer (CUS-026), not per contact. | Field (create / edit form) | Input / options | Required | Default | Rules & messages | |---|---|---|---|---| | First name | Text | Yes | Empty | | | Last name | Text | No | Empty | | | Title | Text | No | Empty | Examples: "SHIPPING COORDINATOR", "ACCOUNTING". | | Details | A growing list; each row is one box "Phone, email or URL". The system recognises the type: contains @ = e-mail, contains :// or a web address = web, looks like a number = phone. | No | One empty row; a new empty row appears when the last is filled | Phone rows have a type: mobile, office, home, fax (default mobile). A trash button removes a row. |
- Buttons: "Cancel" and "Create" (new) or "Update" (edit).
- Messages: "Error creating contact", "Error updating contact", "Error deleting contact" followed by the reason.

Reps and commission

CUS-019 Reps window

The "Reps" button opens a window titled "Reps assigned".

- Banner: "Changes will only be applied to new shipments; existing shipments will not be affected."
- Search box "+ add user or team": typing lists matching users (by full name) and teams (by name). Already assigned ones are disabled. A user who is on no assigned rep or team also gets "+ Add yourself to this team".
- Column headings: "User" and "Commissions".
- Each row: a drag handle, the avatar and full name (click opens a small profile), the star on the primary rep, the commission control (Owner only) and, for Owners, a trash button "Remove commission for ". Team rows work the same way.
- Drag rows to reorder; position 1 becomes the primary rep. The first rep added is primary.
- A rep or team cannot be added twice. Only users and teams of this account can be added.
- Messages: "Updated reps." and "Failed to change assigned reps."

CUS-020 Commission per rep

Owners set a commission for each rep or team on the customer: a select with "%" or "$" and a number.

- "%" (percent): 0 to 100, one decimal. Placeholder "0".
- "$" (flat fee): dollar amount. Placeholder "$".
- Saved when the field is left or the select changes.

- Members see the values read only. The commission feeds the Commissions report (section 4.9).

CUS-021 Commission notes

Owners see a notes box under the rep list for notes about commission on this customer. Members cannot see or write them.

Margins

CUS-022 Margin rules

Every quote gets a price from the carrier cost and a margin. Margins come from two levels, most specific first:

1. the margin set for this customer,
2. the account default margin (Settings, section 4.10).

- A value not set on this customer shows the inherited value in gray with a dashed border. A value set on this customer has a solid border and a small circular-arrow button (tooltip "Reset default LTL gross margin" and similar) that removes it and returns to the inherited value. Typing a value equal to the inherited one also returns to inheriting.
- The price rule is SHP-077 (cost divided by (1 minus the margin), never less than the cost plus the minimum gross profit); margin and profit limits are SHP-078.
- Margins apply to quotes created after the change.

CUS-023 Margin grid (Settings window, tab "Customer-specific")

Opened by the "Booking & quoting" card (or "Open settings" in the Booking disabled banner). The window is titled "Settings" (gear icon), has two tabs, "Customer-specific" and "LTL carriers", and a blue "Done" button.

Row	Column "Default" ("Start here")	"Min gross margin %" / "Min%" ("Don't go below")	"Min gross profit $" / "Min$" ("Don't go below")	"Max gross profit $" / "Max$" ("Don't go above")
LTL	Default LTL gross margin, %	Minimum LTL gross margin	Minimum LTL gross profit	Maximum LTL gross profit
Truckload	Default truckload gross margin, %	Minimum truckload gross margin	Minimum truckload gross profit	Maximum truckload gross profit

- Default margins accept up to 99.99 percent. Inputs show one decimal; the Overview shows the exact stored value. Limits are shown in dollars.
- Success message " saved" with "undo". Labels: "TL Margin", "LTL Margin", "TL gross margin minimum", "TL gross profit minimum", "TL gross profit maximum", "LTL gross margin minimum", "LTL gross profit minimum", "LTL gross profit maximum".
- Owners are not limited by the account minimums ("Owners aren't limited by these amounts." shows for Owners).
- Members cannot enter a value below the account-wide minimum for margin or minimum profit; the system refuses it on every save, not only on screen.

- Quotes outside a customer's limits cannot be booked by Members (section 4.6).

CUS-024 LTL Volume boost

Below the grid is an orange-tinted row "LTL Volume boost" with an orange badge showing the effective LTL margin (the customer's default LTL margin times the boost), a reset arrow and a select (placeholder "select volume boost"). Options: "Not boosted", "x1.25 Small boost", "x1.5 Medium boost", "x2 Max boost". Default "Not boosted".

- The boost multiplies the customer's default LTL margin; the badge shows the result.
- The setting is saved and shown, but quote prices follow the margin rules in CUS-022; the boost does not change the price of an LTL quote.

CUS-025 LTL carriers tab

One block per LTL carrier account of 10-4 (section 4.6): carrier logo and name, the account label or number, and four inputs in the same columns as CUS-023 (tooltips such as "Default gross margin for rates"). Values here set the margin and profit limits for that carrier; they do not change the quote price (LTL-032). When the carrier's rates are hidden from this customer, the block shows "Rates hidden from customer" with a crossed-out eye and empty cells. Without LTL carrier accounts the tab shows "No LTL carriers connected."

Booking and quoting settings

CUS-026 Booking & quoting card and switches

The card "Booking & quoting" shows a green or gray dot (booking on or off) and the rows "LTL margin %", "TL margin %" (customer value, else account default, else 0), "Customer login", "Auto-quoting", "Auto-dispatching", each with a green or gray dot (Auto-quoting and Auto-dispatching are dimmed when off). Clicking the card opens the Settings window. At the bottom of the Customer-specific tab, a gray block has four switches:

Switch	What it does	Default	Who can change
Enable booking	When off, the customer cannot be booked on: the Overview shows the red banner "Booking disabled" and the Book button is disabled in quote results.	On	Owner
Customer login	Allows this customer's contacts to sign in to the customer portal.	On	Owner and Members
Auto-quoting (LTL)	The customer gets LTL quotes automatically in the portal. Indented under Customer login.	On	Owner and Members
Auto-dispatching (LTL)	LTL shipments the customer books are sent to the carrier for pickup automatically (section 4.6). Indented.	On	Owner and Members

- When customer login, auto-quoting or auto-dispatching is off for the whole account (section 4.10), a warning icon appears next to that switch with "Customer login is disabled in account settings." (or

"Customer auto-quoting is disabled in account settings." or "Customer auto-dispatching is disabled in account settings.") and "You can still change this, but it won't have an effect until enabled by an owner of your account."

CUS-027 Booking disabled banner

When booking is off, the Active shipments column shows a red banner "Booking disabled". Owners see the link "Open settings"; others see "Contact rep for more info".

Credit

CUS-028 Credit card

The figures (PAY-022) are always shown. They can stop a booking only when an Owner turns on "Enforce credit limits" (SET-020); it is **off at go-live**, so at first the card is information only.

State	Card
No credit limit set	Orange card, gauge icon, title "No credit" and orange button "+ Get credit".
Credit limit of $0	Card with a credit-card icon and the title "Prepay" (the customer pays before shipping); the same word is used in the customers list (CUS-002) and CUS-030.
Credit requested, waiting	Blue pulsing "No credit" with "Waiting".
Credit limit set	Card with a used-and-left bar and "<$> left" or "<$> over".
Quote price above remaining credit	Orange "Credit too low to book", "<$> left" and the bar. Only when "Enforce credit limits" is on (a booking above the available credit is then refused; section 4.6).

- When a credit note exists it is shown under the card with the tooltip "Note from credit department". Owners see "+ credit note" when there is none.
- Clicking the card opens the credit window (CUS-029).

CUS-029 Credit and aging window

- **Usage view (everyone):** "Limit <$>" and "<$> left", a stacked bar, and the lines "Open" (link "View open invoices for customer"), "Current", "1-15 days late", "16-30 days late", "31-60 days late", "61+ days late", "Not invoiced" and "Remaining", each with a "View invoices" link to the Invoices tab. "Terms days" and "DTP " (average days to pay) are shown with a chart of the last 12 months (blue line = days to pay, red area where it is above the terms, dashed line = terms) and a link "View payments". A "Toggle detailed breakdown" arrow collapses the list. Button "Done".
- **Alert (only when "Enforce credit limits" is on):** red "Credit limit reached" with "Pay off current balance or request an increase in credit to continue booking shipments." when the credit is used up, or orange "Credit too low to book".
- **Owners** also see the credit limit editor (CUS-030) and credit note editor (CUS-031).
- **Members** see the credit note read-only and a button "Request credit" once credit-request addresses are set (SET-025), which opens an e-mail to the credit-request addresses set in the account settings, subject

"More credit for ", body: "What new credit limit are you requesting? / What's the nature of their business? / What do they ship? / What's driving this request?"
- With "Enforce credit limits" off (go-live), booking is never blocked by credit.

CUS-030 Credit limit (Owner)

The row "Credit limit" with a pencil ("Edit credit limit"). Editing shows a dollar field (whole dollars, minimum 0, steps of 1,000) and buttons "Cancel" and "Update". A limit of 0 means the customer pays before shipping and shows as "Prepay" everywhere. Message: "Credit limit saved" with "undo". Errors appear in a banner. Credit changes are shown in the timeline.

CUS-031 Credit note (Owner)

"+ credit note" (tooltip "Add note for rep") opens a text box with placeholder "Add a message about customer's credit..." and buttons "Cancel" and "Save" (Enter saves, Shift+Enter adds a line). A trash button "Clear message" removes it. Saved text has "Edit message" and "Delete message". Message: "Credit message saved" with "undo". Reps see the note read-only.

Documents

CUS-032 Documents window

The "Documents" button (icon changes when the customer has documents) opens a full-screen dark window titled "Documents" with the customer name at the top right and an X to close. Documents are page thumbnails with names, grouped by document type (group heading hidden when there is only one group). The last tile is a dashed "+ add file" tile for uploading. Users can open and remove a document. Typical documents: W-9, credit application, contracts. The customer's statement PDF also appears here.

Notes and timeline

CUS-033 Notes

A dashed box "+ note" in the right column. Typing and leaving the box saves a note, with an undo message. Notes are listed newest first with author and time. The author or an Owner can edit or delete a note.

CUS-034 Timeline

A collapsed row "Timeline" (arrow). Opening it shows the customer's history, newest first, with date, time and user: customer details updated, statement sent, credit limit updated, credit note updated, booking turned on or off, documents added or removed, reps changed, commission changed, contacts created, changed or deleted. Reps and commission events are shown to Owners only.

CUS-035 External references

When the account has external reference types (Settings, section 4.10), the Overview shows an "External references" card with rows " " (long values cut off), or the prompt "+ Add external reference". Clicking it opens a window with an information note, rows with a type select and a value box, a remove button on each row, and "+ reference". Rows save when the field is left. A type already used on this customer cannot be

chosen twice. A value shows as a link when the type has a web link template. The card is hidden when the account has no reference types. Members cannot add or change reference types, only values. Also available on contacts (CUS-018) and address templates (CUS-047).

Shipments, quotes, invoices and payments

CUS-036 Active shipments column

Header "Active shipments" with a spinner while loading. Two blue/outlined buttons: "+ Quote" (quote form with this customer selected) and "+ Shipment" (new shipment with this customer selected). The list shows booked loads that are scheduled or in transit, in groups "Scheduled" and "In transit". Each card shows BOL number, status, pickup and delivery date and time, origin and destination city and state, mode or equipment and carrier; a clock icon marks a late or flagged load. A card opens the shipment. With none: a dashed link "+ shipment".

CUS-037 Shipments tab

A scrolling list of all the customer's shipments, newest created first. Each row looks like a row of the Shipments list (section 4.2): BOL number with a status stripe, pickup date and time, customer name and price, origin and destination with a distance bar, delivery date, mode and weight, carrier and cost, or "N leads" when no carrier is chosen yet. A row opens the shipment. More rows load on scroll; the scroll position is remembered. Empty: "No shipments" and a link "+ shipment".

CUS-038 Quotes tab

A scrolling list of the customer's quote requests. Each row shows the date, an icon (green check when booked, struck-through calendar when not), origin and destination, the customer name, the BOL number of the booked shipment, and the weight and mode. A row opens the quote results (section 4.6). Empty: "No quotes" and a link "+ quote".

CUS-039 Invoices tab

Shows the customer's invoices with an aging bar and the statement; the content is PAY-021 (aging bar and cards PAY-015 and PAY-016, footer totals PAY-017, "Download CSV" PAY-018, "Record payment" button at the top left, shown when the customer has open invoices and the user may record payments). The "Statement" card on the right (only when there are open invoices) has the text "Send billing contact an email with attached statement PDF.", the button "Send statement" (PAY-020), "Last sent by ", the button "Download statement" (PAY-019) and a preview of the statement. A card opens that shipment's invoice.

CUS-040 Payments tab

The customer's received payments, newest first; columns and the "Record payment" button are in PAY-012 ("Date", "Amount", "Method", "Reference", "# of shipments", "Credit"). Date shows as "MMM d". A payment with an unused balance shows a green "Credit" pill with "+$ amount". Clicking a payment opens the payment details (PAY-010). More payments load on scroll.

CUS-041 Invoice alert

The Invoices tab shows a red icon when the customer has overdue invoices.

CUS-055 Link to the Late invoices board

Near the title, the Customers page shows a "Late invoices" link with the number of customers that have a late balance, when at least one has. It opens the "Late invoices" board (PAY-028 to PAY-031); a card on the board opens that customer's Invoices tab.

Address book (Addresses tab)

CUS-042 Addresses tab

The customer's saved pickup and delivery locations ("address templates"). A search box (placeholder "find address...") and a round plus button sit at the top. Below, a scrolling list of cards sorted by company name A to Z; typing (short pause) filters the list; more cards load on scroll. Empty: "No address book entries".

- Templates normally appear by themselves when a shipment is booked with a new address. Users can also add them here.
- The same templates fill the company field when building a quote or shipment for this customer (sections 4.2 and 4.6).
- Editing a template does not change shipments that already used it.

CUS-043 Address card

Left: company name in bold with a small tag for "pickup" and/or "delivery" (set automatically), then street and "City, ST ZIP". Right: the location contact name (or a department word such as "SHIPPING"), the hours "8:00am — 5:00pm" and, with special instructions, "Note: ". Clicking a card opens the Edit template window.

CUS-044 Create and Edit template window

A wide window with the form on the left and a light-blue "Private note" column on the right. Title "Create template" or "Edit template" (address-book icon).

Field	Input / options	Required	Default	Rules & messages
Company name	Text	Yes	Empty	
Location type	Select. Options: Airport, Business with dock/forklift, Business without dock/forklift, Camp, Church building, Construction site, Container freight station, Convention/trade show, Country club, Fair/amusement park, Farm, Government site, Grocery warehouse, Hospital, Hotel, Limited access, Military installation, Mine site, Native American reservation, Nursing home, Pier, Prison, Residential, School, Self-storage, Utility site	Yes	Business with dock/forklift	Shown left of the "LTL Services" menu.

Field	Input / options	Required	Default	Rules & messages
LTL Services	Menu with two groups of checkboxes. Pickup: Liftgate, Inside, Single shipment, Sort & segregate. Delivery: Appointment required, Liftgate, Inside, Notify before delivery, Sort & segregate.	No	Nothing selected	Dashed when empty. Shows a summary of the first two choices and the count. These services pre-fill LTL quotes for this address.
Address	Street address with suggestions	Yes	Empty	A suggestion fills street, city, state, zip, county, country and time zone.
+ Address 2	Link that reveals "Address 2 (optional)"	No	Hidden	A trash button removes it.
Neighborhood	Select	No	Hidden	Only when the country is Mexico.
City, state, zip	Search box with suggestions	Yes	From the address	
Location contact	Text	No	Empty	
Contact phone	US phone, placeholder "(000) 000-0000"	No	Empty	
Contact email (send BOL email to)	Several e-mails as chips, placeholder "add email"; suggests this customer's contacts	No	Empty	These addresses receive the bill of lading e-mail for shipments at this location.
Special instructions	Multi-line, placeholder "optional"	No	Empty	
Open time	Time	Yes	8:00 AM	
Close time	Time	Yes	5:00 PM	When earlier than open, the form shows "Note: Closes next day ()".
Private note	Multi-line, placeholder "private note for your team", label "visible by your team only"	No	Empty	Never shown to the customer or the carrier.

- Buttons: "Create" or "Save" (blue pill, bottom right). On Edit: a trash icon at the bottom left asking "Are you sure you want to delete this template?".
- After delete, "Location template deleted" appears with an "undo" button that brings it back.
- If saving fails, the error shows above the footer buttons.

CUS-045 Create template

The plus button opens "Create template" with the defaults above. "Create" saves and refreshes the list.

CUS-046 Edit template

Opens with values filled in. The e-mail shows as a chip with a trash icon. "Save" closes the window.

CUS-047 Template external references

In Edit, the card "External references" with "+ Add external reference" appears when the account has reference types (CUS-035).

CUS-048 Address book access

The address list on the customer page is available to 10-4 users. How customers pick saved addresses in the portal: section 4.11.

Other customer functions

CUS-049 Customer external references

See CUS-035.

CUS-050 Merge customers (Owner)

The menu "..." > "Merge customer" opens "Merge customers" with the text "Transfer contacts, quotes, shipments, and notes from *source* customer to *target* customer." Fields: "Source customer" (customer picker, placeholder "select customer", required, cannot be the current customer) and "Target customer" (fixed, the customer you are on).

- Warnings: "The source customer will be deleted. This cannot be undone." and "Some of the target's details like name, billing address, and settings will not be merged."
- Buttons: "Cancel" and "Merge".
- The system moves contacts, address templates, shipments, quotes, invoices, payments, documents and notes, and the source's timeline history, to the target. The source's reps are not added (the target keeps its own reps), and shipments booked by those reps keep the rep who booked them. The source's margins are discarded. Then the source customer is deleted.
- A customer cannot be merged into itself.

CUS-051 Archive customer (Owner)

The menu "..." > "Archive customer" opens "Archive customer" with the subtitle "Hide from customer lists", and a warning "Continue at your own risk": "Archiving will remove this customer from your Customers list. Likewise, you will not be able to select them for future quotes or shipments." "Customer will not be deleted" "You will still be able to access this customer's detail through your shipment history." Buttons "Cancel" and "Archive". Afterwards the system returns to the Customers list. The menu item is hidden on an archived customer.

CUS-052 Restore customer (Owner)

An archived customer's page shows the banner "This customer has been archived" and, for Owners, "Restore customer", which puts the customer back in the Customers list.

Rules for who sees a customer

CUS-053 Everyone on the team sees every customer

In the first version every Owner and Member sees every customer, including those assigned to other reps. The Owner setting "Customer visibility" (section 4.10) can be switched on and is saved, but it is not enforced; restricting a customer to its assigned reps is planned for later.

CUS-054 Owner-only actions are enforced

The system enforces every Owner-only action in this section every time, not only by hiding buttons. A Member who tries one gets a "not allowed" answer.

Who can do what

Action	Owner	Member	Customer
See the list, open a customer, search, export	Yes	Yes	No (customers use the portal)
Add a customer	Yes	Yes, unless the "Adding customers option" is on	No
Edit general details, contacts, notes, address templates, documents	Yes	Yes	No
Edit name and billing details	Yes	Yes, unless the account enforces credit limits	No
Days to pay, accounting instructions	Yes	Read only	No
Credit limit and credit note	Yes	Read only; can request more credit	No
Enable or disable booking	Yes	Read only	No
Customer login, auto-quoting, auto-dispatching switches	Yes	Yes	No
Margins and limits	Any value	Not below the account minimums	No
Reps (add, remove, reorder)	Yes	Yes	No
Commission and commission notes	Yes	Read only (notes hidden)	No
Merge, archive, restore	Yes	No	No

4.8 Carriers and vendors

> **In short:** This part of the system keeps 10-4's list of freight carriers and of other vendors (towing, crane, warehouse and so on). For a carrier it shows the government (FMCSA) identity and safety data, tells you whether the carrier may be used (Approved, Candidate or Don't use), holds the carrier's insurance packet, contacts, payment terms and tax details, and lists the loads and payments for that carrier. Owners decide who is approved. Members can look up, add and edit most things.

Carriers and vendors list

Where: the sidebar item "Carriers". The plus button next to it ("Create new vendor") opens the add window.

CAR-001 List page

The title is "Carriers / Vendors" followed by a gray count "(N of M)": N records match the search and filters, M is the total for the current tab. Next to the count is a round plus button that opens the add window (CAR-008). On the right is the filter box.

- Three tabs under the title: "Carriers", "Vendors", "All". "Carriers" is selected when coming from the sidebar.
- Records are white cards, 10 at a time as you scroll. The list keeps the scroll position on return.
- Order is by name, A to Z, ignoring case. There is no sort control.
- A card opens the carrier or vendor profile and shows a blue ring on hover.
- The page works the same for every 10-4 user.

CAR-002 Carrier card

Part	What it shows
Status dot	A small circle: green = approved, red = don't use, gray = candidate. Hovering shows the reason, for example "Not in-service" or "Haven't worked with this carrier before". Calculated from the carrier's current government data and your own decision (CAR-014).
Name	The carrier's name in bold.
Details	"USDOT ", "MC-" (first MC number) and ", " of the physical address (hidden on narrow screens).
Right side	When a shipment is waiting for this carrier to be approved: an hourglass and "Requested" when a packet was requested, or a green document icon and "Packet completed" when the carrier returned the packet.

CAR-003 Vendor card

Part	What it shows
Icon	By the first vendor type: carrier, insurance (umbrella), lumper (hand truck), steamship line (ship), towing (tow truck), transloader (forklift), customs broker, chassis, crane, warehouse. A vendor without a type uses the carrier icon.
Name	The vendor name in bold.
Details	The vendor type (for example "Towing") and, when a billing address exists, ", ".

CAR-004 All tab

Shows carriers and vendors together, each with its own card layout, sorted by name.

CAR-005 Search and filter window

Clicking the filter box (tooltip "View carrier filters") opens a window:

Field	Input / options	Default	Rules
Search	Text with a magnifier, placeholder "search for..."	Empty	Finds name, MC or USDOT number. Enter closes the window.
Added date	Eight buttons: "Today", "Yesterday", "This week", "Last week", "This month", "Last month", "This year", "Last year", or a custom start and end date	None	The week starts on Sunday. Dates follow the browser time zone.
1099 Required	Checkbox "Requires 1099"	Off	Shows only records that require a 1099.

- Active filters appear as chips in the filter box: "Created this month" (or "Created M/d-M/d") and "Requires 1099"; the x removes one.
- The footer button reads "See N carriers / vendor" (singular for 1) or "See N carriers / vendors" and closes the window.
- Filters and search stay in the page address and are remembered while navigating.

CAR-006 Empty states

State	What is shown
No carriers found	"No carriers found" (Carriers tab) or "No vendors found" (Vendors and All tabs), followed by `for "<search>"` when a search is set, and a blue button "Reset filters".
Loading	Gray placeholder cards.
Problem loading	"Something went wrong." and a blue button "Try again".

CAR-007 Approve & review carriers

The Carriers list has a second view, titled "Approve & review carriers" (the view "Approve"), which staff open from the Carriers list. It lists only carriers that have a shipment waiting for approval. A sidebar row "Approve carriers" with a count is not part of the first version (see section 1.7).

- A search box (placeholder "search for...", short pause before searching; finds name, MC or USDOT) and a filter icon.
- Cards show the name, "USDOT", "MC-", city and state, the status dot, and the strip "Requested" or "Packet completed", with an orange border. A card opens the carrier profile.
- When nothing is waiting: a pale-blue panel with "No carriers." and a button "Reset filters". The title has no counter.
- Approving the carrier (CAR-015) releases the waiting rate confirmations (section 4.3).

Adding a carrier

CAR-008 "What do you want to add?" window

Opened by either plus button. A small window with two dashed tiles; hovering turns the border blue. Escape or a click outside closes it.

Tile	Caption	Opens
Carrier	"Freight carrier with MC or DOT number"	The carrier lookup (CAR-009)
Vendor	"Providers such as crane, insurance, warehouse, etc."	The vendor type step (VND-001)

CAR-009 Carrier lookup

A small window with one field labelled "Carrier MC or DOT #".

- Typing (short pause) searches the government FMCSA directory by MC number, DOT number or name, showing up to 16 results under "Select carrier to add", each looking like a carrier card (dot, name, USDOT, MC, city and state).
- No match: "No carriers found for
  ".
- Clicking a result closes the window and opens that carrier's profile. The lookup itself creates nothing.
- If the carrier is not yet on 10-4's list, the profile shows the "Add to your list" card (CAR-010).

CAR-010 Add to your list

On the profile of a carrier not yet on 10-4's list, the right side shows a dashed orange card titled "Add to your list" with "Before you can add contacts, notes, or carrier packet info, we first need to add to your carrier list." and an orange button "Add carrier".

- "Add carrier" saves the carrier with the status "Candidate" ("Haven't worked with this carrier before").
- If the carrier is already on the list (for example another user just added it), the existing record opens. Nothing is duplicated.

- If saving fails: "Error adding carrier".
- The left cards (status, FMCSA) stay visible with the government data.
- Only the Overview is shown until the carrier is added; the Shipments and Payments tabs appear after.

CAR-011 Government (FMCSA) data

The system keeps a searchable copy of the government's FMCSA carrier data (census, authority, safety rating and insurance on file); carriers are found by name, MC number or USDOT number.

- Refreshed regularly (every night for carriers with open loads or packets, and when a carrier is opened and its data is older than 24 hours). The profile shows "Updated ".
- When the government source cannot be reached, the profile shows the last known data with its date. Covering a load is blocked only when the last known data says the carrier is not allowed (CAR-014).
- Data per carrier: USDOT number, MC numbers, freight forwarder (FF) numbers, Mexican (MX) numbers, SCAC code, legal name, doing-business-as name, friendly name, tax ID, physical, mailing and billing addresses, phone, e-mail, website; authority (carrier, broker, freight forwarder; authorized or not; in service or out of service; interstate or intrastate); safety rating with date; insurance on file (BI/PD, bond, cargo); trucks and drivers; inspections and crashes.

Carrier profile

Where: a carrier card, the carrier link on a shipment, the lookup, or "Find anything".

CAR-012 Page layout

1. **Breadcrumb:** carrier icon, link "Carriers" (back to the Carriers tab), carrier name (hidden on narrow screens), and the "Documents" button on the right.
2. **Header:** the carrier name (large), then identifiers: SCAC (if any), "USDOT ", "MC-" for each MC number, "FF-", "MX-", and an outlined badge "INTRASTATE" for carriers operating only within one state. Below, a delivery icon and the city and state as a link to a map; a website link if known. LTL carriers show their logo on the right.
3. **Tabs:** "Overview", "Shipments", "Payments".
4. **Content.** The Overview has a left column of cards and a right area.

CAR-013 Overview, left column

In order: Status card, Packet card, FMCSA card, monitoring links (CAR-036), Contacts card, "Send payments to", "Payment terms", "Tax & entity", "Support" (LTL carriers), "Accounting integration", "External references".

CAR-014 How the status is decided

The status card shows "Approved", "Candidate" or "Don't use", with a colored dot and a reason on hover. The first matching rule wins:

#	Condition	Status	Reason shown	Can an Owner change it?
1	No FMCSA record found	Candidate	"Unknown carrier"	No
2	The carrier is out of service	Don't use	"Not in-service"	No
3	The carrier is not authorized (does not apply to carriers that operate only within one state)	Don't use	"Not authorized"	No
4	The carrier has no carrier, broker or freight forwarder authority (not for intrastate carriers)	Don't use	"No carrier, broker, or freight forwarder authority"	No
5	Safety rating is "unsatisfactory"	Don't use	"Safety rating unsatisfactory"	No
6	The carrier is not yet on 10-4's list	Candidate	"Add carrier to your account first"	No
7	The carrier packet has expired (CAR-020)	Keeps the status that was set	"Insurance expired"	To "Don't use" or "Candidate" only
8	Otherwise: the status an Owner set	"Don't use" shows "Don't use this carrier"; "Approved" shows "Manually approved"; "Candidate" shows "Haven't worked with this carrier before"		Any of the three

- A new carrier starts as "Candidate".
- A carrier can be red on the list although an Owner approved it earlier, because the government data now says it is out of service or not authorized.
- A "Conditional" safety rating does not block a carrier; it is shown in the FMCSA card and warns the user at cover (section 4.3).

CAR-015 Change status (Owner)

For Owners, when more than one status is allowed, the status card is a button with a down arrow that opens a panel of the allowed statuses (dot and label; the current one has a thick colored bar on its left edge). Choosing one saves it and refreshes the card. Members see plain text.

- When a carrier changes from Candidate to Approved, all rate confirmations waiting for this carrier's approval are sent (section 4.3).
- Every status change is recorded in the timeline with the user.

CAR-016 Pending approval banner

At the top of the right area, when shipments are waiting for approval: an orange-bordered line "This rate con will be sent when this carrier is approved" (plural when several). When the packet expired: "Looks like this carrier's insurance expired on ".

CAR-017 FMCSA card

A card with a clickable header: a green check and "FMCSA Authorized" (in service and authorized) or a red mark and "FMCSA Not authorized". Below:

Row	Right-hand text
Safety	The rating ("Satisfactory" green, "Conditional" yellow, "Unsatisfactory" red) or "Unrated"
Insurance	The kinds on file: "BI/PD", "Bond", "Cargo" separated by commas
Trucks	Number of power units, or "-"
Drivers	Number of drivers, or "-"
Clicking the card opens the FMCSA window (CAR-018).	

CAR-018 FMCSA window

A wide window. Header: carrier name, SCAC, USDOT, MC, MX and FF numbers, FMCSA icon. Sub-header: legal name (or " dba "), phones, e-mail, and two address columns "HQ" and "Mailing" (only when different).

- Authority card: green "AUTHORIZED", or red "NOT AUTHORIZED" or "OUT-OF-SERVICE" with the out-of-service date, the operation type ("Interstate", "Intrastate", "Intrastate Non-Hazmat"), the cargo types (household goods, passengers, property) and the safety rating line with its date.
- "Trucks" and "Drivers" counts.
- "Insurance" card: "BI/PD", "CARGO", "BOND" amounts in dollars ("-" when none) and a button "L&I" that opens the FMCSA Licensing & Insurance page.
- "Inspections/Crashes" card: counts for "VEHICLE", "DRIVER", "HAZMAT", "CRASHES" and a button "Safer" that opens the SAFER company snapshot.
- Footer: "Updated " and a button "View on FMCSA".

CAR-019 Packet card

Shows the carrier packet (insurance and documents the carrier gives 10-4). The whole card opens the packet window (CAR-021).

State	When	Card shows
Not requested	No packet	Missing-document icon, "Packet not requested" and an outlined blue button "Send request".
Requested	Request sent, carrier has not answered	Rotating hourglass, "Document request sent", "Sent to " (time on hover) and a link "Resend".
Completed	Carrier returned the packet	Green document icon, "Carrier docs" and "Exp. ", then rows "Gen Commercial", "Auto", "Cargo" with the insurance amounts in whole dollars (or "-").

State	When	Card shows
Expired	Completed packet whose earliest expiry date has passed	Orange document icon, the same rows, an orange footer "Insurance expired!" and a link "Update".

CAR-020 Packet expiry

A packet counts as expired the day after its "Earliest expiration date". The system works this out; nobody sets it by hand. An expired packet changes the status rule (CAR-014 #7) and shows the banner in CAR-016.

CAR-021 Packet window

Opened from the packet card. Header: carrier name and the SCAC / USDOT / MC row, with a "Documents" button. Body: the insurance form.

Field	Input	Required	Default	Rules
General Commercial Liability	Dollars, hint "each occurrence"	Yes	$0	Whole dollars, 0 or more
Automobile Liability	Dollars, hint "combined single limit"	Yes	$0	Whole dollars, 0 or more
Motor Truck Cargo	Dollars	Yes	$0	Whole dollars, 0 or more
Earliest expiration date	Date	Yes	Empty	Not before today

- Button "Save" (blue, full width). A saved packet is marked completed. A failure shows "Saving insurance information" followed by the reason.
- Footer: the status text ("Updated " or "Request sent to " and the time) and the link "Request new packet".
- Users can fill the form from an insurance certificate the carrier e-mailed, or the carrier fills it in on the secure page (CAR-022).

CAR-022 Request carrier packet

Opened by "Send request", "Resend" or "Request new packet". A small window titled "Request carrier packet" with "Ask to upload their latest carrier packet. This will send them an email". A contact picker lists the carrier's contacts that have an e-mail address; a new contact can be added there. Button "Send request".

- The system e-mails the chosen contact a secure link (section 5). The packet card changes to "Document request sent".
- On the secure page the carrier confirms its company details, uploads documents (authority, insurance certificate, W-9, factoring letter if any), fills in the insurance form and sees a thank-you (section 4.11).
- When the carrier finishes, the packet card shows "Carrier docs", the files appear under "Documents", and the page updates without reloading.
- The same request can be made from the cover screen when covering a load with a Candidate carrier (section 4.3).

CAR-023 Contacts card

Same behaviour as the customer contacts card (CUS-017, CUS-018). Heading "Contacts"; the first 3 contacts show the name in bold and the first e-mail; with none: a dashed card "+ Add contact". A round plus adds a contact. The contacts window has the same list, view, edit, order, delete and restore functions.

- Carrier contacts are kept for 10-4 only; other brokers never see them.
- Use the title to mark a contact as dispatcher, accounting and so on (for example "DISPATCH", "ACCOUNTING"). The cover screen lists carrier contacts when picking a dispatcher (section 4.3).
- A contact has no customer-login switch; carriers do not sign in.

CAR-024 Documents window

The "Documents" button (icon changes when carrier packet documents exist) opens the same full-screen dark window as for customers (CUS-032) with the carrier name, USDOT and MC at the right. Only carrier packet documents are listed, newest first. Users can upload more files, open a file and remove it (with a confirmation).

CAR-025 Send payments to

Shows "Send payments to" with the address payments go to and the payment contact: the carrier's saved remit-to address, or the billing address in the government record. Hidden when neither exists. Read only here. Where one bill is paid is changed on the carrier bill (BIL-012, BIL-013), including choosing a factoring company (CAR-037). A change of payee or remit-to address is saved without a second check (CAR-039).

CAR-026 Payment terms

Shows "Payment terms" and " days from <Vendor bill | Pickup | Delivery>". The default comes from the account setting for carrier payment terms (30 days from Vendor bill at first, section 4.10). The block is clickable for Owners only (tooltip "Edit payment terms") and opens the window "When adding a bill for this vendor...".

Field	Input / options	Default	Rules
Set Bill date to	Three tiles: "Vendor bill date", "Pickup date", "Delivery date"	Account default	
Pay within	Whole number of days, then "days"	Account default	0 to 120

- Footer note: "Default terms are <Vendor bill / Pickup / Delivery> + days".
- Button "Save". Error: "Failed to save payment terms."
- The terms set the due date of carrier bills (BIL-015, BIL-033).

CAR-027 Tax & entity

Shows "Tax & entity", the tax ID with its type from the government record (for example "EIN"), the legal entity type and a pill "Needs 1099" when 1099 is required, or a blue link "+ Add legal entity type". Clickable for Owners only (tooltip "Edit tax related info"); opens a window:

Field	Input / options	Default	Rules
Business ID	Read-only with a lock icon, " "	From the government record	Shown when known
Legal entity type	Select: "Unknown", "Corporation", "LLC as corporation", "LLC as partnership", "LLC as sole proprietorship", "Partnership", "Sole proprietorship"	Unknown	
Requires 1099	Switch	Set from the type	Corporation and LLC as corporation = off; the other four = on. Can then be changed.

- Button "Update". Error: "Failed to save vendor info."

CAR-028 Support block (LTL carriers)

For LTL carriers with a support phone and e-mail on file, a "Support" block with a click-to-call phone and an e-mail link.

CAR-029 Accounting integration

When the account's accounting system takes carrier bills (QuickBooks Online), the block "Accounting integration" shows "Push bills to " with a green dot (on) or gray dot (off, row dimmed). Clicking it (tooltip "Edit accounting integration settings") opens "Accounting Integration Settings" with one switch "Push bills to ", which saves at once with "Push bills on" or "Push bills off" and "undo". When off, approved bills for this carrier are not sent to the accounting system (BIL-031). Default on. Members can change it.

CAR-030 Active shipments and notes (right area)

- "Active shipments": cards of the carrier's loads that are scheduled or in transit, grouped "Scheduled" and "In transit" (like CUS-036). With none: "No active shipments".
- Note box "+ note" (dashed) and the notes list newest first, with author and time. Notes can be edited and deleted by their author or an Owner.
- "Timeline" (collapsed row): the history of the carrier and its contacts, with who and when: status changes, packet events, term changes and contact events.
- "External references": rows " " or "+ Add external reference" when the account has reference types (CUS-035).

CAR-031 Shipments tab

A left list of all shipments the carrier covered, newest pickup first. Rows look like rows of the Shipments list (BOL number with a status stripe, pickup, customer, origin and destination, delivery date, carrier cost). A row with a bill still being processed shows a rotating hourglass. Right: note box and notes. Empty: "No shipments".

CAR-032 Payments tab

Payments 10-4 made to the carrier, newest first. Columns: "Date", "Amount", "Method", "Reference", "# of shipments", "Credit" (PAY-012, PAY-013). Date shows as "MMM d" and adds the year when not the current

year. Method shows the payment method and, on a second line, the memo if any. "# of shipments" shows "-" for none. A green "Credit" pill with "+$ amount" marks an unused balance. A payment opens its details (PAY-010). There is no "Record payment" button here; carrier payments are recorded on the carrier bill (BIL-024). Empty: "No payments found".

CAR-035 Opening a carrier from a shipment

On a shipment the carrier card opens a window showing the same Overview as this profile (sections 4.2 and 4.3).

CAR-036 Carrier monitoring links

Three small gray icons under the FMCSA card open the carrier in an outside service, in a new tab. Each can be turned on in Settings, Carriers (section 4.10); all are off at first.

Link	Tooltip	Opens
Carrier411	"View on Carrier411"	The carrier's Carrier411 page, looked up by the first MC number
CarrierOK	"View on CarrierOK"	The carrier's CarrierOK profile, looked up by the first MC number
Highway	"View on Highway"	The carrier's Highway search result, looked up by the USDOT number
These are links only; no data comes back. The ClassIT+ link is on shipment lines (section 4.2).		

Factoring company directory

CAR-037 Factoring companies

Some carriers are paid through a factoring company. The system keeps a directory of factoring companies with: name, logo, remit-to address, e-mail, phone, notice-of-assignment (NOA) e-mail, website and notes.

- On a carrier bill, the "Mail payment to" window has a select "Factoring with" listing the active factoring companies by name with their logos (BIL-013). Choosing one fills the bill's remit-to address with the factoring company's address instead of the carrier's.
- The directory holds no bank account numbers.
- It is loaded before go-live with the factoring companies on 10-4's carrier bills (10-4 supplies their names and remit-to details).
- Editing the directory on screen is not in the first version (see section 1.7).

CAR-038 Reading the directory

Users type in the "Factoring with" select to search by name. The list is the same for the whole account.

CAR-039 Carrier vetting rules

What the system checks before a carrier can be used, and what it leaves to 10-4's staff:

Check	What the system does in the first version
Government identity and authority	Works out the status from the FMCSA data (CAR-014): out of service, not authorized, no authority or unsatisfactory safety rating means "Don't use". No one can change that status by hand; an Owner can still cover one load with such a carrier by turning on "Override coverage status" (COV-017).
Insurance	Records the three insurance amounts and the earliest expiry date (CAR-021). An expired packet shows "Insurance expired" (CAR-020). The system does **not** compare the amounts with a minimum; staff read them.
Who may approve	Only an Owner can change a carrier to "Approved" or back (CAR-015); a Member cannot. A blocked ("Don't use") carrier can be used only when an Owner turns on "Override coverage status" (section 4.3).
Identity and double brokering	No automatic check for a carrier that re-brokers a load or for a changed identity. Staff compare the packet and the FMCSA data.
Payee or remit-to change	A new payment address or factoring company is saved without a second approval.

Adding a vendor

VND-001 Vendor type step

After choosing "Vendor" in the add window, a card labelled "Vendor type" shows nine radio rows with an icon each: "Chassis", "Crane", "Customs broker", "Insurance", "Lumper", "Steamship line", "Towing", "Transloader", "Warehouse". Freight carriers are not listed (they are added by lookup). Exactly one type can be chosen. The button "Select type" (full width) is disabled until one is chosen.

VND-002 Vendor name step

Field	Input	Required	Rules & messages
Vendor type	Read-only row with the chosen type		
Vendor name	Text, label "Vendor name"	Yes	Typing shows the "Did you mean?" list (VND-003).

- Button "Add vendor" (blue, full width) saves the vendor and opens its profile. On failure: "Failed to create vendor".
- Names are kept as typed. Sorting and search ignore case.

VND-003 Did you mean? for vendors

While typing, up to 5 existing vendors of the same type with similar names are listed under "Did you mean?", with the typed text highlighted. Clicking one opens that vendor and closes the window.

VND-004 Vendor from a shipment

On a shipment, a vendor can also be added from the carrier and vendor area: "Add another vendor" (types as checkboxes; name required: "Name is required to add a new vendor"; a list "Or select an existing vendor..."; error "Failed to create vendor"). See section 4.2.

Vendor profile

Where: a vendor card, the vendor on a shipment, or right after adding a vendor.

VND-005 Page layout

1. **Breadcrumb:** vendor icon, link "Vendor" (back to the Vendors tab), vendor name.
2. **Header:** a large clickable area with the vendor name and a pencil (tooltip "Edit vendor details"). When set, a grid with phone (click-to-call), e-mail and website. Below it a gray button listing the vendor types with icons (empty: a question icon and "+ add vendor type").
3. **Tabs:** "Overview", "Shipments", "Payments".
4. A vendor page has no Documents button, no packet or FMCSA cards.

VND-006 Overview blocks

Three columns on wide screens (blocks, Active shipments, notes), two on narrower ones.

Block	What it shows	Who can open the editor
Vendor types	One row per type with icon and name	Everyone
Contacts	Same card as for carriers (CAR-023). Empty: "+ Add contact".	Everyone
Billing	Heading "Billing", the billing address with a copy icon and the billing e-mails; empty: "no address on file"	Everyone (tooltip "Edit billing info")
Payment terms	" days from <Vendor bill / Pickup / Delivery>" (rules as CAR-026)	Owner
Tax & entity type	Heading "Tax & entity type", the legal entity type and a "Needs 1099" pill, or "+ Add legal entity type"	Owner
Accounting integration	Same block as CAR-029	Everyone
Active shipments	Loads with this vendor that are scheduled or in transit. Empty: "No active shipments".	
Notes	"+ note" box and the notes list	Everyone
There is no "External references" or "Support" block on vendors.		

VND-007 Edit vendor details window

Opened by the header pencil. Saves with "Update". Error: "Failed to save vendor info."

Field	Input	Required	Rules
Vendor name	Text	Yes	
Phone	US phone	No	
General Email	Text	No	
Website	Text	No	

VND-008 Vendor type window

Title "Vendor type". Checkbox cards for the nine types (CAR-003 icons; blue border and check when selected), the current types preselected. A vendor can have several types. Button "Change types". Error: "Failed to update vendor types". A vendor with no types shows "+ add vendor type".

VND-009 Billing window

Title "Billing" (payment icon). Saves as you go; no Save button. After each save: "Billing info saved" with "undo". Error: "Failed to save billing info."

Field	Input	Required	Rules
Billing address	Button showing the address, or the box "+ billing address"; opens the address window (company, street lines, city, state, zip, country USA/Canada/Mexico)	No	Saved when the address window closes with a change.
Billing email	Several e-mails as chips, placeholder "+ billing email"; suggests the vendor's contacts' e-mails	No	Each added or removed e-mail saves at once; a typed address is added when you leave the box.

- The vendor's payment contact (name, e-mail, phone) is read on bills and payments but changed from the contacts card.

VND-010 Payment terms window

Same as CAR-026 (Owner).

VND-011 Tax & entity type window

Same as CAR-027 with the select labelled "Business Entity" and without the "Business ID" row (Owner).

VND-012 Accounting Integration Settings

Same as CAR-029.

VND-013 Vendor Shipments tab

Header "All shipments" with a spinner while loading, then the loads that used this vendor, newest pickup first (rows as CAR-031). Right: note box and notes. Empty: "No shipments".

VND-014 Vendor Payments tab

Same as CAR-032 (payments 10-4 made to the vendor); opening a payment shows its details; no "Record payment" here.

VND-015 Vendor contacts

Same as CUS-018 for the vendor.

VND-016 Vendor documents

Vendors have no documents screen in the first version. Files for a vendor are attached to the shipment.

Who can do what

Action	Owner	Member	Customer / Carrier
See the list and profiles, search, filter	Yes	Yes	No
Look up and add a carrier, add a vendor	Yes	Yes	No
Change carrier status	Yes (as allowed in CAR-014)	No (read only)	No
Edit payment terms, tax and entity, 1099	Yes	No (not shown as clickable)	No
Edit vendor details, vendor types, billing, contacts, notes	Yes	Yes	No
Request a packet, save packet insurance, manage packet documents	Yes	Yes	No
Push bills switch	Yes	Yes	No
The carrier fills in its own packet			Carrier, on the secure link (section 4.11)
The system enforces every Owner-only action every time, not only by hiding buttons. A Member who changes status, payment terms or entity type gets a "not allowed" answer.			

4.9 Reports, Lanes and Commissions

> **In short:** The "Reporting" area is where 10-4 staff pull data out of the system. It has three parts. Saved **data exports** (shipment, customer and carrier reports) let you filter rows, choose and order columns, preview the result and download a CSV file. **Lanes** shows where 10-4 hauls freight on a map and in a table, with profit per lane. The **Commissions report** (Owner only) downloads the commissions earned in a date range. Owners and Members use the first two; customers and carriers cannot open any of this.

Reporting hub

Reached from "Reporting" in the left menu. Staff only (Owner and Member). Customers and carriers see "Page not found".

RPT-001 Reporting hub page

Title "Reporting", with two columns side by side: "Analytics" on the left and "Data exports" on the right. Both always show.

RPT-002 Analytics: the Lanes tile

Under "Analytics" there is one card, "Lanes", with a map icon on a soft grey grid background (the only analytic in the first version). It opens the Lanes page (LAN-001) and gets a blue outline on hover.

RPT-003 Data exports list

Under "Data exports" the system lists every saved report the user may see (RPT-004), one card per report, sorted by name A to Z. A small spinner shows next to the title while loading.

- Each card shows the report name, a lock icon when the report is a base report or the user cannot edit it, and an icon for the report type. The whole card is a link that opens the report.
- The hub has no create, rename, delete or share controls; those are inside each report (RPT-007 to RPT-013).

Report type	Icon
Shipment report	hand truck with a box
Customer report	group of people
Carrier report	truck
Commissions	download arrow

The lock is only a hint: a locked report still opens and can be used, filtered and downloaded.

RPT-004 Which reports a user sees

- Every account starts with three base reports: **Shipments**, **Customers** and **Carriers** (RPT-011).
- A report not shared with specific users or teams (RPT-013) is visible to every Owner and Member.
- A report shared with specific users or teams is visible only to the Owner, its creator, the listed users, and members of the listed teams.
- The **Commissions** card appears for Owners only and opens the Commissions report (COM-001).

RPT-005 Opening a report that does not exist

A link to a report that does not exist (or one the user may not see) shows "Report not found". While the list is still loading, a spinner shows, never "Report not found".

Report builder (shipment, customer and carrier reports)

The three report types share one layout and the same rules; differences are per type.

RPT-006 Builder layout

- **Header:** a back arrow to the Reporting hub, the report name in an input ("Name this report"), and on the right a "Users" button (RPT-013) and a "..." menu with "Duplicate" and "Delete".
- **Change bar** under the header; shows only with unsaved changes (RPT-008) or an error.
- **Main card** with tab "Filters" (on the carrier report "Filter"), tab "Columns", and a blue button "Download shipments" (or "Download customers" / "Download carriers") on the right.
- "Filters" tab: filter controls on the left, live preview of matching rows on the right. "Columns" tab: column catalogue on the left, selected columns on the right.
- The browser tab title is the report name.

RPT-007 Rename a report

- The name input is editable only if the user may edit the report and it is not a base report (pencil icon beside the name); otherwise it is locked with a lock icon.
- Names are 1 to 100 characters, trimmed, and unique in the account.
- A rename is saved with "Save" (RPT-008); nothing is saved while typing.

RPT-008 Save, Save as new and Revert

The change bar appears as soon as the name, filters or columns differ from what is saved.

Button	Style	When it shows	What it does
Save	blue	the user may edit this report	Saves name, filters and columns. Disabled while an error shows or the column list is empty or has an error.
Save as new	blue, outlined	always, when there are changes	Creates a new report from the current screen and opens it. Same disabled rule as Save.

Button	Style	When it shows	What it does
Revert	grey, outlined, with a refresh icon	always, when there are changes	Puts name, filters and columns back to the last saved version. Nothing is saved.

- Filter changes on a base report also show the change bar ("Save as new" or "Revert"). On a base report "Save" is available only when the **columns** changed, and saves the columns only (never the filters).
- A red banner shows the error text and clears as soon as the user changes the name, a filter or a column.

Message	When
There is another report definition with this same name. Make the name unique, then try again.	The name is used by another report.
You are not allowed to edit this report definition You can duplicate it instead.	A user without edit rights tries to save, delete or share.
another column has this name	Two selected columns have the same header (shown in red next to the column).

RPT-009 Duplicate

"Duplicate" in the "..." menu (always available) copies the report (name, filters, columns, sharing list) and opens the copy.

- The copy is named " copy"; if taken, the next free number: " copy 2", " copy 3". The number replaces the old one (never "copy 2 3"). "Save as new" (RPT-008) names the copy the same way.
- A user or team in the sharing list that no longer exists is dropped from the copy.

RPT-010 Delete

"Delete" in the "..." menu is disabled for base reports and for users without edit rights. It opens a confirmation: title "Delete report?", text "" will be deleted for everyone., buttons "Delete" (red) and "Cancel". After deletion the user returns to the Reporting hub. A failed delete shows the error text in the red banner, or "Something went wrong".

RPT-011 Base reports

Every account has three base reports that cannot be renamed, deleted or shared:

Base report	Starting columns
Shipments	Equipment, Carrier (the "Carrier Name" column), USDOT, MC Number, Cost, Price, Profit, Margin, Pickup Date, Delivery Date, Origin Postal Code, Destination Postal Code, Total Weight, Mode
Customers	Name, Website, Phone, Description, Primary Contact, Primary Contact Email, Primary Contact Phone, Shipments, Last Shipment Date (the "Last Booked Date" column), Last Note Date
Carriers	Name, USDOT Number, MC Number, Phone, HQ City, HQ State, Compliance Status, Primary Contact, Primary Contact Email, Primary Contact Phone

- An Owner can change the columns of a base report and save them; everyone else can change them on screen and use "Save as new".
- Base reports have no saved filters.
- The "Export" buttons on the Shipments list and the Customers list download the columns of the matching base report, so they follow an Owner's change.

RPT-012 Who may edit a report

- The Owner can edit every report except the locks on base reports (name, delete, share). The creator can edit their report.
- Everyone else can open, filter, preview and download it, and use "Duplicate" or "Save as new" for their own copy.
- Anyone who may see a report may download it.

RPT-013 Share a report: "Users & Teams"

The "Users" button (hover text "Manage report permissions") shows an avatar stack of the people and teams the report is shared with (up to 3 avatars, then "+N"). It shows only when the user may edit the report, it is not a base report, and there are no unsaved changes.

The button opens the "Users & Teams" window:

- An input "+ add user" (only for users who may edit). Typing lists matching **teams** first, then **users**, with the match highlighted. An entry already in the list is greyed out with a check mark.
- With an empty list and empty input the window says "All users can view this report" and "Add a user or team to limit access".
- The list has the header "User" and one row per user or team, with a trash icon "Remove access for " (only for users who may edit).
- An entry whose user or team no longer exists shows "Removed user" or "Removed team" and can be removed.
- Every add or remove is saved at once; no Save button. While saving, the input and trash icons are disabled and the window cannot be closed. If saving fails, the list returns to the last saved list and red error text shows under the input.
- A blue "Done" button below the window closes it.

Rules:

- An empty list means every Owner and Member can see the report; a filled list limits it (RPT-004).
- Listed users and teams can view and download, not edit.
- At most 100 entries, no duplicates. A new entry must be an existing user or team of the account ("Unknown user or team" otherwise).
- A base report is always visible to every user and cannot be shared ("A base report is always visible to every user.").
- If two people change the same sharing list at the same moment, the last change wins.

Shipment report: Filters tab

RPT-014 Shipment report filters

The same filters as the Shipments list filter window. The status filter offers all six statuses.

Filter	Input / options	Notes
search for...	free text	Matches like the list search. Applies after a short pause.
Status	checkboxes: Requested, Booked, Scheduled, In transit, Delivered, Canceled	Each with its status dot. "Scheduled" shows for staff users.
Equipment	12 checkboxes: LTL, Dry Van, Flatbed, Refrigerated, Intermodal, Drayage, Dump, Dry Bulk, Power Only, Driveaway, Auto Transport, Tanker; link "Select truckload" / "Unselect truckload"	"Select truckload" ticks every group except LTL. Ticking LTL limits the report to LTL shipments.
Booked date	date range with calendar, plus presets Today, Yesterday, This week, Last week, This month, Last month, This year, Last year	
Pickup date	date range, plus presets Today, Tomorrow, Yesterday, This week, Next week, Last week, This month, Next month, Last month, This year, Last year	
Delivery date	same as Pickup date	
Origin address	area picker ("Area")	
Destination	area picker ("Area")	
Carrier	picker "select a carrier"	
Customer	picker "select a customer", with "Recently shipped" and "Recently selected"	
Rep	picker "select a team or user"	Staff only.
Booked by	picker "select a team or user"	
Covered by	picker "select a team or user"	

- Active filters show as chips with an x to clear them.
- The filter window's footer button "See N shipments" is not shown inside a report; the preview shows the result.

RPT-015 Shipment report preview

A scrolling list of matching shipments in the Shipments list row layout, newest pickup first unless saved with another sort. It loads 24 rows at a time; the scroll position is remembered during the session.

- Empty state: "No shipments" with a dashed link "+ shipment" that opens the new shipment form.
- The number in "Download shipments" is the total number of matching shipments.

Customer report

RPT-016 Customer report filters and preview

- The tab is "Filters": a search box ("search for...") and, for staff users, "Rep" (picker "select a team or user"). A user lists the customers assigned to that user or to a team the user belongs to; a team lists the customers assigned to that team.
- The preview is the Customers list table with sortable headers "Customer", "/ contact", "Booked", "last", "Quoted", "last", "Credit", "Rep". Each row opens the customer.
- Sorting the preview is a view setting only; it is not saved, and the CSV is always in customer-name order.
- The report covers all non-archived customers, for every Owner and Member.
- "Download customers" shows the number of matching customers. No row paging in the preview.

Carrier report

RPT-017 Carrier report filters and preview

The tab is "Filter" (singular). Filters:

Filter	Input / options
search	free text. Matches the carrier name, and also a USDOT or MC number such as "MC-123", "DOT 123" or "USDOT 123".
Added date	date range with calendar and presets Today, Yesterday, This week, Last week, This month, Last month, This year, Last year. The date is the day the carrier was added to 10-4 TMS.
1099 Required	on/off switch. When on, only carriers that require a 1099 are included.

- The preview shows carrier cards like the Carriers list (status dot, name, "USDOT n MC-n City, ST zip"), 10 at a time, loading more on scroll.
- The report covers carriers in the Carriers list, not other (non-carrier) vendors.
- "Download carriers" shows the number of matching carriers.

RPT-018 Saved filters stay relative

A saved report keeps date presets as presets: one saved with "This month" always means the current month when opened. Pickers keep the chosen customer, carrier, rep, booked by and covered by. Empty filters are not saved. A value that cannot be used (for example a date range ending before it starts) is not accepted when saving.

Columns tab

RPT-019 Column catalogue and "find field..."

- The left side lists all columns the report type offers, under category headings (full lists in Appendix C). Headings are bold and open and close by click or keyboard.

- Shipment report: all categories open except "Handling Units", which starts closed. Customer and carrier reports: all open.
- The input "find field..." (with an x to clear) filters the list as the user types, by case-insensitive text match on the column name. While searching, every category is open and a category with no match is hidden.
- A column already in the report is shaded with a minus sign; a column not yet added shows a plus sign on hover.

RPT-020 Add and remove columns

- Clicking a catalogue column adds it at the end of the selected list (once only). Clicking a selected column removes it; each selected row also has a trash icon ("Remove column ").
- A report needs at least 1 column and can hold up to 189 (shipment), 68 (customer) or 31 (carrier).
- A live count " columns" shows at the top right of the selected list.

RPT-021 Reorder columns

The selected list is the column order of the CSV file. Each row has a drag handle; keyboard users focus a row and press Alt+Up Arrow or Alt+Down Arrow. The order is saved with the report.

RPT-022 Rename a column header

Each selected row shows the header text, plus the catalogue name in grey brackets when they differ, for example "Carrier (Carrier Name)". The pencil button ("Edit label") turns the row into an input.

- Enter or leaving the input saves the header; so does the green check button ("Save label for "). An empty input resets it to the catalogue name.
- The header is the first row of the CSV file; 1 to 100 characters.
- Headers must be unique in a report. A duplicate shows "another column has this name" in red on the later row; "Save", "Save as new" and "Download" stay disabled until fixed.

RPT-023 Clear all columns

A red outlined button "Clear all columns" (trash icon), shown only to users who may edit the report, removes every selected column. With no columns, "Save" and "Download" are disabled (no message).

Download

RPT-024 Download CSV

The blue button "Download shipments" (or customers / carriers) downloads one CSV file with the matching rows and selected columns in the selected order, using the current on-screen filters and columns even if unsaved.

- File name: " Shipments .csv" ("Customers" or "Carriers" for the other types).
- The button is disabled while the file is prepared (a spinner shows), with no columns or a column error, and when 0 rows match.
- Preview paging is ignored: all matching rows are exported (limit in RPT-026).
- Any Owner or Member who can open the report can download it.

RPT-025 CSV file format

- First row: column headers. One row per shipment, customer or carrier.
- Row order: shipments in the preview sort (newest pickup first unless saved otherwise); customers and carriers by name A to Z.
- Text values as stored. Cells starting with =, +, - or @ are protected so spreadsheets do not run them as formulas (negative numbers unaffected).
- Money: dollars with 2 decimals, no currency sign (475.00). Percent: 1 decimal, no % sign (13.6). Dates: yyyy-MM-dd. Yes/No columns: Yes or No. Whole numbers: digits only. Other numbers: up to 2 decimals. Missing values: empty cell.
- The status column shows the stored status word: requested, booked, scheduled, in-transit, delivered, canceled.
- A column with no data for a row (for example "Driver" before a carrier is assigned, or "Weight 3" on a shipment with two lines) is empty.

RPT-026 Row limit

One download holds at most 10,000 rows. When more match, the builder shows a grey hint under the tabs: "Only the first 10,000 shipments are exported." ("customers" / "carriers" for the other types). The file holds the first 10,000 rows in preview order.

RPT-027 Download messages

Message	When
Download will start soon	The download starts (green, short).
Download failed	The file could not be created or saved (red, with a "close" button).

RPT-028 Starter reports for 10-4's existing Quote Factory reports

10-4's Quote Factory shipment reports "LTL Report", "LTL Report - QF" and "Monthly Margin" are the shipment builder with saved filters and a column list:

- "LTL Report": the 14 columns of the base Shipments report.
- "LTL Report - QF": LTL equipment only, status Requested, Booked, Scheduled, In transit and Delivered, one customer, about 48 columns.
- "Monthly Margin": delivery date "This month", about 48 columns including the Accounting columns. 10-4 can create the same reports on day one with "Duplicate" or "Save as new".

RPT-029 More columns

Appendix C lists every available column: 189 for shipments, 68 for customers and 31 for carriers. A column not in Appendix C can be requested and added later without changing the screens.

RPT-030 Other users' changes

A report list or sharing change made by another user shows after a page reload; it does not update live.

Lanes

Reached from the Lanes tile on the Reporting hub. Back arrow to the Reporting hub and title "Lanes". Staff only (Owner and Member); customers and carriers see "Page not found".

LAN-001 Lanes page layout

Top to bottom: the title row (back arrow, "Lanes", a spinner while data loads, the filter box on the right), a map card, and the lane table.

LAN-002 Filter box and default filter

- The filter box shows active filters as chips. On opening, one chip shows: **"Pickup this week"** (week starts Sunday). An x on a chip removes that filter, for example to see all time.
- Clicking the box opens the shipment filter window ("View shipment filters") with the Shipments list filters: search, Status, Equipment, Booked date, Pickup date, Delivery date, Origin address, Destination, Carrier, Customer, Rep, Booked by, Covered by (options in RPT-014).
- Here the **Status** list offers only Booked, Delivered, In transit and Scheduled (Scheduled is for staff users).
- The footer button "See N shipments" closes the window; N is the number of matching shipments.
- Filters stay while the user moves around in the session and are part of the page address.

LAN-003 Which shipments are counted

- Draft shipments are never counted.
- With no status picked, the page counts Booked, Scheduled, In transit and Delivered; Canceled and Requested are not counted.
- Everything else follows the filters.

LAN-004 How lanes are formed

- The origin and destination of a lane are the city and state of a shipment's first and last stop, like "Austin, TX". A stop with no city shows as "Unknown".
- One map line and one table pair stands for the two cities. Shipments from A to B are **outbound** for A; shipments from B to A are **inbound** for A. A shipment starting and ending in the same city counts as outbound.
- In the table each direction is its own row (A to B with its count and profit; B to A with its count and profit).
- Profit of a shipment is its price minus its cost on the quote (0 when no quote). Profit per shipment is profit divided by the shipment count.

LAN-005 Map

A map of the continental United States sits above the table on a grey card.

- **Dots** mark each city. Bigger dots mean more shipments (inbound plus outbound); there is a maximum and a minimum dot size so every dot stays visible.
- **Dot colour** shows direction: a city that only ships out is light (white-grey), a city that only receives is solid blue, a mix shows both colours in proportion.

- **Lines** join the two cities of each lane. **Arrows** show direction: toward the destination for outbound shipments, the other way for inbound.
- **Tooltip:** pointing at a dot shows the city name in bold, then "N outbound" and "N inbound".
- The map opens centred on the average position of all lanes; with no lanes, a default view of the middle of the country.
- Cities outside the map area (for example Canada or Mexico) show at the nearest edge. A lane whose city has no map position appears in the table but not on the map.

LAN-006 Focus on one city

Clicking a dot, or an origin or destination name in the table, focuses that city: the map and table show only lanes touching it, and Totals is recalculated. Clicking the same city again clears the focus. No chip shows for the focus.

LAN-007 Lane table

A sticky header strip and one white card row per lane direction.

Column (header)	Meaning	Shown to
Origin	start city and state	all staff
Destination	end city and state	all staff
Shipments	number of shipments in this direction	all staff
Profit	total profit of those shipments	staff users
Profit per	profit divided by the number of shipments	staff users

- Money is dollars with cents and thousands separators, negatives with a minus sign ($1,800.00, -$50.00).
- On narrow screens the number cells stack at the right of each row.

LAN-008 Sorting the lane table

Each header is a button. The table opens sorted by "Shipments", largest first. Clicking a new header sorts ascending; clicking the same header again flips the direction. The active header is blue with an arrow. Numbers sort by value, text alphabetically.

LAN-009 Totals row

The last row (grey background, bold) shows "Totals" in the Destination cell, total shipments, total profit, and profit per shipment (total profit / total shipments). It follows the filters and city focus and is not clickable. With no lanes: 0 shipments and $0.00.

LAN-010 Empty state

With no matching lanes the table shows "No matching lane data" and a blue button "Reset filters", which restores "Pickup this week" and clears the focus. The map shows its default view.

LAN-011 Loading and errors

- A spinner next to the title shows while lanes load. The previous result stays visible until the new one arrives, and a late answer for an older filter is ignored.
- If lanes cannot be loaded, the page shows the error message instead of an empty or stale table.
- The Lanes page covers at most 20,000 shipments. With more, the page shows "Too many shipments for lanes; narrow the filters".

LAN-012 Profit columns are staff only

"Profit" and "Profit per" are visible to Owners and Members. Customers and carriers cannot open the Lanes page, and profit is never sent to them.

Commissions report

Reached from the "Commissions" card in the Data exports list (Owners only). Page title "Commissions report", with a back arrow to the Reporting hub. Unlike the other reports it has no preview, no columns tab and no saved versions: a single form that produces one CSV file.

COM-001 Who can use it

Owner only. The "Commissions" card is not shown to Members. A Member who opens the address directly sees "Page not found" and cannot download the file.

COM-002 The form

A centred white panel with these fields from top to bottom.

Field	Input / options	Required	Default	Rules & messages
Shipment date of	five choice cards with a calendar icon: Booked, Picked up, Delivered, Invoiced, Paid	Yes (one)	Booked	Chooses which shipment date the From/To range applies to (COM-003).
From	date picker (calendar icon, opens a calendar; shows a date like "Tue, Sep 1")	Yes	First day of last month	
To	date picker	Yes	Last day of the month of "From"	If "To" is before "From": "Date range is invalid" and nothing is downloaded.
Rep (optional)	picker "select a team or user"; groups "Recently selected" (last 5) and "Reps" (teams first, then users)	No	empty	Empty means all reps. Clearing the text empties the choice.
Download	blue full-width button			Spinner and disabled while the file is created.

COM-003 Meaning of "Shipment date of"

Only shipments with the chosen date inside the range (first and last day included) are included.

Choice	Date used
Booked	the date the shipment was booked
Picked up	the date the first stop was picked up
Delivered	the date the last stop was delivered
Invoiced	the date the customer invoice was sent
Paid	the date the customer invoice was paid in full

Draft and canceled shipments are never included.

COM-004 What the report contains

- One row for each shipment and each rep with a commission set on that shipment.
- With a rep chosen, only that rep's rows are included: a team matches rows of that team; a user only that user's rows.
- A commission is either a percent of the shipment's profit or a flat amount; the payout column holds the resulting dollars.
- A commission marked as paid on the shipment uses the amount frozen at that time (section 4.2, "Reps").
- Rows are ordered by rep name, then shipment date, then BOL.
- The header row is always present, even with no matching shipment.

COM-005 CSV columns

Column	Meaning
Rep	name of the user or team
Rep Type	User or Team
BOL	shipment BOL number
Shipment Date	the date chosen in "Shipment date of" (yyyy-MM-dd)
Customer	customer name
Origin	pickup city and state
Destination	delivery city and state
Price	customer price
Cost	carrier cost
Gross Profit	price minus cost
Commission Type	% or $
Commission	the percent or flat amount set for the rep

Column	Meaning
Payout	the dollars the rep earns on this shipment
Paid	Yes or No
Paid Date	date the commission was marked paid (empty if not paid)

Money uses 2 decimals without a currency sign.

COM-006 File name and messages

File name: "commissions-report .csv".

Message	When
Date range is invalid	"To" is before "From".
Download will start soon	The download starts.
Download failed	The file could not be saved.
Failed to generate report	The report could not be created.
Too many shipments for one report; narrow the date range	More than 10,000 shipments match.

Who can do what

Action	Owner	Member	Customer	Carrier
Open the Reporting hub and Lanes	Yes	Yes	No ("Page not found")	No
See Profit and Profit per on Lanes	Yes	Yes	No	No
Open, filter, preview and download a report they can see	Yes	Yes	No	No
Duplicate a report or Save as new	Yes	Yes	No	No
Rename, save, delete or share a report	Every non-base report	Only reports they created	No	No
Change the columns of a base report and save	Yes	No (use Save as new)	No	No
See reports limited to other users	Yes (all)	Only if listed, in a listed team, or the creator	No	No
Commissions report	Yes	No	No	No

4.10 Settings, Users, Account, Profile and Sign-in

> **In short:** what an Owner sets up once and a Member reads: Settings pages (carriers, customers, accounting, external references, notifications), users and teams, the company profile, each person's profile, and the sign-in, invite and password-reset pages. Customers and carriers never see Settings.

4.10.1 Settings home and shared page frame

SET-001 Settings home page

Reached from "Settings" in the left navigation; staff only. A grid of tiles (four across on a wide screen), each with an icon, bold title and short grey description; hover shows a blue ring.

#	Tile	Description (exact)	Opens	Extra
1	Your profile	"Update your name, photo, email, phone and password"	Your profile	Your photo or initials as the icon
2	Company	"Update company name, and logo"	Company	The company logo as the icon
3	Users	"Manage people"	Users	Count chip: number of users
4	Teams	"Manage groups of people"	Teams	Count chip: number of teams
5	Carriers	"Carrier integrations, legal agreements, and rate confirmations."	Carriers settings	
6	Customers	"Set global margins, customer login, and quote options"	Customers settings	
7	Accounting	"Send invoices and manage bills"	Accounting settings	
8	Notifications	"Manage in-app alerts"	Notifications window (SET-036)	Small grey dot on the icon
9	External references	"Associate entities in external systems with entities in 10-4 TMS."	External references	
10	Import from Quote Factory (Owners only)	"Bring your customers, carriers and shipments over from Quote Factory"	The import page, section 8	Not shown to Members

Tiles 1 to 9 are the same for Owners and Members.

SET-002 Shared page frame

Every Settings page, the profile and the Company page use the same frame:

- A top-left breadcrumb: a gear and "Settings", then "/" and the page name, for example "Settings / Carriers / Rate confirmations". Earlier crumbs are links; the Settings home has only "Settings".
- A round close "X" at the top right (accessible name "Close settings") returning to the previous page, else the Dashboard (the Quote form from the profile page).
- A centered footer, "App version: {8 characters}", with a small orange dot in front when a newer version is available.

SET-003 Who can change what in Settings

Owners change every setting. Members see the same pages with switches, number boxes and "Save"/"Done" buttons read-only (switches grey, inputs locked) and Owner-only tiles hidden. A Member change sent by other means is refused (ROL-008).

SET-004 Saving behavior

Switches and boxes save as soon as they change; tile pages have no page-level "Save" (exceptions with their own "Save" or "Update": the "Rate con email settings" window, the "Terms & Fees" editor, the Company page, the Profile page). A failed save shows a red message, for example "Error updating setting" for a switch. Tile windows close with "Done" or a click outside.

4.10.2 Carriers settings

SET-005 Carriers hub

Settings > Carriers shows a grid of tiles. For 10-4 the tiles are:

Tile	Description (exact)	Status shown	Opens
Carrier integrations	"Manage your carrier activations and notes"	Count chip: number of activated LTL carrier accounts (hidden at 0)	The LTL carrier accounts screen (section 4.6)
Carrier T&Cs	"Manage your terms & conditions"		Carrier terms & conditions (SET-006)
Rate confirmations	"Customize carrier rate con"		Rate confirmations (SET-008)
Tracking	"Truckload tracking integrations"	Name and logo of the active tracking tool, or "None selected"	Tracking window (SET-012)
Compliance	"Carrier onboarding integrations"	Name of the active compliance tool, or "None selected"	Compliance window (SET-013)
Carrier411	"Carrier monitoring"	"Show links to Carrier411" or "Not showing links"; green dot when on, white dot when off	Link window (SET-014)

Tile	Description (exact)	Status shown	Opens
CarrierOK	"Carrier monitoring"	"Show links to CarrierOK" or "Not showing links"; green dot when on, white dot when off	Link window
Highway	"Carrier monitoring"	"Show links to Highway" or "Not showing links"; green dot when on, white dot when off	Link window
ClassIT+	"Freight classification"	"Show links to ClassIT+" or "Not showing links"; green dot when on, white dot when off	Link window
Load boards (Owners only)	"Connect to load boards"		Load boards page (SET-015)

SET-006 Carrier terms & conditions page

Title "Carrier terms & conditions". A blue link "Public link" at the right opens the carrier's agreement in a new tab. Two grey cards with switches:

Switch	Title and text (exact)	Default	Effect
Request carrier packets	"Send packet requests" — "Automatically send a carrier packet request when covering with an unapproved carrier"	On	When on, covering a load with an unapproved carrier pre-selects "Request packet" (section 4.3)
Require carriers to agree to terms	"Use terms & conditions"	On	When on, the carrier must tick agreement to the terms when signing the rate confirmation (section 4.3)

A preview card shows the agreement text (dimmed to 30% when "Use terms & conditions" is off). Members see the cards read-only.

SET-007 Changing the agreement

The agreement document is supplied by 10-4 and loaded by Stackup. There is no editor on this page.

SET-008 Rate confirmations page

Title "Carrier rate con". Three blocks:

1. A card "Rate con email settings" (pencil icon) showing "Reply-to:" and "Contact phone:", each in bold, or the grey italic text "the person who covered the load" when blank. Clicking opens SET-009.
2. A card "Terms & Fees": a preview of the saved terms. For Owners the whole card is a button with a pencil that opens SET-010. For Members it is a plain card.
3. A row "Show shipment value on rate con" with a switch, default off. When on, the total value of the shipment prints on the carrier rate confirmation (section 6). If the switch cannot be saved, a red message reads "Error updating setting".

A closing info note: "Changes applied to future shipments only. Previously-covered shipments must drop carrier before new terms are applied."

SET-009 Rate con email settings window

A window titled "Rate con email settings". Text: "When blank, will default contact info to the person who covered." Fields and rules:

Field	Input	Required	Default	Rules and messages
Email address	E-mail	No	Blank	Valid e-mail; saved in lower case. "Enter a valid email address"
Phone	US phone	No	Blank	Complete US phone number. "Enter a valid phone number"

"Save" stores both. Error panel: "Error saving settings". Closing without saving discards changes.

SET-010 Terms & Fees editor

A window titled "Terms & Fees" with a rich-text editor (placeholder "Carrier rate confirmation terms and fees..."). Toolbar: Bold, Italic, Underline, Bulleted list, Numbered list. Buttons: "Save" (right) and "Revert to default" (bottom left, with confirmation "Are you sure you want to revert to the default terms?"). Rules:

- Each save creates a new version; older rate confirmations keep the terms they were sent with.
- Only simple formatting is allowed (paragraphs, line breaks, bold, italic, underline, bullets, numbers). Anything else: "Unsupported formatting".
- Empty text: "Terms are required". More than 50,000 characters: "Terms are too long". Save failure: "Error saving terms".
- The default text is 10-4's "Carrier Terms and Deductions" (section 6, Carrier rate confirmation).

SET-011 Where terms apply

New terms apply to loads covered after the change; a covered load keeps its terms until the carrier is dropped and the load covered again.

SET-012 Tracking window

Title "Tracking integrations". Two rows: **MacroPoint** and **Trucker Tools**. MacroPoint always shows "Not connected" and is not offered to 10-4 (section 7). Each row shows "Connected", "Setting up" (orange) or "Not connected", with a green ring and check on the active tool. Only one tool is active at a time: switching one on switches the other off. A connected row opens a panel with a back arrow, the name and an on/off switch. A tool that is not connected shows "Connect to {name}", says setup is done with Stackup Solutions, and has a link "Not a {name} customer?" "Sign up now". Members see the window read-only. For 10-4, Trucker Tools is connected and active.

SET-013 Compliance window

Title "Compliance integrations". Rows: **MyCarrierPortal** (the carrier portal of MyCarrierPackets) and **RMIS by Truckstop**. Each row shows "Connected", "Setting up" or "Not connected" (plus " as secondary" and " / disabled" when relevant). A connected tool has a switch "Enable {name}" and the text "Pulls carrier data from

{name} and monitors compliance status." A secondary source shows the box "Supporting mode" — "Will only return carrier data not affect compliance status." A tool that is not connected shows "Connect to {name}", the same Stackup setup text and a "Sign up now" link. For 10-4 none is connected; onboarding uses the built-in carrier packet (MyCarrierPackets is used by 10-4 on its own).

SET-014 Carrier monitoring link windows

Small window with the logo and a switch "Show links to {name}" (Carrier411, CarrierOK, Highway, ClassIT+), saved at once. A yellow box explains: "When enabled," "we will show links on carrier profiles that take you to {name}." For ClassIT+: "we will show links on line items that take you to ClassIT+ for freight classification lookup." Button "Done". All four are off for 10-4.

Load boards

SET-015 Load boards

Owners see the "Load boards" tile ("Connect to load boards") on Carriers settings. It opens "Settings / Carriers / Load boards" with two cards, "Post to DAT" and "Post to Truckstop".

- Each card shows a status dot and a status line: "Connected" with the button "Change", or "Not connected" with the button "Connect". For 10-4, DAT shows "Connected" and Truckstop shows "Not connected".
- Posting from the system is not in the first version (10-4 posts by hand). Pressing a card or its button shows "{name} is not available yet." and changes nothing.
- Members do not see the tile.

4.10.3 Customers settings

SET-016 Customers hub

Settings > Customers shows tiles, each with icon, title, description, a bottom status strip and, on four tiles, a top-right status dot (green on, white with grey border off). A pencil shows on hover; clicking opens a window.

Tile	Description (exact)	Status strip	Dot
Margin defaults and limits	"Set default margins for customers and minimum margin/profit"	Left "LTL {n}%", right "TL {n}%"; a second line "min {x}%", "min ${y}" or "min {x}% / ${y}" when limits exist	None
Reveal carrier names	"Customize when the customer can see the carrier name"	"Carrier names are visible" or "Carrier names are hidden"	Green when names are hidden
Customer login	"Allow customers to log in, run quotes, and track their shipments"	When on: a "Login link" button (copies the link) and "Auto-quote/dispatch" (only the options that are on); when off: "Disabled"	Green when on; open padlock green, closed red
Credit limits	"Limit individual customers to certain thresholds of credits"	"Disabled" or "Limits enforced"	Green when enforced

Tile	Description (exact)	Status strip	Dot
Customer visibility	"Limit users and teams access to customer records"	"Disabled" or "Limits enforced" (the choice is saved; it has no effect in the first version, see SET-021)	Red lock when limited

The "Credit limits" tile is shown for 10-4; the "Enforce credit limits" switch inside it is off at go-live (SET-020).

SET-017 "Margins and limits" window

Title "Margins and limits". Tabs "Global" and "LTL carriers". Blue "Done" closes. Read-only for Members.

Global tab. Column headings (hover tips in brackets): "Default" ("Start here"), "Min %" ("Don't go below"), "Min $" ("Don't go below"), "Max $" ("Don't go above").

Row	Fields	Format	Notes
LTL	Default LTL gross margin; Minimum LTL gross margin; Minimum LTL gross profit; Maximum LTL gross profit	Margins in % (up to 99.99; arrow keys step by 1, 10 or 0.1); profits in $	Default for 10-4 is 25%
Truckload	Default truckload gross margin; Minimum truckload gross margin; Minimum truckload gross profit; Maximum truckload gross profit	Same	Default for 10-4 is 25%
LTL Volume boost (orange row)	One pick list "select volume boost"	"x0 Not boosted", "x1.25 Small boost", "x1.5 Medium boost", "x2 Max boost"	When a boost and an LTL default are set, the resulting margin is shown in orange

A grey note reads "These amounts can be overridden with customer-specific settings." and, in bold, "Owners aren't limited by these amounts."

LTL carriers tab. One row per activated LTL carrier account: logo or initials, carrier name, account label or number, the same Default, Min %, Min $, Max $ boxes, and an orange "x{boost}%" when the carrier supports volume quotes. A value set here sets that carrier's limits (LTL-032). With none connected: "No LTL carriers connected."

Saving. Each box saves when the user leaves it. A green message "{label} saved" appears with an "undo" link. Labels: "TL Margin", "LTL Margin", "TL gross margin minimum", "TL gross profit minimum", "TL gross profit maximum", "LTL gross margin minimum", "LTL gross profit minimum", "LTL gross profit maximum", "LTL Volume boost". Clearing a box, or typing the value that is already inherited, removes that override. A failure shows a lasting red message ("An error occurred while saving." or the reason). Default margins can never be empty ("Default margin is required"). Dollar amounts may not exceed 1,000,000 ("Must be 1,000,000 or less").

Price. Margin: the customer's margin, else the account default. Limits have four levels (LTL-032). Quote price = cost / (1 – margin), never less than cost plus the minimum profit (SHP-077, SHP-078).

SET-018 "Hide carrier names" window

Title "Hide carrier names". Text: "By default, customers will be able to see the carrier's name and logo at all times." Two switches:

1. "Hide LTL carrier names" — "Don't show the carrier logo and name when sharing LTL quotes. (will still show on BOL and shipment details)".
2. "Hide TL carrier names" — "Don't show the carrier name, USDOT, or MC numbers on the BOL."

"Done" closes. Both are off for 10-4.

SET-019 "Customer login" window

Title "Customer login". Master switch "Customer login" ("Contacts (with an email address) can log in, run quotes, and see their shipments.") and the customer login link with a copy icon (POR-005). Two sub-switches, dimmed until login is on:

- "LTL auto-quoting" — "Customers can run LTL quotes and get immediate results."
- "LTL auto-dispatching" — "Customer-booked LTL shipments will be automatically dispatched."

"Done" closes. Each customer can override these (section 4.7); when the company switch is off the customer page warns: "Customer login is disabled in account settings." / "You can still change this, but it won't have an effect until enabled by an owner of your account." All three are on for 10-4.

SET-020 "Credit limits" window

Title "Credit limits". Switch "Enforce credit limits" (Members see "Enabled" or "Disabled") with the text "Block booking of new shipments when the balance of all open invoices and active shipments exceeds the customer's credit limit." and "Credit limits are set within each customer account." Below, dimmed until enforcement is on: switch "Notify on credit increase" — "Email all reps for customer when credit limit is increased." "Done" closes. The switch is saved; the e-mail itself is planned for later (section 1.7). Enforcement is **off at go-live**: credit figures are always shown, but no booking is blocked and no credit refusal message appears. When on, booking above the available credit is blocked (rule: PAY-022; messages: CUS-028, CUS-029, LTL-025, LTL-075, POR-035). The automatic 31-day booking hold is planned for later.

SET-021 "Limit customer visibility" window

Lock icon and title "Limit customer visibility". Text: "When enabled, we limit who can access customer records. Only customer reps can view and run quotes for that customer." and "When disabled, users have access to all customer records." Footer row "Limit customer visibility" with a switch. Close by clicking outside. **In the first version the choice is saved but not applied:** every staff user sees every customer (ROL-019).

SET-022 Customer settings effect on other screens

- Hidden carrier names apply to customer-facing quotes, documents and the portal (4.6, 4.11, 6).
- Customer login settings decide who may use the portal (4.11).
- Credit limits block "Book" only when "Enforce credit limits" is on (PAY-022).

4.10.4 Accounting settings

SET-023 Accounting hub

Tiles with a status strip and dot (green on, orange needs attention, white off):

Tile	Description (exact)	Status strip	Opens
Sync to QuickBooks Online	"Automatically sync bills and invoices"	"Syncing" with bold "Bills & Invoices" (or just "Bills" or "Invoices"); "Not syncing" when connected but nothing syncs; "Not connected to QuickBooks"	QuickBooks window
Cc invoices	"Send copies of all customer invoices to an email address"	Green count badge with the number of addresses (no badge at 0)	Cc list window
Request more credit	"Allow reps to request a credit limit increase for a customer via email"	Count of addresses	Cc list window (shown whenever the "Credit limits" tile is shown)
Customer terms	"When do you want your customers to pay you?"	"Pay within" bold "{n} days" ("1 day")	Customer terms window
Vendor payment terms	"When do you pay vendors?"	"Pay within" bold "{n} days of Vendor bill" (or "of Delivery", "of Pickup")	Vendor terms window
Factoring	"Manage settings for your factoring service"	"Not factoring" or the factoring company's logo and name	Factoring window
QuickPay	"Carriers request a quicker payment, you get a discount."	"Not providing QuickPay" or "QuickPay within" bold "{n} days" "({fee}%)"	QuickPay window

If accounting is off for the company, the page shows the heading "Simplify your accounting tasks.", the text "We've worked hard to build tools that make accounting easy. Tailored to the needs of freight brokers, these features take the pain out of invoicing and billing.", "Contact support to enable accounting.", and three panels "Shipper invoices", "Factoring" and "Carrier bills". Accounting is on for 10-4.

SET-024 QuickBooks window

Not connected: QuickBooks logo, "First, let's connect to QuickBooks", "When prompted, log into your account" and a blue "Connect" button; afterwards "Connected!". A lost connection shows "Not connected" and "Reconnect". *Connected:* a header with "Quickbooks Online", "Company ID: {id}" (click to copy) and a "Disconnect" button ("Disconnected!" confirmation). Below, a notice "Verify your account mappings" — "Validate after making account selections. Incorrect mappings may result in transactions being recorded to the wrong QuickBooks Online accounts." and two cards (dimmed for non-Owners):

- **Bills:** a picker "Expense account:" (placeholder "Select expense account for bills..." or "Currently: {name}", each option shows the full account name and its type), a clear button, and a switch "Sync bills" ("Sync carrier bills"), usable once an account is chosen.

- **Invoices:** a picker "Service:" (placeholder "Select service item for invoices..."), a clear button, and a switch "Sync invoices" ("Sync customer invoices"), usable once a service is chosen.

Clearing a choice also switches off its sync. If the account list cannot load, a red bar says so. What is pushed and when: INT-025 to INT-035.

SET-025 Cc invoices window

E-mail icon, box "Send a copy of all invoices to:" and an "Add" button. Addresses are trimmed and lower-cased; duplicates and empty values ignored; shown as chips with a remove "x" (accessible name "Remove email"). Up to 20; invalid: "Enter a valid email address", more than 20: "At most 20 emails". Each add or remove saves at once. "Done" closes. For "Request more credit" the label is "Send credit limit requests to:" with the extra text: `When an email is provided, a "Request more credit" button appears in the Credit Limit modal, letting reps quickly send an email to request an increase.`

SET-026 Customer terms window

Title "Customer terms". Field "Customers pay within" with a number box and the word "days" (whole number 0 to 120, default 30). Saves on leaving the box or after a short pause. "Done" closes. Default due date on customer invoices; a customer can have its own terms (4.7).

SET-027 Vendor payment terms window

Title "When entering a vendor bill..." Label "Set Bill date to" (Bill date in bold) with three radio cards, saved at once when chosen:

Card	Text	Icon
"Vendor bill / date"	The date on the carrier's bill	Document
"Pickup / date"	The pickup date	Calendar (blue)
"Delivery / date"	The delivery date	Delivery (green)

Then "Pay within" and a number box "days" (0 to 120, default 30). "Done" closes. Defaults on carrier bills (4.5); a carrier can have its own terms (4.8).

SET-028 Factoring window

Title "Factoring" with a master switch ("Enable factoring"/"Disable factoring"). When on: a pick list "Factoring company you use" (required, from 10-4's list of factoring companies), and a row "New customers are factored" with a switch. "Done" saves. A company is required when on ("Factoring company is required"). 10-4 does not factor, so the tile reads "Not factoring".

SET-029 QuickPay window

Header "QuickPay" and a master switch "Allow Quickpay". Dimmed until on: "Pay within" a number of days and "For a discount of" a percent (0 to 100, up to 2 decimals). QuickPay can only be switched on once both are filled ("Enter the QuickPay days and discount first"). "Done" closes. QuickPay is off for 10-4 (3 days and

2.5% are stored for later). The setting is saved, but carriers cannot request quicker payment yet (planned for later).

SET-030 Accounting rights

All accounting switches and fields are Owner-only (ROL-021).

4.10.5 External references

SET-031 External references page

Defines the kinds of outside-system IDs (for example a CRM customer ID) that can be stored on customers and carriers. Title "External references" with an info icon, and an outlined blue button "+ Add" at the right. The info text reads: "Link 10-4 TMS records (Customers, Vendors / Carriers, Contacts, Addressbook Entries, and Shipments) to records in external systems like a TMS, CRM, or accounting tool. Use them in reports to join data across systems, and add a URI template to deep-link directly to the external record."

- With no definitions the page shows "Nothing added yet." and a blue link "+ Add external reference".
- Each definition is a card with the name, its code in grey monospace and a chip per record type. Owners click a card to edit it. Trash button: "Delete {name}?" — `Existing external references using "{name}" will no longer work.` — buttons "Cancel" and "Delete reference". Deleting removes the values already entered.
- Members see no "+ Add" button and no trash buttons.

SET-032 Add or edit window

A red panel "Failed to save external attribute definition" shows the reasons.

Field	Input	Required	Default	Rules
Name	Text with a drop-down of suggested systems (HubSpot, QuickBooks, DAT and others), free text allowed	Yes	Empty	Choosing a suggestion fills the name, the code and which record types apply; "Contacts" stays on unless you switch it off. 1 to 100 characters ("Name is required"). Editable after creation
Code	Text (monospace)	Yes	Made from the name (lower case, spaces become dashes)	Letters, numbers, dots, dashes, underscores ("Use lowercase letters, numbers, dots, dashes or underscores"). Permanent once saved (shown with a lock)

Field	Input	Required	Default	Rules
Entity types	One switch per type: "Customers", "Vendors / Carriers", "Contacts", "Addressbook Entries", "Shipments"	At least the types you want	All on	Turn off the types that do not exist in the outside system
URI Template	URL box under each switched-on type	No	Empty	Must start with https:// or http:// and contain {value} (for example `https://crm.example.test/customers/{value}`). "Enter a URL that contains {value}"
Ensure unique values	Switch		On	On: one outside ID can be linked to one record only. Off: duplicates allowed ("Enforce uniqueness"/"Allow duplicates" is shown when editing). Cannot be changed later ("Uniqueness cannot be changed")

"Save" stores the definition.

SET-033 Info pop-ups

- Code: "A human readable identifier for the specific kind of reference." "The code is permanent and cannot be changed. The name appears throughout the UI and in exports."
- Entity types: "Disable entity types that don't exist in this external system." "The URI template builds a deep link into the external system. {value} is replaced with the external reference value for each record."
- Uniqueness: "Each external ID can only be linked to one record in 10-4 TMS. For example, with uniqueness enforced, a single HubSpot customer can map to at most one 10-4 TMS customer." "Cannot be changed once created. When in doubt, leave it on."

SET-034 Using references

Users enter values on customers and carriers/vendors (4.7, 4.8): 1 to 200 characters ("Enter a value"), and with uniqueness on it cannot already belong to another record ("Already linked to another record"). The same reference cannot be added twice to one record ("Already added"). References appear as a report column category "External References" (section 4.9).

SET-035 External references for shipments

Definitions for Contacts, Addressbook Entries and Shipments can be created, but values can only be entered on customers and carriers/vendors.

4.10.6 Notifications

SET-036 Notifications window

A small window with a chat icon, the title "Notifications" and "Choose in-app notification alerts to receive:". With nothing to choose it shows "No sources configured" (the case for 10-4). Each person sets their own alerts, saved at once. Live alerts: section 4.12.

4.10.7 Data page

SET-037 "Data" page (staff)

Staff page "Settings / Data" with a close "X" and one tile "Shipments": "Download all shipment data to a .CSV file", blue button "Download".

- "Download" saves a CSV of every shipment (standard columns, no filters), named company name, "Shipments", date and time. A spinner shows meanwhile; messages "Download will start soon" and, on failure, "Download failed".
- Owners and Members can use it; customers cannot (they have their own "Data" lanes page, 4.11).
- The page has no tile on the Settings home; staff open it from the address Stackup gives 10-4.

4.10.8 Users

USR-001 Users page

Breadcrumb "Settings / Users", heading "Users". Owners see a box "Invite by email" and a button "Invite" at the right. People are grouped under small grey capital headings "Owners", "Members" and, when invites wait, "Invited". Each row card shows photo or initials (owners have an orange ring), full name, job title if set, and an orange "Owner" pill for owners; clicking opens the person's card (USR-005). No search.

USR-002 Invite a person

Field	Input	Required	Rules and messages
Invite by email	E-mail, saved in lower case	Yes	Valid e-mail: "Enter a valid email address". Already invited: "Already invited". Already a user: "Already on the account". Any other problem: "Something went wrong"

"Invite" (Owners only) creates a pending invite with role Member, sends the invite e-mail (section 5, Invite), shows the person in "Invited" and empties the box. One waiting invite per e-mail.

USR-003 Invited rows

Under "Invited" each row shows the e-mail and the date invited. Clicking opens the invite card (USR-007).

USR-004 Counts

The Users tile shows the number of users.

USR-005 User card

Window with photo or initials, an "Owner" or "Member" badge, team chips, name (trash button for Owners, not for yourself), e-mail (mail icon; click to copy), phone (click to copy), and — for yourself only — a "Logout" link. A footer strip shows the company name and the "Owner" switch.

- **Owner switch.** Owners can switch another person between Owner and Member. It is disabled for yourself. Failure message: "Failed to update role". See ROL-015.
- **Remove user.** The trash opens "Are you sure you want to remove {name}?" with "No, go back" and "Remove user". On success the message is "{name} removed". No "Undo": an Owner must invite the person again. On failure the reason is shown or "Failed to remove user". See ROL-016.
- **Team chips.** Owners see "+ add to team" (hidden when the person is in all teams) and a trash icon on each chip (USR-017).

USR-006 Phone and e-mail icons

The e-mail icon opens the person's mail program; its tool tip is "Send email". The phone icon has the tool tip "Start call". The copy buttons show "Click to copy email" and "Click to copy phone".

USR-007 Invite card

Shows the invited e-mail, a role badge, "Invited on {date}" and a "Resend" button. A footer strip shows the company name and an Owners-only "Owner" switch that sets the role the person will get.

- **Resend** sends the e-mail again and renews the 14-day expiry. The button becomes "Sent" and the message "Invite resent!" shows. A failure shows the reason.
- **Cancel invite.** The trash opens "You're about to cancel the invite for {e-mail}." with "No, go back" and "Cancel Invite". On success: "Invite cancelled." Failure: "Failed to cancel invite".
- Role change failure: "Failed to update role".

USR-008 Invite expiry

Invites expire after 14 days; expired ones stay listed so an Owner can resend or cancel.

USR-009 Users page for Members

Members see the lists and can open cards, but have no invite box, no role switch, no trash and no resend.

USR-010 Unknown links

A link to a user or invite that does not exist returns to the Users list; a valid one opens the card.

USR-011 Last Owner and self rules

The company must keep at least one Owner; nobody can change or remove themselves (ROL-015, ROL-016).

4.10.9 Teams

USR-012 Teams page

Breadcrumb "Settings / Teams", heading "Teams". Owners have a "+" icon button to add a team. Once a team exists a search box (placeholder "search", clear "x") filters by name. Teams are cards listed by name with the user count at the right. With no team: Members see "No teams quite yet!"; Owners see an icon, "Hey, let's create your first team." and a button "Create a team". A search with no result shows "No teams found when searching for {text}."

USR-013 Add team

Window with a field "Team Name" (required) and a button "Add team". A name already used (any capitalization) shows "A team with that name already exists"; an empty name "Team name is required"; maximum 100 characters. Then the new team page opens. Failure: "Failed to add team."

USR-014 Team page

Breadcrumb "Settings / Teams / {team name}". Owners edit the title in place (placeholder "Team name"); it saves on Enter or leaving the box ("Renamed team to {name}" or "Failed to rename team"). When the team has people there is a search box "search" and two buttons "Display with Grid View" and "Display with List View". The body shows a card or row per person, starting with an "Add person" tile (disabled when everybody is already in). Managers show an orange "Manager" strip (ROL-018).

USR-015 Add person

"Add person" opens a window "Add existing user" with a pick list of staff who are not in the team. Choosing a person adds them at once. Failure: "Failed to add user to team {name}".

USR-016 Remove person from team

The trash on a card opens "You're about to remove {person} from {team}." / "You can always add them back later." with "No, go back" and "Remove from team". Failure: "Failed to remove user from team".

USR-017 Teams from a user card or profile

On a user's card and on your own profile, "+ add to team" opens a window "Add to team" with one box "Search teams..." (teams the person is already in are left out); choosing a team adds the person at once and closes the window. The trash on a team chip opens "You're about to remove {name or yourself} from {team}." with "No, go back" and "Remove from team". Failure messages: "Failed to add user to team", "Failed to remove user from team". Owners only.

USR-018 Manager

A person's quick card on a team page has a footer row with the team name and an Owners-only "Manager" switch (orange background when on).

USR-019 Delete team

A trash button appears next to the team name only when the team has no people. It opens "You're about to remove the team {name}." with "No, go back" and "Remove team". Failure: "Failed to remove team".

USR-020 Teams for Members

Members see teams and people but have no add, rename, remove or manager controls.

4.10.10 Company profile

ACT-001 Company page

Breadcrumb "Settings / Company". A centered card with header "Company information" (left) and "Account {number}" (right, when the company has one).

- **Members** see a read-only summary: the company name as a large heading, "Billing address:" (company in bold, street, "city, ST zip"), "Billing contact:" (name, e-mail, phone), "Phone:" and the logo.
- **Owners** see the edit form (ACT-002).

ACT-002 Company form (Owners)

Field	Input	Required	Default	Rules
Company	Text	Yes	Company name	Up to 200 characters
Phone	US phone	Yes	Company phone	Complete US phone number
MC #	Text, placeholder "MC"	Yes	MC number	Digits only; other characters are removed when you leave the box
Payment contact	Text	Yes		Up to 200 characters
Payment email	E-mail	Yes		Valid e-mail
Payment phone	US phone	Yes		Complete US phone
Payment address	Click-to-edit line	Yes		Opens the address window (ACT-004)
Billing contact, Billing email, Billing phone, Billing address	Same as above	Yes	Same as the payment block	Same rules

The blue "Update" button is disabled until something changed and every required field is valid. On success: "Changes saved" with an "undo" link that restores the previous values. On failure: the first field error, or "Something went wrong!".

ACT-003 "Customers send payment to" and "Carriers send bills to"

Two blocks: "Customers send payment to" (printed on invoices) and "Carriers send bills to" (printed on rate confirmations). A small switch "Same" beside the second heading, on at the start when the blocks are

identical, copies the payment fields into the dimmed billing fields (and keeps copying changes).

ACT-004 Address window

Fields: company, street 1, street 2, neighborhood, city, state, ZIP, country (default USA). City, state and ZIP can be found by typing. Both street lines are kept.

ACT-005 Company logo

Owners only: click the logo box to choose an image (PNG, JPEG, WEBP or GIF, up to 5 MB). With no logo, company initials show. A "remove" link with a trash icon deletes it. The logo shows in the navigation, on documents and on the customer login.

4.10.11 Your profile

ACT-006 Profile page

Reached from the navigation user block or the "Your profile" tile. Breadcrumb "Settings / Profile" and a close "X". A white card with two columns:

- **Left:** a round photo (initials on blue if none), the role chip ("Owner" in orange, "Member" in grey), a team block, and a "Log out" button at the bottom.
- **Right:** the form (ACT-007) and "Change password" (ACT-009).

ACT-007 Profile form

Field	Input	Required	Default	Rules and messages
First name	Text	Yes	Your first name	Up to 100 characters
Last name	Text	Yes	Your last name	Up to 100 characters
Email	E-mail	Yes	Your login e-mail	Valid; changing it needs a current password (ACT-010)
Phone	US phone with flag	Yes	Your phone	Complete US phone; an extension is allowed ("(555) 010-0101 ×8")

"Save" is disabled until something changed. Success: "Profile updated". Failure: a red line under Phone and the message "Profile update failed".

ACT-008 Photo and teams

Click the round photo to upload one (PNG, JPEG, WEBP or GIF, up to 5 MB); a "remove" button with a trash icon shows when set ("Failed to remove photo" on failure). The team block lists your teams; "+ add to team" and the team trash follow USR-017 (Owners only).

ACT-009 Change password

The outlined button "Change password" opens a grey box with:

Field	Rules
Current password	Required. "Current password is incorrect."
New password	Required. A show/hide eye button. The rule box (red) appears after a failed attempt: "Please ensure password contains a lowercase letter, upper case letter, a number, a special character, and is at least 8 characters in length."

Buttons: "Change password" (blue, disabled while empty or saving) and "Cancel". Success: "Password changed"; the box closes and your other devices are signed out. Failure: "Password change failed". Customers do not have this button (they have no password).

ACT-010 Changing your login e-mail

Changing Email shows a "Current password" field under Phone ("Enter your current password to change your email."). After "Save" the old e-mail keeps working and the page shows "Check {new e-mail} for a link to confirm your new email." A link is mailed to the new address; opening it (while signed in) shows "Confirm your new login email." with a "Confirm" button; nothing changes until it is pressed. Then: "Your login email is now {e-mail}." with a "Continue" link. An address already used by another person gives "Account already exists"; a bad or old link gives "This link is invalid or has expired."; a link opened by a different signed-in person gives "This link belongs to another account." The link works for 24 hours.

ACT-011 Log out and version

"Log out" ends the session and shows the "Logged out" page. Footer: "App version: {8 characters}" (SET-002).

4.10.12 Sign-in, sign-out, invite and password pages

ACT-012 Log in page

Dark full-screen page, white card: heading "Log in", fields "Email" and "Password", a blue button "Log in", and a link "Forgot password?" (which carries the typed e-mail). After login the user goes to the page they wanted, or the Dashboard. Customers use the customer login link instead (ROL-011). Messages: "Wrong email or password."; "Too many attempts. Try again in a minute."; "We couldn't reach the server. Try again." "Wrong email or password." also shows for an unknown e-mail (ROL-010). Blocked or removed users see "Authentication error" ("This user cannot log in. Please contact Support."); an unmatched customer login link shows "Unable to load account" (both NAV-015).

ACT-013 Logged out page

Dark page with a user icon, heading "Logged out", "You've been logged out." and an outlined button "Log back in" (to "Log in", then back to the previous page). Logout failure: "Error logging out" with "Try again". Also shown when a session ends.

ACT-014 Invite page, new person

Company logo, "{inviter name} invites you to join the team at {company}.", a white card with the sign-up form (ACT-016) and "Already have an account? Log in".

ACT-015 Invite page, person who already has a login

Card with photo or initials, name, e-mail and two buttons: "Continue" (sign in as this person) and "Use another account". Below: "Or, create a new account", which switches to the sign-up form (with "Or Log into your existing account").

ACT-016 Sign-up form

Field	Input	Required	Rules and messages
First name	Text	Yes	Up to 100 characters ("First name is required")
Last name	Text	Yes	"Last name is required"
Email	E-mail, lower case	Yes	Must be the invited address: "This invite was sent to {e-mail}". Already used: "Account already exists"
Phone	US phone	Yes	Complete US phone
Password	Password	Yes	"Please ensure password contains a lowercase letter, upper case letter, a number, a special character, and is at least 8 characters in length."

Button "Save" is disabled until the form is valid. Other errors: "Something went wrong". After "Save" the person is signed in and sent to the join page.

ACT-017 "That email sounds familiar"

For an e-mail that already has a login, a window shows an emoji, the heading "That email sounds familiar", the e-mail, the text "is already being used by an existing account." and two buttons: "Log in" and "Change email".

ACT-018 Invalid or expired invite

A dark page with an icon and "Oops, this invite isn't working." and "Try contacting the person who sent you this invite." An expired invite shows "Oops, this invite has expired." A failed acceptance shows "Oops, something went wrong."

ACT-019 Join page

A white card with the person's photo, an arrow and the company logo, the heading "Join {company}" and the sentence "I accept the invitation to join {company}." Buttons: "Decline" (back to the home page, nothing changes) and "Agree & join". The person must be signed in with the invited e-mail ("This invite was sent to a different email address.").

ACT-020 After joining

"Agree & join" adds the person with the role chosen in the invite, removes the invite and opens the Dashboard. A person who signs up but leaves before agreeing can log in later and still reach the join page.

ACT-021 Invite e-mail

See section 5 (Invite): invite link and the Owner's name; replies go to the Owner.

ACT-022 Session lost

When a session ends (for example a password change elsewhere or removal), the next click leads to "Log in" or "Logged out". Gate screens: NAV-015.

ACT-023 Forgot password page

Heading "Forgot Your Password?", text "Enter your email address and we will send you instructions to reset your password.", field "Email address", button "Continue", link "Back to login". After "Continue" the heading is "Check Your Email" and the text "Please check the email address {e-mail} for instructions to reset your password." with a "Resend email" button. Messages: "Enter a valid email"; "Too many attempts. Try again in a minute."

ACT-024 Reset password page

Opened from the e-mail link (valid 60 minutes, once). Heading "Change Your Password", text "Enter a new password below to change your password.", fields "New password" and "Re-enter new password", the password rule text, and a button "Reset password". Mismatch: "Passwords do not match." Success: heading "Password Changed!", "Your password has been changed successfully." and a link "Log in". All the user's sessions end. A bad or old link shows "This reset link is invalid or has expired." / "Ask for a new link and use it within 60 minutes." with a button "Send a new link".

ACT-025 Password reset e-mail

Subject "Reset your password". Text: "We received a request to reset the password for {e-mail}." with a "Reset your password" link; footer "The link expires in 60 minutes. If you did not ask for this, ignore this email; your password does not change." (Section 5.)

Who can do what

- **Owner:** edits all Settings pages, Users, Teams, Company, Import and the Load boards tile; own profile.
- **Member:** reads Settings pages, Users, Teams and Company; edits own profile, photo and password; can use the Data page.
- **Customer:** own profile only (no Settings, no password); signs in with the customer login link.
- **Carrier:** none of these pages.
- Role rules: ROL-002, ROL-003, ROL-025.

4.11 Customer portal and secure links

In short: Customers of 10-4 can sign in to a portal with their e-mail address, run LTL quotes, book, follow their shipments, download their documents and see their invoices. They see prices only, never 10-4's cost or margin. People who do not sign in (a shipper contact, a carrier, a customer's accounts-payable clerk) use secure links from e-mails that open one quote, one shipment, one invoice, one rate confirmation or one carrier packet. Staff control who gets access and what is shared.

Note on the customer screens. The customer screens in this section follow the agreed design. They will be confirmed against 10-4's test customer login (see the Summary, section 9).

4.11.1 The customer portal

Access

POR-001 Who can use the portal

A person can use the portal only when all of these are true:

1. The account switch "Customer login" is on (Settings > Customers).
2. The switch "Customer login" is on for the customer (customer settings, "Booking and quoting" card).
3. The person is a contact of that customer and the contact has an e-mail address.
4. The customer is not archived and the contact is not deleted. The checks run on every request, so turning a switch off takes effect at once. A contact of several customers sees all of them and can switch between them on the forms. A staff member keeps both ways of signing in: password for staff, e-mail link for the portal.

POR-002 The account switches for customers

Where	Switch	What it controls
Settings > Customers > "Customer login" tile	"Customer login"	Contacts (with an e-mail address) can log in, run quotes, and see their shipments. Shows the login link with a copy icon.
Same window	"LTL auto-quoting"	"Customers can run LTL quotes and get immediate results." Needs the customer switch too (POR-021).
Same window	"LTL auto-dispatching"	"Customer-booked LTL shipments will be automatically dispatched." Needs the customer switch too (POR-036).
Customer settings, "Booking and quoting"	"Customer login", "Enable booking", auto-quoting, auto-dispatching	The same switches for one customer. "Enable booking" off is a booking hold (POR-035).

Where	Switch	What it controls
Settings > Customers > "Reveal carrier names"	"Hide Carrier Names"	Whether customers see carrier names (POR-060). 10-4 currently shows carrier names.
Settings > Customers > "Credit limits"	"Enforce credit limits" (Owner)	Whether booking stops when credit is used up (POR-035; rule in PAY-022 and SET-020). **Off at go-live**: credit figures are kept, but no booking is stopped for credit.

POR-003 The login link

Staff copy the login link from the "Customer login" tile ("Copy link") or the header of the Customers list ("Customer login" / "Copy link") and send it to the customer. It opens 10-4's own branded login page.

POR-004 Contacts without access

If a person signs in with an e-mail that is not a contact of a customer (or access was switched off in between), the portal shows the screen in POR-009 and no session starts.

Signing in

POR-005 Login page

Sign-in is a one-time link sent by e-mail. There is no password and no typed code. The branded page shows the account logo, the heading "Log in to ", a box "Email" and the button "Email me a login link". After sending it reads "Check your email" / "We sent a login link to . It expires in 15 minutes."

POR-006 Login e-mail

The e-mail is sent only if the address belongs to a contact who may use the portal (POR-001). For any other address nothing is sent, but the page shows the same "Check your email" text so nobody can find out which addresses exist. Subject "Log in to "; text "Use the link below to log in to ." with a button "Log in" and the note "This link expires in 15 minutes and works once. If you didn't ask for it, you can ignore this email." It is sent in 10-4's name (section 5). Too many attempts show a "too many requests" message.

POR-007 Opening the link

The link works once, for 15 minutes. It signs the customer in and opens the quote form (or the page they were trying to reach), and is removed from the address bar.

POR-008 Invalid or used link

A used, expired or damaged link shows the card "This login link is invalid or has expired." with the link "Log in again" (opens 10-4's login page).

POR-009 "We don't recognize that email address."

When the e-mail is no longer a portal contact, the screen shows 10-4's logo and name, the heading "We don't recognize that email address.", the line " wasn't found" and two cards: "**Need an account?** Call us to set up a

new account." with a "Call" button (10-4's phone) and "**Wrong email?** Try logging in again with a different email address." with a "Log out" button.

POR-010 Session end

"Log out" (profile) and a lost session both lead to the page "Logged out" / "You've been logged out." with the button "Log back in", which returns to 10-4's login page. After signing in again the customer returns to the page they were on.

POR-011 Quote link to portal

On a secure quote link (LNK-005) the button "Customer login" signs the customer in and returns them to the full results page of that request (or to the book page when they came from a book link).

Navigation

POR-012 Landing and menu

After signing in the customer lands on the "Get quotes" form. The left menu has: the blue button "Quote"; "Quotes" (with a "+" that starts a new quote); "Shipments" (with a "+" menu, POR-053); "Invoices"; "Data"; and the customer's name and picture at the bottom (opens the profile). The logo at the top opens the quote form and shows 10-4's logo and name. There is no search, no queue block, no Customers, Carriers, Bills & Invoices, Reporting, Settings or Support. On a phone the menu opens from the top bar.

POR-013 Pages customers cannot open

Any page not in the menu list (settings, customers, carriers, reports, accounting, carrier documents and so on) shows the plain page "Something may have broke" / "The page you're looking for is missing." with the button "Back home". The data is refused too, so typing an address does not help. A customer sees only data of their own customer(s); another customer's shipment, quote or invoice looks the same as one that does not exist.

Quotes

POR-020 Quote form for customers

The customer uses the same "Get quotes" form as staff (section 4.6) with these differences:

- The customer and contact are filled in and cannot be changed (a person with several customers can choose among them).
- No vendor tools and no "+ add vendor".
- No truckload equipment choices: customers request LTL only; truckload work is a shipment request (POR-053).
- No product search and no customer address-book editor; saved addresses of their company are offered in the location box.
- The footer notes are always shown: "Pickup dates not guaranteed. Transit times and delivery dates are estimated." and, with sort & segregate, "Sort & segregate quoted price is a minimum. Final charge based on shipment and work performed."

- The yellow "no active carriers" banner is for 10-4 and never shows.
- "Get quotes" with an empty freight class shows "Choose a freight class"; the "Est: " chip helps.
- Requests can start from an earlier request (duplicate) and from a shipment.

POR-021 Automatic quotes or "Preparing quotes"

- If the account switch and the customer switch for "LTL auto-quoting" are both on, the request is rated at once, the page shows the rates as the carriers answer (about one minute) and the request counts as answered.
- Otherwise the request waits for staff. The page shows a rotating refresh icon, "**Preparing quotes**", "Please wait while we work on gathering quotes for this shipment. We'll email you when they're ready." and a dashed box "Quotes will show up here". The request appears in 10-4's "Quote" queue (POR-070). Staff rate it, share it (section 4.6), and the customer is e-mailed a link.
- The page refreshes itself while it waits.

POR-022 Results page for customers

The page shows "Quotes for " with the contact's name, the "+ Ref" editor, the "..." menu, the lane card, the tier tabs "All N", "Standard N", "Guaranteed N", "Volume N" (the tab chosen by staff), the quote cards and the footer notes. Customers never see: the "Sharing" bar, margin, cost, profit, hide/show eyes, "+ Add manual quote", "N carriers didn't return results", and the carrier's account. The footer keeps the button "Duplicate quote"; the "..." menu offers "Duplicate quote request", "Cancel quote request" and "Uncancel quote request" (POR-024).

- Quotes are visible only after 10-4 shares them or after the automatic search, and only if complete, not hidden by staff, and not manual "house quote" quotes. If staff choose "Stop sharing", the quotes disappear from the customer's page at once.
- A quote card shows the carrier logo and name (unless carrier names are hidden, POR-060), the service and transit time, a guaranteed icon where it applies and the price as a blue "Book" button showing the price ("Book this shipment for $X"). Expired quotes stay on the list with the button disabled.
- Footer: service notes, the pickup-date and liability notes (section 4.6) and the guarantee note.

POR-023 Banners for customers

Situation	Message
Pickup date passed	"Pickup date has passed." with "Choose a new date"
Holiday	"This date is a holiday for some carriers"
Old quotes	"These are old quotes" / "Changes were made during or after booking." and "See latest quotes"
Booking hold	"Booking disabled" / "Contact rep for more info"
No credit (only when "Enforce credit limits" is on, and no quote fits)	"No credit" / "Contact your broker to set up a line of credit before booking."

Situation	Message
Credit used up (only when "Enforce credit limits" is on)	"Insufficient credit" / "These quotes can't be booked because your credit limit has been reached. Please pay any outstanding invoices to continue booking."
Quote too expensive for available credit (only when "Enforce credit limits" is on)	Under the button: "Insufficient credit to book this quote"
Nothing found	"Your criteria didn't return any quotes." with "Edit criteria"
Booked	"Shipment booked from these quotes" with "View Shipment"

POR-024 What customers can change on their request

- Add or change the reference with "+ Ref".
- Edit the criteria (lane, items, date) with "Update quotes". Editing starts a new search with the same customer and contact; a request cannot be moved to another customer.
- "Cancel quote request" ("Are you sure you want to cancel this request?", "No, go back", "Yes, cancel") and "Uncancel quote request".
- "Duplicate quote request". A request made by 10-4 staff and not yet shared is not visible to the customer at all.

POR-025 Quote history for customers

"Quotes" lists the customer's own requests and the ones 10-4 has shared with them, in the same rows as staff (section 4.6): date, lane, weight, reference (for example "PO 12345"), mode and the status glyph with the texts "waiting for broker to respond" and "quotes available". No Customer or Rep filter. Empty: "No quote requests."

Booking

POR-030 Book page for customers

Clicking the price opens the book page, the booking form of section 4.6 with these differences:

- Title "Book shipment", the box "Custom BOL #", and the line "Quoted ago by ".
- The customer card is fixed. The contact is the signed-in person.
- The "Carrier" card shows the quoted service, transit and carrier name (or 10-4's name when carriers are hidden) and the link "Change carrier" (back to the quotes). No cost, margin or vendor section.
- The lane cannot be changed. The customer completes, for each stop, the company, street, contact name, phone, e-mail(s), open and close times, instructions, reference numbers and the date; for the items, the description, commodity and declared value. The "Share BOL" switches are not shown.
- A "Price" block shows the service, carrier, transit and "Price $X", and the box "Total value".
- Notes: "The quote was based on the details provided. The final price may be different if the shipment details change." and the two pickup-date and liability notes.
- The button reads "Book for $X".

POR-031 Customer Terms & Conditions

A card with the link "Customer Terms & Conditions" and the box "I have read & agree" appears on the book page. The box is required: if empty, the page shows "Please agree to the terms". The link opens 10-4's document (a web address in a new tab, or a window with the terms text). If 10-4 has not set a document yet, the label is plain text. The date and version of the terms agreed are saved on the shipment.

POR-032 Booking checks

The checks of LTL-075 (section 4.6) run for customers, except the margin and profit rules: request canceled, already booked, quote no longer available, pickup date in the past, booking hold, quote expired or expiring before pickup, and, only when "Enforce credit limits" is on, credit. A request that staff made and did not share cannot be booked by a customer.

POR-033 What happens at booking

- The shipment is created and booked at once; a green message "Shipment booked" shows and the customer lands on the shipment page.
- It is marked as booked by the customer and records the terms accepted and the customer contact. The customer's main rep is set as the booking rep.
- It appears in 10-4's "Dispatch" queue (LTL) for staff.
- If both auto-dispatch switches are on, the system sends the pickup request to the carrier (LTL-080); otherwise staff dispatch it.
- A double click or a repeated send does not create a second shipment.

POR-034 Booked shipment after booking

The shipment page opens (POR-041). The results page shows the booked quote and "View shipment".

POR-035 Booking hold and credit

- A customer with "Enable booking" off cannot book; the book buttons are disabled and the bar "Booking disabled" / "Contact rep for more info" shows.
- Only when the Owner setting "Enforce credit limits" is on (off at go-live; PAY-022), a quote whose price is above the customer's available credit cannot be booked. With it off, credit never stops a booking. Customers never see credit amounts, only the messages in POR-023.

POR-036 Auto-dispatch for customer bookings

The pickup request is sent automatically only when "LTL auto-dispatching" is on for the account and for the customer; the staff switch "Auto dispatch" on the staff book form is a separate default.

Shipments, tracking, documents

POR-040 Shipments list

"Shipments" lists the customer's own shipments in a flat list with the filters Status, Pickup date, Delivery date, a search box and (only for a customer with several companies) Customer. Rows show BOL number, status,

dates, lane, customer, carrier (hidden when carriers are hidden) and price; no cost or profit columns. Search finds shipments by BOL, customer, contact, stop and reference text, not by carrier, driver, pickup number or internal notes. Empty: "No active shipments" with "Switch to all shipments". The "Export" button downloads a CSV with BOL #, Status, Pickup date, Delivery date, Origin, Destination, Reference numbers, Price and, when carriers are shown, Carrier name.

POR-041 Shipment page for customers

The page title is the BOL number. It shows:

- Header buttons "BOL" and "Labels" (once booked). No edit button and no staff "Documents" page.
- Status.
- A carrier card: carrier logo, name, service and transit time, or 10-4's name and service when carriers are hidden. For truckload shipments the card shows 10-4's name.
- The customer card, the price (read-only), pickup and delivery estimates and transit days. No Reschedule button.
- The stops with company, address, window, instructions, contact and tracking times (POR-042).
- The items with totals (value, count, volume, density, length, weight) and a hazmat contact if any.
- Footer notes, the link "Customer Terms & Conditions", and the block **"Questions?"** with the name, company and address of the 10-4 rep and the buttons "Call" and "Email". The page refreshes on its own while the shipment changes.

POR-042 Tracking for customers

There is no separate tracking page. The shipment page shows, for each stop, the estimated arrival, arrived, picked up and delivered times; a map with the route; and for LTL the PRO number (when known) and a "Track" link to the carrier's own tracking page once the pickup has happened. Not shown: driver details and chat, internal notes, the timeline, rate confirmations and cost.

POR-043 Documents for customers

Document	How the customer gets it
BOL	Header button "BOL". If not ready yet a spinner shows; the customer can press the explicit "generate" button. File `BOL-<BOL number>.pdf`.
Labels	Header button "Labels"; size list "Half-letter" / "4×6"; button "Download labels"; file `Labels-<BOL number>.pdf`.
Proof of delivery	"View POD" on delivered loads.
Customer invoice	From "Invoices" (only invoices already sent).
Customer statement	"Download statement" on "Invoices".

Document	How the customer gets it
Carrier rate confirmations, carrier bills and other uploaded documents are never available. Opening a page never creates a document; BOL and labels are created only when the customer clicks the button (or at booking).	

Invoices, data, profile

POR-050 Invoices page

"Invoices" shows, for the customer (buttons for each company if several): an aging bar with five parts "Current", "1-15 late", "16-30 late", "31-60 late" and "61+ late" (each with the invoice count); invoice cards (invoice number, month, balance, "Due ", and the status Open, Late or Paid); and the totals "Not Invoiced $X (N shipments)", "Open $X (N invoices)", "Late $X (N invoices)". A card opens the invoice (read-only, no dispute, send or payment). Invoices 10-4 has not sent are not shown. Empty: "No invoices" with the tiles "Not Invoiced $0", "Open $0", "Late $0".

- "Download statement": the latest statement, or a fresh one.
- "Download CSV": file `<customer-name>-open-invoices.csv` with Customer, Customer Invoice Number, PO Number, BOL, Origin City/State/Postal Code, Destination City/State/Postal Code, Carrier Name (empty when carrier names are hidden), Customer Invoice Total, Customer Invoice Balance Due, Customer Invoice Due Date, Customer Invoice Date, Aging, Customer Invoice In Dispute. Disabled when the list is empty.
- No "Pay" button; customers pay 10-4 outside the portal (ACH or check).

POR-051 Data page

"Data" shows the lanes map and table for the customer's shipments ("Lanes", "Pickup this week", Origin / Destination / Shipments, "No matching lane data", "Reset filters", "Totals"). The Profit columns and the filter window are not shown to customers.

POR-052 Customer credit view

A customer sees only the credit messages in POR-023; other credit details stay with staff.

POR-053 Truckload shipment request

The "+" next to "Shipments" opens a small menu: "Quote" (opens the LTL form) and "Shipment". "Shipment" opens a request form: the customer is fixed, the equipment list is the truckload list (Dry Van by default) with "Partial", "Tanker endorsement" and "Team service", the stops (2 to 10), the items (description, quantity, packaging, weight, size, hazmat, commodity), "Total value", and the note "Pickup, transit and delivery dates are estimated." No vendors, cost, carrier or reps. The button is "Save shipment". The request is saved as a requested shipment and lands in 10-4's **"Finish booking"** queue where staff price and book it (section 4.2). The customer sees it in "Shipments" with the status "Requested". Changing a request is done by calling the rep (the "Questions?" block).

POR-054 Profile

The profile page shows the avatar (the customer can upload a picture), the badge "Customer", First name, Last name, Email (read-only), Phone, "Save" and "Log out". No "Change password" (customers have no password) and no team block.

What staff see

POR-070 What lands in 10-4's queues

What the customer does	Where staff see it
Asks for LTL quotes and the search is not automatic (or the request is not answered yet)	Left menu queue "Quote" (hidden when empty), page "Shipments to quote", and the dashboard.
Asks for LTL quotes with automatic quotes on	"Quotes" list (already answered).
Books an LTL quote	"Dispatch" queue, the shipment list, and the quote request shows "Shipment booked from these quotes".
Sends a truckload shipment request	"Finish booking" queue (status "Requested", customer request).
Cancels a request	The request shows "Canceled" with " made this request".
The shipment shows who booked it (the customer contact) and that it came from the customer.	

What is hidden from customers

POR-060 Carrier names

When the account option "Reveal carrier names" is set to hide carriers, customers see the delivery date block instead of the carrier logo and name on quotes, in the shipments list and on the shipment card (which shows 10-4's name and the service). The invoice CSV leaves the carrier column empty. The BOL still names the carrier.

POR-061 Never shown to customers

Cost, margin, profit, markup; the carrier account used; vendors; carrier contacts and rate confirmations; carrier bills; reps and commissions; internal notes; the timeline; driver and tracking-provider details; quotes hidden by staff; quotes staff have not shared; credit limits and amounts; documents other than those in POR-043; manual "house" quotes.

POR-062 Live updates

Customer pages update on their own, for the customer's own items only. The results page shows new quotes as they arrive; the shipment page shows new status, tracking times and documents (BOL and labels buttons change from a spinner to the file when ready); the invoices page shows new invoices. Secure-link pages: LNK-005, LNK-011, LNK-027.

4.11.2 Secure links

What a secure link is. An address in an e-mail that opens exactly one page without signing in, through a private part that cannot be guessed and is saved with the e-mail so staff see when it was sent and opened. It cannot reach any other page. All secure pages show 10-4's logo and name at the top and, where it fits, a "Questions?" block with the rep's name, company, address and the buttons "Call" and "Email". Pages are marked so search engines do not list them.

LNK-001 Links are per recipient

The system will create one link per e-mail address. Sending again to the same address reuses the link, renews its 42 days and sends a new e-mail. Each send is recorded with its time, delivery state and open state so staff can see "sent", "opened" and "Failed to send" in the sharing windows.

LNK-002 Expiry

A secure link works for 42 days from the day it was last sent (each new send gives a fresh 42 days). After that, or if staff remove the share, or 10-4's account is disabled, the page shows the plain blue panel (LNK-003). The portal login link is different: 15 minutes, once (POR-007). The carrier rate confirmation link follows these rules too (LNK-023).

LNK-003 One "not found" answer

For every secure page, a link that is wrong, expired, removed, for another page, or damaged shows a full-screen blue panel with a title and a short text and no button: "Quote request not found" / "Quote request does not exist or is not publicly shared." (quotes); "Shipment not found" / "Shipment does not exist or is not publicly shared." (shipment, labels, invoice); "Carrier packet not found" (carrier packet). The panel never says why, so a guessed address reveals nothing. While loading the pages show "Loading quote request", "Loading shipment", "Loading invoice".

Quote link

LNK-004 Where the link comes from

Staff share quotes from the results page (section 4.6): "Share quotes" or "Email quotes" e-mails a "View quotes" button with this link to each address; "Copy link" gives a view-only link (LNK-006). Stopping the share removes the e-mailed links and the view-only link at once.

LNK-005 Quote page (e-mailed link)

The page title is "Quote Request #" (or "Quote Request"). It shows:

- 10-4's logo and name, and the button "Customer login" (only when the account and the customer have portal login on). It signs the customer in and returns to the full results page.
- "Quotes for "; the contact on the left; "Ref " on the right; and, only when "Enforce credit limits" is on, a credit chip ("Credit available $X" or "No credit").
- The yellow banner "These are old quotes." / "Changes were made during or after booking." with "See latest quotes" when the request was changed after booking (one banner only). The link follows the request

to its latest version.

- The read-only lane card (no pencil).
- The yellow banner "Pickup date is in the past" / "Contact your broker to update the pickup date." when the date has passed.
- "Sorry, no quotes available" when there are none.
- The quote groups (by delivery date if carrier names are hidden, otherwise by carrier). Only complete, visible quotes are listed, sorted by price, with the tier tab staff chose. Cards show the price only. Expired quotes show with the button disabled.
- Footer notes: "Pickup dates are not guaranteed. Transit times and delivery dates are estimated and typically exclude weekends, holidays and the pickup date.", and for LTL the liability and 5pm-guarantee notes.
- The "Questions?" block; its e-mail button opens a mail with the subject "Re: Quote from to ()".
- The page refreshes itself while quotes arrive.
- A canceled request shows the "not found" panel.

LNK-006 View-only link

The "Copy link" link opens the same quote page without the private part. Anyone with it sees the quotes but there is no "Book" button, only the price; no credit chip, no link to a shipment and no "See latest quotes". It works only while the request is shared and not canceled. View-only sharing is switched on when the link is copied and off when staff stop sharing.

LNK-007 Booking from the e-mailed link

When the link has its private part and no shipment exists yet, each quote has the blue "Book" button with its price (disabled for expired quotes, a booking hold or, only when "Enforce credit limits" is on, insufficient credit with the message "Insufficient credit to book this quote"). If a shipment already exists, the card opens the shipment page instead (LNK-009). A link made for another request gives nothing extra.

LNK-008 Book from a link (page)

Clicking "Book" opens "Book Quote Request #": the portal booking form (POR-030) with customer card, stops, items, the quote card with the previous quote, the terms box "I have read & agree", the note "The quote was based on the details provided. The final price may be different if the shipment details change." and the button "Book for $X". The "Customer login" button is shown at the top. The booking uses the request's contact; if none, the contact whose e-mail matches the one the link was sent to; if none, no contact.

LNK-009 After booking from a link

The short pop-up message "Shipment booked" shows and the customer is taken to the shipment page (LNK-011), which opens with the same link. If the request already has a shipment, the book page opens the shipment page directly. A missing request or quote shows "Error loading quote request" / "The quote request you're looking for is missing." with "Quote again". Booking checks, terms rule and hold rules are those of POR-032.

Shipment page (BOL share)

LNK-010 Where the link comes from

The "BOL" e-mail goes to the stop contacts whose "Share BOL" switch is on (pickup contact on, delivery contact off by default), when a shipment is booked, when staff press the circular "resend BOL" icon beside a stop, or when a stop's e-mail is edited with "Send updated documents" on. Each recipient gets one e-mail with links to the BOL and the labels (sections 5 and 6). The shipper at a third-party warehouse gets the BOL and labels, not the customer.

LNK-011 Page content

The page title is "Shipment BOL #". It shows:

1. 10-4's logo and name.
2. A card "Shipment for " with the reference number on the right.
3. A green status banner: "Shipment scheduled" (or "Shipment delivered" once delivered). Under "scheduled" it says, where it applies, "The bill of lading will be sent to the origin and destination contacts." (or origin, or destination only).
4. Buttons: "View POD" once the load is delivered and a POD exists; otherwise "BOL" and "Labels".
5. The equipment line (equipment or mode, service, transit days, temperature range) and, when carriers are hidden, 10-4's logo instead of the equipment icon. The carrier's name and logo are **not** shown.
6. "Locations" with the services row ("Services:") and each stop: type, company, address, date and window, contact, instructions, and tracking times.
7. "N item(s) to be shipped": item cards, a red "Hazmat contact" / "Contract #" / "Emergency #" panel when hazmat, and the totals (refrigeration range, count, volume, density, length, weight). No value.
8. Notes: service notes, "The quote was based on the details provided. The final price may be different if the shipment details change.", the date and guarantee notes, and the link "Customer Terms & Conditions".
9. "Questions?" Never shown: price, cost, invoice, balance, carrier name, map, internal notes, reps, timeline. The page refreshes while the shipment changes. A draft shipment is not shown.

LNK-012 BOL button

"BOL" downloads the BOL (`BOL-<BOL number>.pdf`). If not yet created, a button creates it on demand with a spinner until ready. Viewing the page never creates anything.

LNK-013 Labels page

"Labels" opens the labels viewer with the header "Labels", a close X back to the shipment page, the list "Size" ("Half-letter" default, "4×6"), thumbnails of the label pages and the button "Download labels" (`Labels-<BOL number>.pdf`). If no label of that size exists, an explicit button creates it. Changing the size shows the other size if it exists.

LNK-014 Proof of delivery

After delivery, "View POD" opens a viewer with the proof-of-delivery documents. The recipient cannot remove or upload documents.

LNK-015 Link from a quote link

A booked quote link also opens the shipment page (LNK-009).

LNK-016 Shipment page without a private part

A shipment page cannot be opened from a view-only quote link. It needs its own e-mailed link.

Invoice page

LNK-020 Where the link comes from

Customer invoices are e-mailed when staff press "Send invoice" (section 4.5), and an invoice can be shared separately with chosen contacts. The e-mail contains a link to the invoice.

LNK-021 Page content

Title "Invoice #". 10-4's logo; the heading "Invoice " with "for " (plain text), the contact name and "REF "; a "Download" button (`Invoice-<reference>-from-<10-4 name>.pdf`); the invoice PDF in a viewer; and, when proof of delivery exists, the heading "Proof of Delivery" and its viewer. A footer with 10-4's name, billing contact, address and the buttons "Call" and "Email". No amounts are shown outside the PDF.

LNK-022 Updated invoice

If the invoice was changed after it was sent, the page shows an orange card "Invoice has been updated" / "An updated copy will be shared with you via email" and the old copy is no longer downloadable. A failed download shows "Unable to download the invoice. Please try again."

Carrier links

LNK-023 Carrier rate confirmation link

The rate confirmation e-mail to a carrier contains a link to the rate confirmation page where the carrier reviews the load, signs and accepts. The page, signing steps, carrier terms viewer ("carrier agreement") and what happens after signing are in section 4.3. The link rules are those of LNK-001 to LNK-003: one link per recipient, "Shipment not found" for a wrong, removed or disabled link. A link already used shows the "Load accepted" page, not an error. The carrier never sees price, customer or internal data beyond the rate confirmation itself.

LNK-024 Carrier packet link

When 10-4 asks a carrier for its latest packet (carrier page, section 4.8; also when covering with "Cover & request packet"), the carrier gets an e-mail with a link to a short guided page "<10-4 name> wants your latest carrier packet". The link is tied to that carrier and to the one packet request.

LNK-025 Packet steps

Step	What the carrier sees and does
Intro	Three rows "Upload documents" (Authority/permit, insurance, W-9, and factoring), "Fill out insurance" (Tell us your coverage amounts and expiration date), "We'll review your packet" (Shipments will be assigned once we review and approve your packet.). Small print: "By clicking the Continue button below, you are agreeing to the <10-4 name> terms and conditions." Button "Continue".
Authority	"Is this information correct?" with the carrier's legal name, USDOT number, MC number(s), tax id, phone and address. If shipments are waiting: " shipment(s) waiting" / "We need to review the carrier packet before we can release the rate con(s)." Buttons "Yes, this is me" and "This is not me".
Upload	Previously sent files (by name) and new files; "Upload file" / "+ add file" and "Done". Error banner "Error uploading documents". Only the carrier's own folder accepts files; allowed types and sizes follow section 6.
Insurance	Heading "Tell us about what insurance you have". Fields: General Commercial Liability each occurrence, Automobile Liability combined single limit, Motor Truck Cargo, Earliest expiration date. A list "Uploaded documents". Button "Save".
Thank you	"Thanks for sending us your carrier packet" / "We'll review your packet and get back to you." with "Back home".
Help	"This is not me" shows "Did we get something wrong?" / "Give us a call and we'll get things fixed." and a call button with 10-4's phone, and "Back home".
A completed packet can be sent again. Any load error shows "Error loading Carrier Packet". Staff review is in section 4.8.	

LNK-026 Carrier terms link

A link to the carrier terms ("carrier agreement") opens a page showing 10-4's carrier terms (a PDF or the terms text). See section 4.3.

LNK-027 Rules common to every secure page

- The page shows only an explicit allow-list of fields for its purpose. A field added to a staff screen later does not appear on a secure page by itself.
- Every action on a secure page is checked against the link, not only on the screen.
- The quote page and the shipment page update on their own while the request or shipment changes. The invoice page and the carrier packet pages load once; reload to see changes.
- A secure page cannot change the rate, price, customer or other core data; it can only write: booking a quote (quote link), creating a BOL or labels on request (shipment page), signing (rate confirmation) and the carrier's packet.
- Secure pages record who did it as "the link recipient" (not a staff member), so the shipment timeline reads clearly.

- Too many requests from one address in a minute show a "too many requests" answer.

LNK-028 Turning links off

What staff do	Effect
"Stop sharing" on a quote request	All quote links for it and the view-only link stop.
Remove a share (BOL, invoice, rate confirmation)	That recipient's link stops.
Cancel a quote request	The quote links for it stop (not found).
Disable the account	Every secure link stops.
Wait 42 days	The link expires.

LNK-029 Resend

Staff can send a link again: the circular "resend BOL" icon, the BOL page's "Send" / "Resend", "Email quotes" in the sharing window, the invoice share window, and the resend control on the rate confirmation.

LNK-030 Password reset link

The link in the password-reset e-mail is a secure link of a different kind: it works for 60 minutes and once, and stops working if the password or the login e-mail changed in the meantime. See section 4.10.

Who can do what

Action	Owner	Member	Customer	Carrier / recipient
Turn on portal login for the account and customers	Yes	Customer switches: yes; account switches: Owner only	No	No
Copy the customer login link	Yes	Yes	No	No
Run quotes and book in the portal	Yes (as staff, section 4.6)	Yes	Yes, own company only	No
Share quotes, copy the view-only link, stop sharing	Yes	Yes	No	No
Open a quote link	Yes	Yes	Yes	Yes, anyone with the link
Book from a quote link	Yes	Yes	Yes	Anyone with the e-mailed link (not the view-only link)
Open a shipment or invoice link	Yes	Yes	Yes	Yes, with the e-mailed link
Sign a rate confirmation	No	No	No	Yes, carrier with the link

Action	Owner	Member	Customer	Carrier / recipient
Send a carrier packet	No	No	No	Yes, carrier with the link

4.12 Notifications and Live Updates

> **In short:** The system keeps every open screen up to date without reloading. When one user changes a shipment, a quote, a document or a payment, everyone else looking at it sees the change within seconds. In-app alerts are simple: count badges on the sidebar queues, short pop-up messages after an action, status marks on shared items, and one small notification settings window. E-mails are covered in section 5.

Sidebar badges and counters

NTF-001 Queue count badges

Broker users see an orange count badge on each work queue in the left sidebar. A row is hidden when its count is 0.

Sidebar row	Counts	Opens
Finish booking	Customer requests that need a booking finished	Shipments list (section 4.2)
Quote	Quote requests that need to be finished	Quote history (section 4.6)
Dispatch	LTL loads waiting for a pickup request	Shipments list (section 4.2)
Cover	Booked truckload loads without a carrier	Shipments list (section 4.2)
Confirm pickups ("Confirm pickup" when the count is 1)	Scheduled loads with a pickup date before today	Section 4.4
Confirm deliveries ("Confirm delivery" when the count is 1)	In-transit loads with a delivery date before now	Section 4.4

- The block of queues shows when at least one queue has a count above 0. The "Confirm deliveries" row shows whenever its own count is above 0.
- Screen readers hear, for example, "Cover 53 outstanding tasks".
- Clicking a queue re-checks its count.
- Customers (portal users) and carriers never see these badges.

NTF-002 When the counts refresh

Counts are re-checked when any shipment, quote or carrier changes (by anyone), when the connection is restored, and when the user moves to another page. The clock does not change counts: a load whose pickup date passes at midnight enters "Confirm pickups" at the next refresh.

Live updates

NTF-010 Live connection

After sign-in, each browser tab keeps a live connection, private to the signed-in company account. It closes when the user signs out, changes their password (all other sessions close), is removed from the account, or the sign-in session expires. The browser reconnects automatically, waiting longer after each failed try (1 to 15 seconds).

NTF-011 What refreshes when someone else changes something

When a change is saved, every other open screen showing that item is refreshed with the latest saved data. Nothing is pushed into a screen without being re-checked, so users never see data they are not allowed to see.

Change by another user or by the system	What refreshes on your screen
Shipment created, booked, edited, covered, canceled, un-canceled	Shipment page, shipments list, queues, badges, timeline
Carrier assigned or removed, rate confirmation sent or signed, driver details changed	Shipment page, carrier card, driver strip, tracking pill
Tracking event, pickup, delivery, appointment, tracking status change	Stop cards, tracking log, queues, badges
Document uploaded or removed (POD, bill, other)	Documents page, shipment page
Quote request shared, stopped, canceled or finished	Quote results, quote history, customer portal quote list
Invoice created, sent or changed; carrier bill changed	Invoice and bill pages, Bills and Invoices lists and tab counts
Payment recorded, applied, un-applied or deleted	Payments lists, invoice and bill pages, customer credit and usage
Customer credit limit or credit report changed	Customer page, credit usage
Contact added, changed, removed or verified	Contact lists
Carrier packet or compliance documents changed	Carrier page, approval list
Share opened or failed	Share windows and share status marks (NTF-020)
Terms changed	Terms pages

NTF-012 Shipment timeline

The timeline on the shipment page gets the new line as soon as it happens (section 4.2).

NTF-013 Open forms are never overwritten

A live update never replaces what a user is typing. The edit shipment form and the Cost and Price editor keep the data they opened with. If someone else saved a change meanwhile, saving shows "Previous changes detected" with a **Reload shipment** button, and the user decides.

NTF-014 Quote results stream in

While LTL carriers answer a quote request, each answer appears on the results page as it arrives. A final message says all carriers have answered, which ends the "Preparing quotes" state and, if nothing came back, shows "Your criteria didn't return any quotes". Duplicate quotes are tidied before display (section 4.6).

NTF-015 Documents ready

When a generated PDF is ready (BOL, labels, customer confirmation, carrier rate confirmation, invoice, customer statement), the button switches from a spinner to the file. Customers on the portal see their BOL and labels buttons switch the same way. See section 6.

NTF-016 If the connection drops

While the connection is down, pages that wait for a result (quote results, shipment page while a driver start is pending, invoice PDF) ask for fresh data every few seconds (about every 2 seconds on quote results, every 3 on the shipment page). When the connection returns, the open page, lists and counts refresh once.

NTF-017 Customers and share pages

- Customers in the portal get live updates only for their own shipments, quotes and invoices, never for costs, margins or other customers.
- Secure-link pages refresh themselves: the quote page shows new quotes as they arrive, and the shipment page follows shipment changes (LNK-005, LNK-011).
- The invoice page and the carrier packet page opened from a link load once; reload to see changes.

NTF-018 Recently visited

Customer, carrier, vendor, shipment and quote pages a user opens are remembered per user (last five of each kind) and offered in Find (section 4.1).

Share status marks

NTF-020 Opened and failed marks

Wherever a document is shared by e-mail (BOL, rate confirmation, invoice, quote, carrier packet), each recipient shows a live status. Section 5 explains what causes each state. For the carrier rate confirmation, only "Resend" after a failure is shown (RCF-005).

Mark	Meaning
"Unopened" (grey)	Sent; the recipient has not opened the link.

Mark	Meaning
"Opened" (green check)	Opened. Hovering shows when.
"Failed to send" (red)	The e-mail could not be delivered. Hovering lists the reason (for example dropped, deferred, bounced, blocked).
Pending	Still being sent.

Messages

NTF-030 Short confirmation and error messages

After most actions a short plain-text message appears for a few seconds in the lower part of the screen. Errors on a form are also shown in a red banner. Other screens list their own messages in their sections.

Area	Messages
Tracking events	"Saved tracking event", "Updated tracking event", "Deleted tracking event" (with Undo), "Failed to save the event. If you have an ad blocker, disable it and try again."
Appointments	"Appointment saved", "Failed to save appointment", "Appointment removed", "Failed to remove appointment"
Driver details	"Error updating driver details"
BOL	"BOL shared", "Failed to send BOL"
Invites	"Invite resent!"
Quote sharing	"Error sharing" (banner)
Invoices	"Unable to download the invoice. Please try again."
Copy buttons	A short confirmation for 1.5 seconds after copying a phone number or e-mail
E-mail could not be queued	"E-mail could not be queued."

NTF-031 Undo

Some messages carry an **Undo** link (deleting a tracking event, deleting a note, and similar). Undo restores the item.

NTF-032 Confirmations before risky actions

Actions that send an e-mail to someone outside the company or revoke access ask first, for example "Stop sharing these quotes?" with "The customer will no longer see these quotes." and the buttons **Not now** and **Stop sharing**.

Notification settings

NTF-040 Notifications window

Settings (section 4.10) has a tile "Notifications" with the text "Manage in-app alerts". It opens a small window titled "Notifications" with the line "Choose in-app notification alerts to receive:". Each setting is a switch that saves when flipped; there is no Save or Done button. Click outside the window or press Esc to close it.

NTF-041 Sources in the first version

The window shows a grey box with "No sources configured", because no in-app alert source is switched on for 10-4. There are no per-user e-mail notification settings. Company-wide e-mail recipients (Cc lists for invoices, credit request recipients) are set in Settings (section 4.10).

NTF-042 No notification inbox

There is no bell icon, notification inbox or unread count in the first version. Alerts that need action show as queue badges (NTF-001), warnings on the shipment page (section 4.4) and the dashboard (section 4.1).

Who can do what

Action	Owner	Member	Customer	Carrier
See queue badges	Yes	Yes	No	No
Get live shipment, quote, document and payment updates	Yes	Yes	Own items only (portal and secure-link shipment and quote pages)	No (carrier link pages load once)
Open the Notifications window	Yes	Yes	No	No
See share status marks	Yes	Yes	No	No

5. E-mails

> **In short:** Every e-mail the system sends: trigger, recipient, content, attachments, resending and failure handling. The three day-to-day messages are the BOL and labels to the shipper, the rate confirmation to the carrier, and the invoice to the customer. This section is the home for e-mail contents; other sections point here (EML IDs).

How e-mail works in the system

EML-001 One e-mail per recipient, with a secure link

Every e-mail to someone outside the company goes to each recipient separately, with its own secure link that works without signing in (life, renewal and revoking: LNK-001 to LNK-003; section 4.11). Links in sign-in e-mails expire sooner (see the catalogue).

EML-002 Sender, reply-to and Cc

- The sender is the system's company address, with the company name in the display name.
- Replies go to the person who sent the message (BOL, invoice, packet request, invite). For the rate confirmation, replies go to the reply-to address in Settings, Carriers ("Rate confirmation" settings), else to the user who covered the load. Sign-in and verification e-mails have no reply-to.
- Invoice e-mails also go to the company's "Cc invoices" addresses (Settings, Accounting).

EML-003 Delivery status

Each send has a status visible where the item is shared: Pending (being sent), Sent, or Failed. When delivery information is available, the screen also shows "Unopened", "Opened" (with times) or "Failed to send" with the reason (section 4.12, NTF-020).

EML-004 Failure handling

- If the mail service does not accept a message, the system tries again up to three times with a growing wait (30 seconds, then longer). After the third failure the send is marked "Failed to send" with the reason.
- The business action is not undone: a booked load stays booked and a sent invoice stays sent; only the e-mail is marked failed. The user sees a message such as "Failed to send BOL" and can send again.
- If the system cannot even queue a message, the user sees "E-mail could not be queued." and can try again.
- A message to a person who no longer exists, a canceled invoice, or a customer with nothing to bill fails at once, without further tries.
- A message is never sent twice by accident: a retry sends only if the earlier try did not go out.

EML-005 Attachments and links

BOL, rate confirmation, invoice and statement e-mails carry the PDF as an attachment and a link to the secure page. Documents are produced when the e-mail is sent. PODs are attached to the invoice e-mail as separate files per the customer setting "Combine PDFs (bill and POD)" (CUS-015, DOC-012). Nothing is merged into one PDF, and the BOL is not attached to the invoice e-mail.

EML-006 Wording and review

Subjects and texts below are the wording the system will use; 10-4 can supply different wording for any message.

Catalogue at a glance

#	E-mail	Sent to	When	Day-to-day
1	BOL and labels	Stop contacts	Booking, resend, after edits	Yes
2	Rate confirmation	Carrier dispatcher	Carrier assigned	Yes
3	Signed rate confirmation follow-up	Carrier dispatcher	After the carrier signs	Yes
4	Updated rate confirmation	Carrier dispatcher	After a change, if chosen	Sometimes
5	Invoice	Customer billing contacts	Invoice sent	Yes
6	Invoice shared with another contact	Chosen contacts	Invoice "Share"	Sometimes
7	Customer statement	Customer billing contacts	"Send statement"	Sometimes
8	Quote share	Customer contacts	"Send email" in quote sharing	Sometimes
9	Carrier packet request	Carrier contacts	Packet requested	Sometimes
10	User invite	New user	Owner invites	Sometimes
11	E-mail address verification	New login address	User changes login e-mail	Rare
12	Password reset	User	"Forgot password?"	Rare
13	Customer portal sign-in link	Customer contact	Customer asks to sign in	Often (customers)

BOL and labels

EML-010 BOL and labels to the stop contacts

When a load is booked from the booking form, one e-mail goes to each e-mail address on each stop where "Share BOL" is on (stop 1 is on by default; the address book remembers each contact's choice). Duplicate

addresses get one e-mail. If no stop has such an address, nothing is sent. Reply-to is the user who booked.

Item	Content
Subject	"BOL from "
Body	An optional message, then "Download BOL" and "Download labels" links.
Attachments	The BOL PDF and the labels PDF.
Links	Secure shipment page (BOL, POD) and secure labels page (labels in half-letter and 4×6).
Customer rate confirmation	Not attached (staff send it separately, section 6).

EML-011 Sending the BOL again

- The **Resend BOL** icon on each stop card sends the BOL again to that stop's addresses (section 4.4). Message "BOL shared"; failure "Failed to send BOL".
- The BOL page has Send and Resend (section 6).
- When a booked load is edited, the "Send updated documents" panel shows a BOL row (switch **on** by default) listing who will be e-mailed. Sent after the first time, the e-mail carries "The BOL for this shipment has changed. Please disregard previous BOL."
- With no BOL contacts: "No BOL contacts to send to."
- A canceled load's BOL is not re-sent.

Carrier e-mails

EML-020 Rate confirmation to the carrier

Trigger: the carrier is assigned with "Cover & send rate con" (an approved carrier, or an Owner override; section 4.3), or the rate confirmation is released after the carrier is approved, or a user shares it again.

Item	Content
Recipient	The carrier dispatcher chosen on the cover form (contact name and e-mail required). More contacts can be added in the rate confirmation Share window.
Subject	"Confirm Load "
Body	" sent you a rate confirmation for load : <origin city, ST> to <destination city, ST>, pickup ." An optional note ("Note: "). A button "View rate confirmation". Footer: "Please review the rate confirmation, add the driver details and sign."
Attachment	The carrier rate confirmation PDF "Carrier-Rate-Con-.pdf".
Link	Secure rate confirmation page where the carrier reads the terms, enters driver details and signs.
Reply-to	The rate confirmation reply-to in Settings, else the user who covered the load.

EML-021 Held rate confirmations

While a carrier needs approval, the rate confirmation is held and not sent. When an Owner approves the carrier, it is sent. For a blocked ("Don't use") carrier, only an Owner can turn on "Override coverage status"; the rate confirmation then goes out at once. A Member cannot override. Until then the message is "Rate con will be sent when you approve this carrier". With "Cover & request packet" the packet request goes first (EML-050). Plain "Cover" (new carrier, packet request off) sends no e-mail.

EML-022 Follow-up with the signed rate confirmation

Trigger: the carrier signs and a carrier agreement applies and was agreed to (section 4.3). Then the carrier page shows "Thanks, we'll send you a followup email with the signed agreement."

Item	Content
Recipient	The same dispatcher.
Subject	"Signed rate confirmation "
Body	"Thanks for confirming load . The signed rate confirmation is attached." and a "View rate confirmation" link.
Attachment	The signed rate confirmation PDF (the version the carrier signed).
Reply-to	As in EML-020.

EML-023 Updated rate confirmation

Trigger: after a change to price, terms, dates, appointment or pickup number on a signed load, with "Send updated Rate con" on. The switch is **off** by default and, when shown, a hover list tells who will be e-mailed. Same format as EML-020; the link page lists what changed and has a **Confirm changes** button. The rate confirmation returns to "draft" until the carrier confirms.

EML-024 No e-mail to a dropped carrier

Removing a carrier from a load sends no e-mail. The old link shows "Shipment no longer available."

EML-025 Driver tracking link

The text message with the Trucker Tools app link goes to the driver from Trucker Tools, not from the system (section 4.4).

EML-026 Carrier paperwork mailbox

The default rate confirmation terms ask carriers to send BOL, invoice, rate agreement and POD to 10-4's accounting mailbox. The system does not read that mailbox.

Customer e-mails

EML-030 Invoice

Trigger: **Send invoice** on the invoice page, or the bulk **Send invoices** window (section 4.5). Send is blocked until the load is picked up, and until a required POD is uploaded.

Item	Content
Recipients	The customer's billing e-mail addresses. If none exist, the window asks for them; the typed address is saved to the customer only after the user chooses to save it ("Saved as the customer's billing email.").
Cc	The company's "Cc invoices" addresses.
Subject	"Invoice from "
Body	" sent you invoice for BOL ." "Amount due: $X". "Due by <MM/DD/YYYY>". The message the user typed (up to 2,000 characters). A "View invoice" link.
Attachments	The invoice PDF; the POD as separate file(s) per "Combine PDFs (bill and POD)" (DOC-012). The BOL is not attached; nothing is merged.
Link	Secure invoice page with the invoice and POD.
Reply-to	The user who sent it.

- One send per address; pressing Send twice or a network retry does not send a second e-mail. Resending is a deliberate action ("Resend").
- Failure: the invoice is still marked sent; the failed address shows "Failed to send".

EML-031 Invoice shared with another contact

Trigger: **Share** on the invoice page. The invoice must be sent first (otherwise "Send the invoice first"). Same content as EML-030.

EML-032 Customer statement

Trigger: **Send statement** on the customer's Invoices tab, with the line "Send an email with statement to ".

Item	Content
Recipients	The customer's billing e-mail addresses. If none: "Add a billing email address".
Subject	"Statement from "
Body	"Please find attached your statement of open invoices." and the company name.
Attachment	Statement PDF listing sent, unpaid invoices with a balance, generated when sent and always current.
After sending	The card shows "Last sent by ".

A customer with no open invoices, or an archived customer, gets no statement (the user sees an error).

EML-033 Quote share

Trigger: **Send email** in the quote Sharing window (section 4.6).

Item	Content
Recipients	Customer contacts (contact's e-mail pre-filled) plus added addresses.
From / reply-to	The sending user.
Subject	"Quotes for <origin city, ST> → <destination city, ST>"
Body	The message; default "Here are the quotes that you asked for. Let me know if you have any questions." Reference number of the first stop. A "View quotes" link.
Preview	A **Preview** shows the e-mail before sending.
Link	Secure quotes page, with prices, where the customer can book.
Stop	**Stop sharing** (confirmation "Stop sharing these quotes?") ends access. Sharing again sends a new e-mail.

A **Copy link** option shares the quotes page without an e-mail; copying the link turns on view-only sharing of the quotes.

Carrier packet

EML-050 Carrier packet request

Trigger: **Request carrier packet**, **Cover & request packet**, or automatically when covering with an unapproved carrier and the account setting "request carrier packets" is on (sections 4.3 and 4.8).

Item	Content
Recipients	The carrier contacts chosen (1 to 10, each with an e-mail). Otherwise: "Choose a contact with an email."
Subject	" wants your latest carrier packet"
Body	The same line and "Upload your carrier packet" with the link.
Link	Secure packet page: insurance amounts, expiry date and documents.
Reply-to	The user who asked.
Resend	Allowed, also after the packet is completed.

Users and sign-in

EML-060 User invite

Trigger: an Owner invites a person in Settings, Users. The invite link exists only in this e-mail.

Item	Content
Recipient	The typed e-mail address.
Subject	" invited you to join "
Body	"Accept the invitation" link. "This invitation expires on ."
Expiry	14 days.
Resend	**Resend** renews the 14 days and sends again; the button then shows "Sent" and the message "Invite resent!".
Reply-to	The inviter.

EML-061 E-mail address verification

Trigger: a user changes their login e-mail on their profile. The new address is not used until verified.

Item	Content
Recipient	The new address.
Subject	"Confirm your new email address"
Body	"Someone asked to use as the login email of an existing 10-4 TMS account. If that was you, sign in with your current email and confirm:" with a link. "The link expires in 24 hours. If you did not ask for this, ignore this email; nothing changes."
Rule	The user must be signed in as the same account to confirm. If the address is taken meanwhile: "Account already exists".
Reply-to	None.

EML-062 Password reset

Trigger: **Forgot password?** on the sign-in page.

Item	Content
Recipient	The login address. The page always answers the same way, so nobody can find out which addresses have accounts.
Subject	"Reset your password"
Body	"We received a request to reset the password for *." A "Reset your password" link. "The link expires in 60 minutes. If you did not ask for this, ignore this email; your password does not change."*
After reset	All other sessions are signed out. The link stops working if the login e-mail or the password changes meanwhile.

EML-063 Customer portal sign-in link

Trigger: a customer contact asks to sign in on the company's customer login page (sign-in link rules: POR-005).

Item	Content
Recipient	Only a contact whose customer has portal login on. Others get no e-mail but see the same answer.
Subject	"Log in to "
Body	"Use the link below to log in to ." A **Log in** link. "This link expires in 15 minutes and works once. If you didn't ask for it, you can ignore this email."
If the contact is unknown at click time	"We don't recognize that email address."

E-mails that are not sent by the system

- **Credit request.** The "Request credit" button opens the user's own mail program with a prepared message to the company's credit request addresses (Settings, Accounting).
- **Past-due reminders.** Weekly past-due statements to customers are not in the first version.
- **Driver text message** (EML-025) and **carrier paperwork** into 10-4's accounting mailbox (EML-026).
- **Support requests** and QuickBooks's own payment links.

Who can do what

Action	Owner	Member	Customer	Carrier
Send BOL, rate confirmation, invoice, statement, quote, packet request	Yes	Yes	No	No
Invite users, resend invites	Yes	No	No	No
Change the reply-to and Cc lists	Yes	No	No	No
Request a sign-in link or password reset	Yes	Yes	Yes	No
Open e-mail links	n/a	n/a	Yes	Yes

6. Documents

> **In short:** The system builds six printable PDF documents: the Bill of Lading (BOL), shipping labels, the customer rate confirmation, the carrier rate confirmation, the customer invoice and the customer statement. It keeps them current as the load changes and e-mails them (contents of the e-mails: section 5). Each shipment has a Documents page where reps see every document, upload proofs of delivery (POD), carrier bills and other files, and download anything. Reps and Owners use these screens; customers and carriers receive documents by e-mail or secure link. This section is the home for PDF layouts (DOC IDs).

Rules for all generated documents

DOC-001 Generated documents

BOL, labels, customer rate confirmation, carrier rate confirmation, customer invoice and customer statement are built by the system.

- Each is a PDF on US Letter paper (4×6 labels excepted), built from the load's current data. The PDF is kept so every user sees the same file; a new file replaces the old one when the data changes.
- Footer of the BOL, customer rate confirmation and carrier rate confirmation: "© 10-4 TMS · All product names, logos, brands, trademarks and registered trademarks are property of their respective owners." The invoice footer is the same sentence without the "© 10-4 TMS ·" start. Labels have no footer.
- One plain sans-serif font; carrier and broker signatures on the carrier rate confirmation use a handwriting-style font.
- Money is shown as "$1,500.00", weights as "10,044 lb", dimensions as `40" L x 45" W x 48" H`. The country "USA" is printed in grey after the postal code.
- Logos: the BOL and labels show the **customer's** logo; the customer rate confirmation, carrier rate confirmation and invoice show the **broker's (10-4's)** logo. A logo is a PNG, JPEG, WebP or GIF up to 5 MB (set on the account and customer screens, sections 4.10 and 4.7).
- No document shows barcodes in the first version.

DOC-002 When documents are created and refreshed

Trigger	What happens
Booking a shipment	The BOL, the half-letter labels and the customer rate confirmation are generated in the background within a few seconds. A draft customer invoice record is created (section 4.5).
Editing the shipment, changing Cost & Price lines, canceling, restoring a canceled load, changing the customer	The BOL, labels and customer rate confirmation are refreshed in the background.
Covering a truckload	The carrier rate confirmation is created when it is sent (section 4.3).

Trigger	What happens
The carrier signs, or the rate confirmation is re-sent	The carrier rate confirmation is refreshed. A separate copy of the signed version is kept (DOC-009).
Sending an invoice, recording a payment, editing invoice charges	The customer invoice PDF is refreshed.
Sending a statement	The statement is built at that moment.
Pressing "Regenerate document" in a viewer	The document is rebuilt at once from current data.

- Opening the Documents page or a viewer never creates or changes a document. A missing document shows "Not available" with the "Regenerate document" button.
- If nothing printed on a document changed, the existing file is kept.
- Generating a document never changes the load's "last updated" time and never shows a "load was changed" warning to other users.
- If the background build fails, the page stays usable and a rep can press "Regenerate document".
- A canceled load keeps its documents.

Bill of Lading (BOL)

DOC-003 BOL contents

Title "STRAIGHT BILL OF LADING – NON NEGOTIABLE". One page, top to bottom:

Block	Contents
Header	The customer's logo on the left. The title. "BOL " ("BOL" in grey). A dashed box on the right with "PRO label here" for a hand-applied PRO sticker; with a PRO number, "PRO " is printed under it.
Equipment line	The equipment (for example "Dry Van"); "LTL" for less-than-truckload. When the setting Settings > Customers, "Hide TL carrier names" is off, "Carrier: " follows. 10-4's current setting hides it.
"PICKUP" and "DELIVERY" columns	Each with date (for example "Fri, Oct 2"), time window ("8:00 AM — 4:30 PM"), company (bold), street, city, state, postal code. "PICKUP" is the first stop, "DELIVERY" the last; on loads with more than two stops only these two are printed. A chip "Residential pickup" or "Residential delivery" appears for a residence.
Billing box	Heading "BILL TO", for example "BILL THIRD PARTY PREPAID TO". Then the billing company with the billing e-mail, and the billing address.
Items table	Columns "Units", "Pkg type", "HM", "Description (said to contain)", "Dims", "Weight". One row per handling unit (quantity, package type, "X" in HM when hazardous, description, dimensions, weight of the whole line), then a bold totals row with total units and total weight.

Block	Contents
Legal paragraph	"Freight moving under this Bill of Lading is subject to classifications and tariffs established by the carrier and are available to shipper upon request. This notice supersedes and negates any claimed oral or written contract, promise, representation, or understanding between parties, except to the extent of any written contract signed by both parties to the contract. Any unauthorized alteration or use of this Bill of Lading or the tendering of this shipment to any carrier other than that designated by company, may VOID company's obligations to make any payments relating to this shipment and VOID all rate quotes. All shippers, consignors, consignees, freight forwarders or freight brokers are jointly and severally liable for the freight charges relating to this shipment. Carrier certifies only CARB-compliant equipment will be dispatched on California highways or railways."
Reference strip	Three empty boxes to fill by hand: "LOAD", "TRAILER", "SEALS".
Shipper box	Title: the pickup company. The declaration: "I hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name and are classified, packaged, marked and labeled/ placarded and are in all respects in proper condition for transportation according to applicable international and national government regulations." "SHIPPER SIGNATURE" and "DATE" lines.
Driver box	Title "Driver". The text: "Carrier acknowledges receipt of packages and required placards. Carrier certifies emergency response information was made available and/or carrier has the DOT emergency response guidebook or equivalent document in the vehicle." A cell "UNITS RECEIVED". "DRIVER SIGNATURE" and "DATE" lines.
Consignee box	The delivery company, "RECEIVED BY (PRINT NAME)", "CONSIGNEE SIGNATURE", "DATE".
Footer	As in DOC-001.

- Freight class, NMFC and per-piece weights are not printed.

DOC-004 BOL viewer

The page "BOL" opens from the BOL tile of the Documents page and from links on the shipment page.

- Header: the title "BOL", "BOL " (link to the shipment), carrier name, equipment with icon, "PRO " when known, customer name (link), and a small timeline from origin city and pickup date to destination city and delivery date.
- Footer: file name "BOL-.pdf", a download button and "Regenerate document". The BOL cannot be removed here.
- A BOL not ready shows a loading skeleton; a missing one shows "Not available" with a regenerate button.
- Close with the X (accessible name "Close document") or the link "Documents".

DOC-005 Sending the BOL

Who gets the BOL e-mail and what it says: EML-010 and EML-011. It attaches "BOL-.pdf" and "Labels-.pdf" and links to both.

- A share banner above the BOL page (account users only):

Situation	Text	Button
BOL sent and still current	"Sent " with a green check	green outlined "Resend"
BOL changed since the last send	"Send updated BOL" with an orange warning	orange outlined "Send"
Never sent	"Send BOL"	"Send"

- The banner is hidden when there are no recipients, the load is canceled, the load has been picked up, or no carrier is assigned.
- Recipients are the stop e-mails and the e-mails already shared with, without duplicates.
- A re-send carries "The BOL for this shipment has changed. Please disregard previous BOL."; a first send does not.
- Messages: "BOL shared", "Failed to send BOL", "Failed to regenerate document".

Shipping labels

DOC-006 Label contents

One label per piece. The number of pieces is the load's total handling units (at least 1, at most 100). Each label shows:

Block	Contents
Top row	The equipment (left) and the customer's logo (right).
"FROM"	A black tag "FROM", then pickup company, street, city line (small text).
"TO"	A black tag "TO", then delivery company, street, city line and the stop's phone number (larger text).
Right column	"BOL " in bold. "TOTAL lb". A very large destination code: the first four letters of the delivery city in capitals (for example "Royse City" prints "ROYS"). A black box with the number of pieces and the caption "PIECES" ("PIECE" when there is one).

- All labels of a load show the same total number of pieces (no "1 of 4" counter). No footer and no barcode.

DOC-007 Label sizes and the Labels page

- Two sizes: "Half-letter" (default) and "4×6".
- "Half-letter": a US Letter sheet holds two identical labels stacked, one sheet per piece. "4×6": one label per 4 × 6 inch page, same content scaled to fit.
- The Labels page header has the title "Labels", the carrier and equipment, "BOL ", the customer and the origin/destination timeline.
- A toolbar has the field "Size" (options "Half-letter" and "4×6") and the blue button "Download labels".
- A preview grid shows up to 6 sheets (2 columns for half-letter, 3 for 4×6); the download always contains all pages.
- The footer shows "Labels-.pdf", a download button and "Regenerate document".

- Changing the size never creates a label by itself. If none exists for that size, the page shows "Not available" and the regenerate button creates it. The chosen size is not remembered.

Customer rate confirmation

DOC-008 Customer rate confirmation contents

Title "Rate Confirmation". One page for the customer.

Block	Contents
Header	"Rate Confirmation", "BOL ", the broker logo on the right.
Equipment card	"EQUIPMENT": equipment and total length (for example "Dry Van 7' L"). "TOTAL WEIGHT": for example "10,044 lb". When the Settings > Carriers switch "Show shipment value on rate con" is on, "Shipment value " is printed under it. 10-4's current setting is off.
Broker contact (right)	Broker name, "MC-", the booking rep's name, phone and e-mail.
"Shipment for"	The customer's billing company, street and city line, and the customer contact's name, phone and e-mail (left out if the load has no contact).
"Trip details"	One numbered card per stop: company, street, city line, date (for example "Fri, Oct 2") and time window. A "PICK UP" row lists " - " and the weight of the items picked up there. A "DROP OFF" row does the same for items delivered there.
"Pay to"	The broker's payment company, payment e-mail and address. When the account has payment settings, the caption "Electronic payment (ACH)" with rows "Bank", "Routing" and "Account" and the payment instructions text; without payment settings this part is left out.
"Agree to pay"	A box "AGREED ALL-IN AMOUNT" with the load's price (the total of the shipment's price lines), then "SIGNATURE" and "DATE" lines left blank for the customer.
Footer	As in DOC-001.

- It never shows cost, profit or margin.
- It is on the Documents page under the tile "Customer Confirmation" and in the viewer titled "Customer confirmation", file name "Customer-Rate-Confirmation-.pdf", with its own "Regenerate document" button.
- It is created for the customer's reference. Reps download it from the viewer and send it as needed; the customer can also see it through the secure shipment page or the customer portal (section 4.11). The system does not e-mail it automatically.

Carrier rate confirmation

DOC-009 Carrier rate confirmation contents

Titled "Load & Rate Confirmation". Two pages, one PDF per carrier assignment, sent as an e-mail attachment (EML-020, section 4.3).

Page 1

Block	Contents
Header	"Load & Rate Confirmation", "BOL ", the broker logo on the right.
Carrier card (left)	" dba " (just the name when there is no legal name), address, "MC", "USDOT ", and the dispatcher's first name in capitals, phone and e-mail.
Load grid (right of the card)	"EQUIPMENT" with equipment and length ("7' L"); weight in lb and distance in mi; "DRIVER NAME" and "DRIVER PHONE"; "TRACTOR" and "TRAILER". Driver, tractor and trailer are blank until the carrier signs or a rep enters them.
Broker contact (right)	Broker name, "MC-", the rep who covered the load, with phone and e-mail from Settings > Carriers > Rate cons (otherwise the rep's own).
"Trip details"	The stop cards as on the customer rate confirmation.

Page 2

Block	Contents
"Terms and Fees"	The first bullet "Exclusive use only" (or "Partial use"), an optional "Note: " from the cover form, then 10-4's rate confirmation terms in two columns (DOC-010).
"Payment"	A card with "AGREED ALL-IN AMOUNT" and the total of the carrier's charges, and a strip with the broker e-mail. No breakdown of charges.
Acceptance and signature card	"The undersigned hereby acknowledges as correct and accepts the referenced shipment on behalf of . It is agreed that the charges indicated above include all costs and fees in connection with the shipment as described. You also agree to the Carrier Terms & Conditions at . Invoicing by the carrier and payment by the broker constitutes acceptance of this agreement. By signing, this creates a contract carriage shipment." With no carrier agreement, the "at " part is left out. On the right: the broker's billing address and logo.
Signature row	"SIGNATURE" (the carrier's typed name in handwriting font) and "DATE" (the date the carrier signed, "M/D/YYYY"). "BROKER" (the covering rep's name in handwriting font) and "DATE" (the date the rate confirmation was sent).
Footer	As in DOC-001.

- Until the carrier signs, the carrier signature and date are blank. After a change to a signed rate confirmation, the old signature no longer prints.
- The amount follows the carrier's cost lines and never shows the customer price.
- Multi-stop loads list every stop. Less-than-truckload loads have no carrier rate confirmation.
- A copy of each signed version is built from exactly what the carrier saw at signing time and kept (RCF-014, RCF-018).
- File: "Carrier-Rate-Con-.pdf". It appears on the Documents page in the carrier's section as the tile "Rate Confirmation" and on the rate confirmation page.

DOC-010 Terms & Fees text

Terms & Fees is the account's "Rate con terms" setting (Settings > Carriers > Rate cons, section 4.10), carried over unchanged from 10-4's current text; its content, saving at cover and the "Exclusive use only" / "Partial

use" bullet rule are in RCF-023. It prints on page 2 in two columns in small type and in two columns on the carrier's confirmation page (section 4.3). Changing it is a setting change by an Owner.

Customer invoice

DOC-011 Customer invoice contents

Title "INVOICE". One page, in two looks: a draft and a sent invoice.

Block	Contents
Header	The broker logo on the left. "INVOICE" on the right. "Invoice# " (starts as the BOL number, can be changed). For a sent invoice: "Invoice date <M/D/YYYY>".
Broker	Broker name and address. "BILLING QUESTIONS" with the billing phone and e-mail.
"BILL TO" card	The customer's billing company, street, city line and billing e-mail, a rule, then "BOL ".
"SHIPPER" and "CONSIGNEE"	The first and last stop: company, street, city line.
Items table	Columns "Units", "Pkg", "HM", "Description (said to contain)", "Weight". A bold totals row first ("Total units", total weight), then one row per handling unit with dimensions after the description.
Equipment and stops	The equipment and "Distance mi". A small route with numbered stops; on a sent invoice each stop shows its date and, when known, "Picked up" or "Delivered".
Payment card	"Make payment via:". The column "Electronic payment (ACH)" with "Bank", "Routing" and "Account" appears only when the account has payment settings. The column "Check" with the payment company and address appears when a payment address exists. "Send remittance instructions to:" with the payment e-mail. The payment instructions text. "Please include invoice# with your payment".
Amounts (right of the payment card)	One row per charge: description and amount (for example "Freight"). "Total amount due" with "USD" and the balance after payments (after a partial payment, the remaining balance). "Due by": on a draft "Date will be finalized when invoice is sent", on a sent invoice the due date "MM/DD/YYYY". "Invoice#".
Footer	As in DOC-001.

- **Draft look:** a large grey slanted "DRAFT" stamp in a frame across the upper page until the invoice is sent. A sent invoice has no stamp.
- Charge rows follow the invoice charges, which follow the load's price lines (section 4.5).
- File name: "Invoice--from-.pdf".
- The Documents page shows the tile "Customer Invoice" under the customer only when the invoice exists and is not canceled, and the load is a truckload that is Scheduled, In transit, Delivered or Canceled, or is less-than-truckload.
- The invoice page shows the PDF with "Regenerate document" and "Remove document" (cancels an unsent invoice). Viewing never creates the invoice.

DOC-012 Who receives the invoice

- Sending an invoice (section 4.5) e-mails every billing address of the customer plus the account's invoice copy addresses, each once; contents of the e-mail: EML-030 (subject "Invoice from ", "View invoice" link to the secure invoice page, section 4.11). The invoice PDF is attached. Reply-to is the sender. "Resend" sends it again to all recipients.
- **"Combine PDFs (bill and POD)"** (customer setting, section 4.7; CUS-015): when on, each proof of delivery is also attached as its own file next to the invoice PDF. When off, only the invoice PDF is attached. The files are never merged into one PDF, and the BOL is not attached.

Customer statement

DOC-013 Statement contents

A statement lists a customer's unpaid invoices.

Block	Contents
Header	The broker logo or name, the title "Statement" and the date.
"Bill to"	The customer's name and billing address.
Aging summary	"Current", "1-15 late", "16-30 late", "31-60 late", "61+ late", "Total open".
Invoice table	Columns "Invoice #", "BOL", "Invoice date", "Due date", "Origin", "Destination", "Amount", "Balance", "Aging".

- "Aging" reads "Open", "Late 15", "Late 30", "Late 60" or "Late 61+". Rows with an open dispute are marked " (disputed)".
- Money as "$1,500.00"; dates as "MM/DD/YYYY".
- Only invoices that were sent and still have a balance are listed (no drafts, no fully paid), ordered by lateness, then due date. No bank details.
- File name: "Statement--.pdf".
- A statement is not shown on the shipment Documents page; it belongs to the customer (sections 4.5, 4.7).
- A customer without open invoices has no statement: "This customer has no open invoices."

DOC-014 Making and sending a statement

- The button "Download statement" (footer of a customer's invoice list) builds the statement at once and downloads it. If the unpaid invoices have not changed since the last statement, the same file is reused; a new invoice or payment makes a new statement and replaces the old one. A statement is never reused just because it is recent.
- The customer's Invoices tab has a "Statement" card with "Send billing contact an email with attached statement PDF." and a blue "Send statement" button. It shows only when the customer has open invoices. Without a billing e-mail the card says "Add a billing email address to send a statement email."

- "Send statement" opens a small window "Email statement": "Send an email with statement to ", buttons "Not now" and "Send email". The e-mail (EML-032) has the subject "Statement from ".
- Messages: "Statement email sent", "Something failed while sending the statement email.", "This customer has no open invoices."
- The card shows "Last sent by ".
- Any account user can download and send a statement.

Shipment Documents page

DOC-015 Documents page

The Documents page gathers every file of one shipment. It opens from the "Documents" chip in the shipment header, from the back links of the BOL, Labels and POD pages, and from the "Upload POD" and "View POD" buttons on the shipment page.

- A dark full-screen page over the application. Browser tab title "Documents BOL ".
- Top left: a back arrow ("back", or "< Documents" on viewers). Top right: the close X (accessible name "Close document"), which returns to the shipment.
- Title row: "Documents" left, "Shipment " right.
- Sections top to bottom: the customer section, one section per carrier on the load, "Misc". Nothing is paged or filtered.
- Each document is a tile: a first-page thumbnail (8.5 × 11 proportion), a caption and a download icon in the caption (accessible name "Download
